number of men, who pay amongst them, say 1,000*l.* a-year in taxes on commodities. Now, if the taxes that are at present paid by the labourers be repealed, it follows that those imposed on their employers must be equally increased; so that the manufacturer in question having 1,000*l.* more to pay in taxes after the change takes place, will of course have 1,000*l.* less to lay out on wages. More cannot be required to show how futile it is to attempt to improve the condition of the labourers by diminishing the taxes that fall on them to increase those falling on their employers, or on those who buy the produce of their industry.

Direct taxes on property have been the curse of every country into which they have been introduced. To evade them, people that are not poor counterfeit poverty; some of the most powerful incentives to industry and economy are in consequence destroyed, at the same time that inferior stock, machinery, &c. are made use of. But how objectionable soever, taxes on income are decidedly preferable to taxes on property only: both are bad, but the former are the least mischievous of the two.

In order to furnish the means of defraying the cost of the war begun in 1793, Mr. Pitt proposed in 1797 to treble the amount of the assessed taxes, or duties on houses, windows, horses, carriages, &c.; but this plan not having answered the expectations of its projectors, it was next year abandoned, and a tax on income substituted in its stead. According to the provisions of the Act imposing this tax, all incomes of less than 60*l.* a-year were exempted from assessment; an income of from 60*l.* to 65*l.* was taxed one hundred and twentieth part; and the rate of duty increased through a variety of gradations until the income reached 200*l.* or upwards, when it amounted to a tenth part, which was its utmost limit; a variety of deductions being at the same time granted on account of children, &c. The commissioners, to whom the assessment of this tax was entrusted, were chosen by the freeholders of counties and the electors of boroughs, nearly in the same way as their representatives in Parliament, only that a smaller qualification was sufficient to enable any one to be elected a commissioner. The services of the commissioners were gratuitous; and they were sworn to secrecy with respect to the affairs of individuals. They were authorized to call for returns from every person whose income they supposed to exceed 60*l.* a-year; and in the event of their being dissatisfied with these returns they were empowered to call for written explanations, and ultimately for the oath of the party. But this examination was rarely necessary, except in the case of incomes derived from wages, from capital employed in manufacturing and commercial businesses, or from the interest of loans; the rental of landlords being, in most cases, learned from the terms of the agreements with their tenants; while the profits or incomes of the latter were estimated in England at three-fourths, and in Scotland at half the rent. The commissioners were assisted or rather overlooked, by the tax surveyors, appointed by Government, who were required to see the provisions of the Act strictly enforced, and whose duty it was to scrutinize all returns of income, to challenge such as they considered fraudulent, to object to the deductions allowed by the ordinary commissioners, and to bring the matter under the review of the commis-

donors of appeal, whose sentence was final. Infinite fraud and evasion were practised, and nothing could be more arbitrary than the rule for estimating farmers' incomes. But the exigencies of the country at the time made this and its other defects be little thought of; and on the whole the provisions of the Act were enforced better than could have been anticipated.

This tax was repealed in 1802, after the peace of Amiens, having produced, at an average, about five millions and a half annually.

In 1803 the income-tax, under the name of property-tax, was again revived. The assessment began as before, on incomes as low as 60*l.* a-year, and gradually increased until the income reached 150*l.* a-year, when it amounted to 5 per cent., which was its highest rate. An addition was made to this tax in 1805; and in 1806, during the short-lived administration of Mr. Fox and Lord Grenville, the assessment was raised to 10 per cent. on all incomes, however small, arising from land or capital. Professional incomes under 50*l.* were exempted from the tax, and incomes of that sort exceeding 50*l.* and under 150*l.*, the limit at which they became subject to the full assessment of 10 per cent., were allowed deductions, varying inversely as their magnitude. This tax was finally repealed in 1816, and would hardly have been submitted to, but for the well-founded conviction that it was indispensable for carrying on the desperate struggle in which we were then engaged. We subjoin from a Parliamentary paper, presented to the House of Commons in 1823, a return of the total gross and nett assessment to the property or income-tax, for the year ending 5th April, 1815.

The present Income-tax Act charged under the 5 and 6 Victoria, c. 35, (22 June, 1842) imposes a duty of 7*d.* per pound sterling, (2*l.* 18*s.* 4*d.* per cent.,) on all incomes, from whatever source derived, of 150*l.* a-year and upwards. The incomes or profits of the occupiers of land, &c. are assumed by the Act to amount in England to a half, and in Scotland to a third part of the rent; and are assessed on that hypothesis. We subjoin an official

Schedule A. comprises in this, as in the former Act, the assessment upon lands, houses, tithes, manors, mines, quarries, canals, ironworks, &c. Taking the returns as they stand, they must have been assessed in England and Wales as follows:—

|                                                                                                                                            | £.          |
|--------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| Schedule A., having produced 2,150,412 <i>l.</i> 10 <i>s.</i> 9 <i>d.</i> , at 7 <i>d.</i> per pound, must have been assessed on . . . . . | 73,728,430  |
| „ B, 298,763 <i>l.</i> , at 7 <i>d.</i> per pound, must have been assessed on . . . . .                                                    | 10,243,303  |
| „ C., 812,982 <i>l.</i> 13 <i>s.</i> 1 <i>d.</i> ditto ditto . . . . .                                                                     | 27,873,691  |
| „ D., 1,466,985 <i>l.</i> 9 <i>s.</i> 8 <i>d.</i> ditto ditto . . . . .                                                                    | 50,296,645  |
| „ E., 260,657 <i>l.</i> 11 <i>s.</i> 3 <i>d.</i> ditto ditto . . . . .                                                                     | 8,936,830   |
|                                                                                                                                            | 171,078,899 |

The rents payable by the occupiers assessed under Schedule B must have amounted (as they were charged only on the half) to 20,486,606*l.* And we have already seen that the total landed rental of England and Wales at the present moment is about double that amount (see vol. i. p. 553). By far the greatest increase since 1815 has been in houses, warehouses, factories, and property of that description.

Of the total amount of income assessed to the tax, the portion charged under Schedules C and E, amounting to 36,810,521*l.*, consisting principally of dividends on the public debt, and of salaries and pensions to public servants, is of quite a different character from the other portions, and is not to be regarded in the same point of view. It is not an original or independent, but a secondary or derivative income, and consists, in fact, of a portion of the income of others transferred to the holders by means of taxation.

*Land Tax.*—The circumstances that gave rise to this tax have been already noticed.—(*Ante*, p. 393.) The valuation according to which it is now assessed, was fixed in 1692; when it was found that a charge

\* The amount of duty collected in Scotland is not distinguished in schedules.

of 1*s.* per pound on the rental of the country produced nearly 500,000*l.* No subsequent change has been made in this valuation. The tax, which was annually voted, usually amounted to 4*s.* per pound of the valued rent. In 1798 it was made perpetual at that rate, leave being, at the same time, given to the proprietors to redeem it.

The land tax has always been very unequal. When imposed, the proprietors friendly to the Revolution returned their estates at a much higher value than those attached to the House of Stuart. The different degrees of improvement that have since taken place in the various districts of the country have, in some instances, tended to correct the inequalities in the original imposition of the tax, but their more common effect has been to increase them.

*Assessed Taxes.*—These form the fourth great head of revenue. They include the duties on windows, servants, horses, dogs, carriages, armorial bearings, game, &c. The house duty, that used to be one of the principal items in the assessed taxes, was repealed in 1833. A hearth-tax, or duty proportioned to the number of fire-places in a house, was established in this country at a very early period. But, owing to its being necessary to the assessment of the tax that the government officers should be admitted to view the inside of each house, the hearth tax became exceedingly unpopular, and was repealed by the stat. 1 Will. and Mary, c. 10. This statute declares hearth-money to have been, “not only a great oppression to the poorer sort, but a badge of slavery upon the whole people, exposing every man’s house to be entered into, and searched at pleasure, by persons unknown to him; and, therefore, to erect a lasting monument of their majesties’ goodness in every house in the kingdom, the duty of hearth-money was taken away and abolished.”

But, six years afterwards, “the prospect of this monument of goodness was,” to use Blackstone’s words, “somewhat darkened,” by the passing of an act (7 Will. III. c. 18) laying a duty on all inhabited houses, except cottages, and also on windows. These duties were afterwards considerably increased. They have, however, been materially modified within the last few years; and the existing window tax cannot, nor could the house tax, previously to its repeal, be said to be oppressive. Indeed, out of 2,850,937 inhabited houses in Great Britain, in 1831, only 442,482, or not a *sixth part* of the entire number, paid duty in 1833. All houses below 10*l.* a-year of rent were exempted from the duty; the rate of charges on those that were assessed being 1*s.* 6*d.* per pound on houses worth from 10*l.* to 20*l.* a-year; 1*s.* 3*d.* per pound on those worth from 20*l.* to 40*l.*; and 2*s.* 10*d.* per pound on those worth 40*l.* and upwards. The assessed taxes do not extend to Ireland. The cost of their collection amounts to rather more than 5 per cent.; but latterly it has been mixed up with the expense of collecting the property tax, which is much less considerable.

The house tax being assessed according to the rent, it frequently happened that private houses, shops, and taverns in towns, were assessed in a larger sum than the finest houses of the nobility and gentry in the country. There was not, however, any injustice in this; for, in point of fact, had any attempt been made to let the latter, they would rarely have found a tenant, or brought any rent. This apparent in-

equality afforded, however, a convenient topic for declamation, and for raising an outcry against the tax, which was, in consequence, repealed in 1834.\*

The real cause of the unpopularity of the house tax, and, indeed, of all the other assessed taxes, consists in their being direct; and, consequently admitting no disguise or concealment. Where duties are laid on imported articles, or on articles produced at home, through the intervention of the customs or excise, the duty is confounded with, and appears to form part of, the natural price of the commodity. No separate demand being made upon the consumer for the duty, it escapes his recollection, so that the article he receives seems the full equivalent of what he pays. But the assessed taxes cannot be so mixed up with other things. And as every one has an extreme repugnance to part with money without receiving some tangible, or sensible equivalent, such taxes are always very unpopular, and seldom escape being considered as oppressive, even when they happen to be most moderate.

*Revenue and Rates of Postage.*—In 1838 the post-office of the United Kingdom produced a gross revenue of 2,346,278*l.*, and a nett revenue, after deducting the expense of collection, of 1,676,522*l.* This large revenue was derived from rates of postage, varying with the distance according to which letters were conveyed, but so that at an average they amounted to about 7*d.* or 7½*d.* for a single letter. But the fact that the post-office revenue had continued nearly stationary during the twenty years ending with 1838, notwithstanding the vast increase in that period of population and of the intercourse between the different parts of the empire, was a conclusive proof that the rates of postage had been carried to a vicious excess; and that in the arithmetic of the post-office, as well as of the customs, two and two, instead of always making four, sometimes make only one. The effectual reduction of these rates was, therefore, urgently required, not only because of the importance to a commercial and manufacturing community of having the charge for the conveyance of correspondence fixed at a moderate amount, but because it was all but certain that moderate rates of postage would be more productive of revenue. It did not, however, follow that because an average charge of 7*d.* or 7½*d.* each on all letters conveyed by post was very decidedly too much, that the plan for making an invariable charge of 1*d.*, whether a letter were conveyed one mile or 1,000 miles, or by itself or with 50,000 others, should have been adopted. This was to rush from one extreme to another, and to endanger a considerable amount of revenue, without any equivalent advantage. It must, no doubt, be admitted that the proposal for a uniform penny rate of postage had many recommendations in its favour. Being calculated at once to obviate trouble and save expense, it could not fail to be acceptable (what reduction of taxation is not?) to a large portion of the public, particularly to persons engaged in business. We believe, however, that the scheme was more indebted for its popularity to the oppressiveness of the old rates of postage than to any intrinsic merits of its own. Had these been reduced four or five years previously to a reasonable amount, that is, had letters of 1 oz. weight coming from Scotland or Ireland to London been reduced to 6*d.*, and

\* Re-imposed in 1851, by 14 and 15 Vict. cap. 36.

other letters in proportion, and mercantile circulars been allowed to pass under covers open at the ends at 1*d.* or 2*d.* each, we venture to say that the clamour for a uniform rate of penny postage would not have made any way. But in this, as usually happens on similar occasions, those who delay to make reasonable and necessary concessions at the outset are in the end compelled to concede a great deal more than would at first have been satisfactory. This, at all events, has been eminently true in the present instance. The clamour for a uniform penny rate became too powerful to be resisted; and parliament, whether it were so inclined or not, was obliged to lend its sanction to the measure. And under the provisions of the Act 2 and 3 Vict., cap. 52, it has been enacted that all inland letters, without regard to the number of enclosures, or the distance conveyed, provided they be paid when posted or despatched, shall, if not exceeding  $\frac{1}{2}$  oz. weight, be charged 1*d.*; 1 oz. 2*d.*; 2 oz. 4*d.*; 3 oz. 6*d.*; and so on; 2*d.* being added for every additional ounce up to 16 oz., beyond which (with the following exceptions) no packet, whether subject to postage or not, is received:—

1. Parliamentary petitions and addresses to Her Majesty.
2. Parliamentary proceedings.
3. Letters and packets addressed to or received from places beyond sea.
4. Letters and packets to and from public departments, and to and from public officers that formerly franked by virtue of their offices.
5. Deeds, if sent open, or in covers open at the sides. They may be tied with string and sealed, in order to prevent inspection of the contents; but they must be open at the sides, that it may be seen that they are entitled to the privilege.

With these exceptions, all packets above the weight of 16 oz. will be immediately forwarded to the Dead Letter Office.

All parliamentary and official franking has been put an end to; but members of either house of parliament are entitled to receive petitions to parliament free of charge, provided such petitions be sent in covers open at the ends, and do not exceed 6 oz. weight.

To facilitate the working of the plan, envelopes and stamps for letters of different weights are furnished by the post-office, and have been widely distributed.

Such are the more prominent features of the new system; and none can deny that it has the recommendations of simplicity and cheapness in its favour, and that it has greatly facilitated correspondence. But it may nevertheless be doubted whether its adoption was expedient. It is certainly very convenient for merchants, bankers, middlemen, and retail dealers, to get letters for 1*d.* that previously cost them 7*d.* or 7½*d.*; but their satisfaction is not the only thing to be attended to in forming a fair estimate of the measure. The public exigencies require that a sum of more than fifty millions a year should be raised one way or other; and so long as we are pressed by an unreasoning necessity of this sort, it is not much to say in favour of the repeal or diminution of any tax, that those on whom it fell with the greatest severity are

delighted with the reduction. Sugar has in England become a necessary of life, and its consumption, to say the least of it, is quite as indispensable to the bulk of the people, and especially to the labouring classes, as the writing of letters. But would it, therefore, be a wise measure to repeal the duty on sugar, or to reduce it to 1s. a cwt.? It has been alleged, indeed, that taxes on the transmission of letters are objectionable on principle, and should therefore be repealed, independently altogether of financial considerations. But it is easier to make an allegation of this sort than to prove it. All taxes, however imposed, if they be carried (as was the case with the old rates of postage), beyond their proper limits, are objectionable; but provided these be not exceeded, we have yet to learn why a tax on a letter should be more objectionable than a tax on the paper on which it is written, on the food of the writer, or on fifty other things. But whether the measure were originally judicious or otherwise, any proposal for its modification would now be exceedingly unpopular, and would have but little chance of being adopted.

The nett post-office revenue of the United Kingdom, after deducting the expenses of collection, amounted, in 1852, to 1,106,764*l.*, of which above 82,000*l.* was derived from the commission on money orders. The expenses of collection in Great Britain were 49*l.* 19*s.* 0*d.* per cent., and in Ireland 96*l.* 4*s.* 2*d.* per cent. of the gross receipts!

*Collection of Taxes.*—Taxes in Great Britain are almost wholly collected by government officers, paid by salaries. The customs' duties, the excise duties, and the duties on stamps, with the assessed taxes, are each under the management of a particular department, having at its head a board of commissioners with various classes of inferior officers. The post-office revenue is managed by a postmaster-general, and a principal secretary. The heads of the different revenue departments correspond with, and receive their instructions from, the treasury, to which is committed the charge of supervising, controlling, and regulating all matters connected with the assessment and collection of taxes. The number of commissioners in the different revenue boards was formerly much greater than at present; and it is contended by some very high authorities that their number might still be advantageously reduced; and that the whole responsibility should rest with the head of each department. Various reforms and retrenchments have been also introduced into the subordinate departments, and not a few abuses have been rectified in the assessment and collection of most duties. Perhaps the only very material reforms that need now to be looked for in this department must arise rather from changes and modifications of duties, than from any changes in the plans under which they are charged and collected. The reduction of the existing duties on silks, tobacco, and tea, by taking away an overwhelming temptation to their clandestine importation, would enable a large saving to be effected in the customs' department, at the same time that it would be productive of various other beneficial consequences. In the excise there remains little to be amended; the system having received nearly all the perfection of which it seems capable.

I. *An Account of the Public Revenue of the United Kingdom in 1850, 1851, and 1852.*

N.B. See *ante*, pp. 22—26, for an account of the quantities of the different articles of foreign and colonial produce imported into, and exported from, the United Kingdom in 1850, of the quantities of such produce entered for home consumption, and the nett revenue accruing thereon in each of these years. See also page 27 for an account of the gross and nett customs' duty collected at each custom-house of the United Kingdom, in 1850 and 1851.

II. Account of the Rates of Customs' Duty imposed upon the principal Articles brought from Foreign Countries, subject to Duties on their Importation into the United Kingdom, on the 1st of January, 1854.

## SECT. 2.—Public Expenditure.

THE public expenditure is made up, as any one may readily imagine, of a vast variety of items. In most countries with a maritime frontier, the cost of the army and navy is the most important item, and it, no doubt, occupies a very prominent place in the British budgets. But the most important article by far in our expenditure is the interest of the National Debt, or of the various sums borrowed from and due to the public creditor. The expense of the civil government of the country is not so great, perhaps, as might have been expected.

*An Account of the Public Expenditure of the United Kingdom in 1850, 1851, and 1852.*

| EXPENDITURE.                                                                                                                                                           | 1850       |            | 1851       |            | 1852       |            |

*Mem.*—For the purpose of continuing the statement upon the same principle throughout, it has been necessary to exclude the Receipts from and Payments to the Trustees of Naval and Military Pensions in the Years previous to 1820. The Annuity paid to the Bank of England in those Years, under the Act 4 Geo. IV. c. 82, is included under the head of "Charges of the Debt," according to the system pursued in the Finance Accounts for the subsequent years. The Annuities charged on the Sinking Fund are also added to the Charge of the Debt.

The Advances and Repayments on account of Public Works are excluded from this Account for the Years previous to 1820, an alteration having taken place from that period in the mode of entering the Accounts, pursuant to the recommendation of the Finance Committee, by which those Advances and Repayments no longer appear in the Abstract, No. 4.

The Figures in the first Five Years of the period will not correspond with the printed Accounts to the extent of these alterations.

SECT. 3.—*Local Taxation and Expenditure.*

EXCLUSIVE of the taxes imposed for public purposes, a large amount of revenue is collected in Great Britain and Ireland for objects of local expenditure. This is principally effected by means of county rates, of which the poor rates form, in England and Wales, by far the most important item; they also include rates for the maintenance of gaols and houses of correction, the prosecution of criminals, the repair of roads, bridges, &c. In towns there are rates for defraying the cost of police, and of lighting, cleaning, &c. These different rates amount in the aggregate to a very large sum.

It has been the uniform intention of the Legislature, as evinced by the different Acts on this subject from the 22nd Henry VIII., cap. 5, down to the 55th Geo. III., cap. 51, that the county rates should fall equally on all sorts of property, whether real or personal. But the practical difficulties in the way of taxing stock in trade, profits, or monied property, having been found to be quite insuperable, the rates in question have been always, or almost always, defrayed by assessments on land, buildings, and other fixed property. The principle on which these have been assessed has varied in different parts of the country; and in some counties the assessments to the county rate were continued on the same footing for a very long series of years, notwithstanding great changes had taken place in the interim.\* In consequence, very striking inequalities in the amount of the assessment imposed on the different species of real property grew up in many places, and occasioned many well-founded complaints. But within the last few years these inequalities have been materially reduced. The land, no doubt, is still too heavily taxed, but the excess of taxation falling on it, as compared with that falling on houses and other immoveable property, is decidedly less now than formerly.

I. *Summary of the Expenditure of County Rates in England and Wales for 1792 and 1832, or for such other Year as could be obtained nearest to each Period under the subjoined Heads, with the Increase or Decrease of each.*—(Lords' Report of 1835 on County Rates, p. 275.)

Note.—The Returns from which the above Abstract is made, were obtained by the Poor Law Commissioners from the overseers of each parish or other place in England and Wales maintaining its own poor.

\* Mills, factories, mineral profits, mines, iron works, &c.

† Exclusive of 4,000 persons ascertained to have been travelling by railways and canals during the night of 6th June, 1841

The Poor Law Commissioners have laid before the House of Commons the following returns in regard to the local taxation of the United Kingdom. Though in various respects incomplete, they present in a condensed form almost all the existing information on the subject.

*Amount of Money levied for Poor Rates in England and Wales, for each of the Years ended Lady-day, 1826, 1833, and 1841, distinguishing the Amount levied on Landed Property, Dwelling-houses, and "all other kinds of Property."*

| Years ended Lady-day, | AMOUNT OF MONEY LEVIED BY ASSESSMENT. |                      |                  |                      |                     |                      | Total Amount Levied. |

|                                                                                                                                                                                                                                                                                       | 13,078,083 |    |    |           |

And allowing for the various items omitted in these accounts, it may be safely concluded that the local taxation of the United Kingdom exceeds 14,000,000*l.* a-year.

The local taxation of Ireland principally consists of the county cess, or the sums annually raised in the different counties by Grand Jury presentments for different purposes. From 1829 down to 1844, both inclusive, the county cess has been—

| Years. | Amount.    | Years. | Amount.    | Years. | Amount.      | Years. | Amount.      |
|--------|------------|--------|------------|--------|--------------|--------|--------------|
| 1829   | £. 865,415 | 1833   | £. 981,498 | 1837   | £. 1,022,964 | 1841   | £. 1,068,608 |
| 1830   | 879,775    | 1834   | 1,006,126  | 1838   | 1,138,065    | 1842   | 1,191,094    |
| 1831   | 867,081    | 1835   | 996,127    | 1839   | 1,215,540    | 1843   | 1,151,110    |
| 1832   | 946,049    | 1836   | 1,037,930  | 1840   | 1,209,660    | 1844   | 1,129,438    |

We subjoin a summary—

Account of the various Sums passed by the Grand Juries of the several Counties, Cities, &c., of Ireland, in 1844, specifying the Amounts presented under each head of Expenditure, with their Totals for each County, City, &c., and for the Kingdom.

| COUNTIES, &c. |  | HEADS OF EXPENDITURE.                 |    |                                              |        |                                                |    |                                                                 |    |                                                                            |       | Total.                                                       |    |                                                                            |    |                   |       |                                      |    |                                                   |    |    |        |    |    |

SECT. 4.—*National Debt.*

THE practice of borrowing money, in order to defray part of the war expenditure, was introduced into this country in the reign of William III., and has ever since been acted upon. How much soever opinions may differ as to the policy of borrowing or funding in ordinary times, it could not, at its introduction into Great Britain, be dispensed with. The Revolution involved us in a bloody and expensive contest with Louis XIV., then in the zenith of his power, who espoused the cause of the exiled family of Stuart. But, though great and imminent, the danger from without was inferior to that from within. A numerous and powerful party were favourable to the views of the Pretender; and the imposition of such an additional load of taxes as would have been required to defray the heavy cost of the contest we were obliged to wage for our liberties and religion, would have given a violent shock to industry, and afforded the Jacobites the means of traducing the new government, of fomenting popular discontent, and, most probably, of overturning the revolutionary establishment. Under such circumstances, the contraction of debt was not really a matter of choice, but of necessity. The error, if there has been any, consisted in continuing the system of loans, after the new government was firmly established; and when either the whole or a larger portion of the war expenditure might have been defrayed by taxes raised within the year.

In the infancy of the funding system it was customary to borrow upon the security of some tax, or portion of a tax, set apart as a fund for discharging the principal and interest of the sum borrowed. This discharge was, however, very rarely effected. The public exigencies still continuing, the loans were, in most cases, either continued, or the taxes were again mortgaged for fresh ones. At length the practice of borrowing for a fixed period, or, as it is commonly termed, upon *terminable* annuities, was almost entirely abandoned, and most loans were made upon *interminable* annuities, or until such time as it might be convenient for government to pay off the principal.

In the beginning of the funding system, the term fund meant the taxes or funds appropriated to the discharge of the principal and interest of loans; those who held government securities, and sold them to others, selling, of course, a corresponding claim upon some fund. But after the debt began to grow large, and the practice of borrowing upon interminable annuities had been introduced, the meaning attached to the term fund was gradually changed; and instead of signifying the security upon which loans were advanced, it has, for a long time, signified the principal of the loans themselves.

Owing partly, perhaps, to the scarcity of disposable capital at the time, but far more to the supposed insecurity of the revolutionary establishment, the rate of interest paid by government in the early part of the funding system was comparatively high. But as the country became richer, and the confidence of the public in the stability of government was increased, the rate of interest was proportionally reduced.

During the reigns of William III. and Anne, the interest stipulated

for loans was very various. But in the reign of George II. a different practice was adopted. Instead of varying the interest upon the loan according to the state of the money market at the time, the rate of interest was generally fixed at *three* or *three and a half* per cent. ; the necessary variation being made in the *principal funded*. Thus, suppose government were anxious to borrow, that they preferred borrowing in a 3 per cent. stock, and that they could not negotiate a loan for less than  $4\frac{1}{2}$  per cent., they effected their object by giving the lender, in return for every 100*l.* advanced, 150*l.* of 3*l.* per cent. stock ; that is, they bound the country to pay him or his assignees 4*l.* 10*s.* a-year in all time to come, or otherwise to extinguish the debt by a payment of 150*l.* In consequence of the prevalence of this practice, the principal of the debt now existing amounts to nearly *two-fifths* more than the sum actually advanced by the lenders.

This system of funding has been in the last degree injurious, though some advantages are either derivable, or supposed to be derivable from it. No doubt it renders the management of the debt, and its transfer, more simple and commodious than it would be did it consist of a number of funds bearing different rates of interest ; and it is contended that the greater field for speculation afforded to the dealers in stocks bearing a low rate of interest, has enabled government to borrow, by funding additional capitals, for a considerably less payment on account of interest than would have been necessary had such increase of capital not been made.

In point of fact, however, these advantages are but inconsiderable, while the disadvantages inseparable from the practice of funding a large amount of stock at a low rate of interest are great and lasting. During war, especially if any considerable portion of its expenditure be defrayed by means of loans, the rate of interest uniformly rises, and is usually much higher than during peace. If, therefore, loans were funded in stocks bearing a rate of interest equivalent to the market rate when they happen to be contracted for, the charge on their account might be reduced soon after the return of peace, according to the fall in the rate of interest ; whereas, when loans are funded in stocks bearing a low rate of interest, with a corresponding increase of capital, it may be impossible to take advantage of the fall of interest at the return of peace, and the country may be burthened with the war interest for an indefinite period. It is not easy to exaggerate the injury we have sustained by overlooking this plain principle. In 1815, to specify only one of many similar instances, government bargained for a loan of 36,000,000*l.*, it being stipulated that every subscriber of 100*l.* should be entitled to 174*l.*, 3 per cent. stock, and 10*l.*, 4 per cent. stock, making the interest on the loan 5*l.* 12*s.* 4*d.* per cent. The extreme improvidence of this transaction is obvious. Had from 5*l.* 15*s.* to 6*l.* per cent. of interest been paid for the loan, it might have been obtained without funding any additional capital : and had that been done, we should have been able, within four or five years, in consequence of the fall of interest after the peace, to reduce the charge on account of the loan to 3 or  $3\frac{1}{2}$  per cent. ; but, owing to the way in which the contract was made, we have not had, and will not have, any means of reducing the exorbitant charge on account of this loan, so long as the

market rate of interest is above 3 per cent., except by paying 174*l.* for every 100*l.* originally received, exclusive of the 10*l.*, of 4*l.* per cent. stock! But this, as already stated, is only one instance out of many of the same sort. We believe, indeed, that we are within the mark when we affirm that, owing to this erroneous method of funding, the country is at present paying from 6,000,000*l.* to 7,000,000*l.* a year on account of the public debt more than it would have had to pay, had the same sums been borrowed and funded without any increase of capital.

We have said that an interest of from 5*l.* 15*s.* to 6*l.* per cent., instead of the stipulated interest of 5*l.* 12*s.* 4*d.* per cent., would have enabled the loan of 1815 to be funded without any increase of capital; and this is not a hypothetical statement. In the year in question, 18,000,000*l.* of exchequer bills were funded in a 5 per cent. stock, at the rate of 117*l.* stock for every 100*l.* exchequer bills. This was equivalent to an interest of 5*l.* 17*s.* per cent., being only 4*s.* 8*d.* more than the interest paid on the loan, though the subscribers to the latter had 84*l.* of artificial capital created for every 100*l.* advanced, and the holders of the bills, only 17*l.* of artificial capital! But, in point of fact, the differences in the rates of interest, after allowing for certain circumstances connected with the loans, amounted to only 2*s.* 2*d.* per cent.! This shows how little the saving in the charge on account of interest, by funding increased capitals, deserves to be considered as at all detracting from the great public loss occasioned by indulging in so wasteful a practice.\*

That this improvident system should have been so extensively acted on by our finance ministers during the American and French wars is the more surprising, seeing that experience had already demonstrated the advantages of funding limited capitals at a comparatively high rate of interest. Owing, as already stated, to the scarcity of capital, and the supposed instability of the revolutionary establishment, the loans during the reigns of William III. and Anne were mostly contracted at a very high rate of interest. Luckily, however, this was not attempted to be disguised by assigning to the parties large amounts of stock bearing a low rate of interest. The stock created was the exact amount of the loans, the interest on it being increased according to the supposed insecurity of the government, the scarcity of floating capital, &c. Now, mark the consequences of this. So early as 1716, Sir Robert Walpole, availing himself of the greater facility with which money was procured after the treaty of Utrecht, and of the greater stability of the government, was able, by offering to pay off the creditors, to reduce the charge on account of the debt from 1,598,602*l.* to 1,274,146*l.*, being a saving of 324,456*l.*, or about one-fifth part of the entire charge. In 1727, a farther saving of about 340,000*l.* a-year was effected by reducing the interest on the greater portion of the debt from 5 to 4 per cent. And in 1749, during the administration of Mr. Pelham, the interest was again reduced from 4 to 3 per cent., a measure which produced a fresh saving of 565,000*l.* a-year.

Happily the practice of funding in a 5 per cent. stock, was not entirely abandoned during the late war. In 1822 the total British and

\* for a further and full discussion of this subject, see the *Treatise on Taxation and the Funding System*, by the author of this work, pp. 427-445.

Irish 5 per cent. stock amounted to about 150,000,000*l.*; and, by offering to pay it off, a reduction of interest was then effected to the extent of about 1,200,000*l.* a-year! And, since that period, further savings have been effected by the reduction of the interest on the 4 and 4½ per cent. stock. But, unfortunately, the far greatest proportion of the debt created during the late war, and that with the American colonies, was funded in the 3 per cents.; and, as already stated, the charge on that portion has, in consequence, been hitherto, and will, most probably, continue to be, for an indefinite period, unsusceptible of diminution.

*Payment of National Debt.—Sinking Fund.*—The payment of the national debt can be effected only by applying to that purpose such surplus revenue as the treasury may have to dispose of. But it was contended by the founders of the sinking fund, established in 1716, and still more strongly by Dr. Price and Mr. Pitt, the founders of the sinking fund of 1786, that if a certain amount of revenue be applied to buy up stock, and if the dividends on that stock be afterwards uniformly applied to the same object, the sinking fund will increase, at *compound interest*, so that the largest amount of debt might be defrayed almost without an effort. Dr. Price illustrated the operation of this principle by calculating the number of *globes of gold*, to which a penny laid out at compound interest at the birth of Jesus Christ would now amount to! But though a calculation of this sort be theoretically true, it is practically false and absurd. No sinking fund, even though it consisted of a clear surplus revenue, ever really operates at compound interest. It is, no doubt, true that, by constantly applying the same amount of free revenue, and the dividends accruing on the purchases, to buy up stock, the reduction of the latter is effected in the *same way* as if the free surplus revenue were increasing, by an inherent energy of its own, at compound interest; but it is essential to know that, though the *modus operandi* be the same, the means are radically and totally different. The debt is reduced because a portion of the produce of the taxes is systematically applied to pay it off, and not otherwise. To make capital increase at compound interest, it must be employed in some sort of productive industry; and the profits, instead of being consumed as income, must be regularly added to the principal, to form a new capital. It is unnecessary to say that no such sinking fund has ever existed. Those that have been set on foot in this and other countries have all been supported either by loans or by the produce of taxes, and have never paid off a single farthing of debt by their own agency.

It is clear, from this statement, that when there is no surplus revenue, there can be no sinking fund. Dr. Price, however, did not scruple to lay it down broadly, that to suspend the sinking fund during war, though the expenditure might then greatly exceed the income, would be the greatest imaginable folly.\* And, inconceivable as it may now appear, all parties in parliament concurred in the soundness of this opinion, and approved the policy of keeping up the sinking fund machinery during the whole of the last war! Hence, the loans for the service of the year were increased by the entire amount of the sums placed at the disposal of the sinking fund commissioners; so that

\* Appeal to the Public on the Subject of the National Debt, p. 17. ed. 1774.

for every shilling's worth of stock transferred to them by this futile proceeding, an equal amount of *new debt* was contracted, exclusive of the loss incurred through the expense of management, &c.

For upwards of twenty years this wretched juggle was kept up; parliament and the nation believing, notwithstanding the most decisive experience to the contrary, that it was rapidly diminishing the public debt! Dr. Hamilton, of Aberdeen, has the merit of having dissipated this delusion, the grossest, certainly, that ever imposed on any people.

He showed, in his work on the national debt, published in 1813, that the sinking fund, instead of diminishing, had added to the debt; and he proved to demonstration, that the *excess of revenue above expenditure* is the only sinking fund by which any part of the national debt can ever be discharged. "The increase of revenue," he observes, "or the diminution of expence, are the only means by which the sinking fund can be enlarged, and its operations rendered more effectual; and all schemes for discharging the national debt, by sinking funds operating at compound interest, or in any other manner, unless in so far as they are founded upon this principle, are completely illusory." We subjoin an account illustrative of the progress of the funding and sinking fund systems during the war:—

*Account of Loans contracted in each Year from 1793 to 1816, both inclusive; of the Total Charge on account of these Loans; of the Portions of them paid to the Commissioners of the Sinking Fund; and of the Amount of the Dividends on the Stock purchased by said Commissioners. (Parliamentary Paper, No. 145, Sess. 1822.)*

Amount of loans, and of the interest payable on them, raised in Great Britain, to defray war expenditure in the period from 1793 to 1816, both inclusive. There was added, on account of the above sum of 306,852,067. of money borrowed, 669,850,000. to the funded debt of the country, being an increase of fictitious capital of 174,025,000.

Had, therefore, the sinking fund machinery not been kept on foot during the war, instead of borrowing 585,000,000., it would not have

been necessary to borrow more than about 396,000,000*l.*: and owing to the diminished amount of the loans, they would have been obtained at a lower rate of interest. Hence the sinking fund has been a costly, as well as a most delusive, piece of quackery. The loss it entailed on the country during the war has been estimated, apparently on reasonable grounds, at above 600,000*l.*

At length, the folly of contracting debt, for no other purpose but to pay it off, became obvious to every one; and the nominal amount of the sinking fund began to be diminished after the close of the war. In 1819, it was attempted to form a real sinking fund of 5,000,000*l.*; that is, to maintain a real surplus revenue of that extent. But as this could not always be done, an end was at length put to the entire system in 1829; the Act 10 Geo. IV. c. 27, having enacted, that the sum applicable in future to the reduction of the national debt should be the surplus, if any, of the total revenue beyond the total expenditure of the kingdom.

*Distribution of the Dividends, or Interest on the National Debt.*—

It appears from the subjoined account of the number of dividend warrants issued during the half-year ending the 5th of January, 1833, since which they have not materially varied, that they amounted in all to about 280,000. The large number (87,176) of holders of stock not producing above 5*l.* of half-yearly dividend, is principally, we believe, ascribable to the circumstance of the Bank of England and the majority of the London banks not allowing interest on deposits.

We may observe, by the way, that the number of persons having a direct interest in the funds is much greater than it would appear to be from this account. The dividends upon the funded property belonging to the Bank of England and other banks, to the Equitable and other insurance companies, &c., are paid upon single warrants, as if they were due to so many private individuals; whereas they are really paid to these individuals only because they act as factors or trustees for a vast number more. It is, consequently, quite absurd to pretend, as is sometimes done, that any interference with funded property would affect only 280,000 individuals out of a population of 28,000,000. Any attack upon the dividends would really be destructive, not merely of the interests of those to whom dividend warrants are issued, but of all who depend upon them: it would destroy our whole system of banking and insurance, and overspread the country with bankruptcy and ruin. Not only, therefore, is every proposal for an invasion of the property of the fundholders bottomed on injustice and robbery, but it would, were it acted upon, be little less ruinous to the community than to the peculiar class intended to be plundered.

The unfunded debt on the 5th of January, 1817, amounted to 44,650,300*l.*, being 33,289,300*l.* greater than its amount on the 5th of January, 1793; and this sum has, of course, to be deducted from the total debt contracted during the French war, to get the amount of the funded debt contracted during that contest.

## CHARGE.

[illegible]

*An Account showing the Total Amount of the Unredeemed Funded Public Debt of the United Kingdom, and the Annual Charge thereon, on the 5th day of January, 1817, and on the 5th day of January in every subsequent Year down to 1846.*

The Interest paid within each Year is given in the column of Charge, which Interest has accrued upon the Capital stated in the preceding Year.

*Account of the Principal and Annual Charge of the Public Debt at different Periods since the Revolution.\**

|                                                                                                                                  | Principal, Funded and Unfunded. | Interest and Management. |
|----------------------------------------------------------------------------------------------------------------------------------|---------------------------------|--------------------------|
| Debt at the Revolution, in 1689                                                                                                  | £. 661,288                      | 20,955                   |
| Excess of Debt contracted during the reign of William III. above Debt paid off                                                   | 15,700,431                      | 1,771,077                |
| Debt at the accession of Queen Anne, in 1702                                                                                     | 16,361,722                      | 1,310,848                |
| Debt contracted during Queen Anne's reign                                                                                        | 7,730,661                       | 2,040,416                |
| Debt at the accession of George I., in 1714                                                                                      | 54,145,383                      | 3,351,251                |
| Debt paid off during the reign of George I., above Debt contracted                                                               | 2,153,125                       | 1,138,867                |
| Debt at the accession of George II., in 1727                                                                                     | 52,022,258                      | 3,217,561                |
| Debt contracted from the accession of George II. till the peace of Paris in 1763, three years after the accession of George III. | 66,779,192                      | 2,604,560                |
| Debt in 1763                                                                                                                     | 138,863,450                     | 4,868,651                |
| Debt at the commencement of the American war, in 1775                                                                            | 10,801,795                      | 80,480                   |
| Debt contracted during the American war                                                                                          | 182,593,635                     | 4,471,571                |
| Debt at the conclusion of the American war, in 1784                                                                              | 121,267,903                     | 5,038,336                |
| Debt at the commencement of the French war, in 1793                                                                              | 948,651,639                     | 9,360,907                |
| Debt contracted during the French war                                                                                            | 10,801,980                      | 549,777                  |
| Debt at the commencement of the French war, in 1793                                                                              | 230,350,146                     | 9,311,630                |
| Debt contracted during the French war                                                                                            | 601,500,843                     | 22,704,311               |
| Total Funded and Unfunded Debt on the 1st of February, 1817, when the English and Irish Exchequers were consolidated             | 840,850,401                     | 22,015,941               |
| Debt Cancelled from the 1st of February, 1817, to 8th of January, 1846                                                           | 55,767,469                      | 3,160,497                |
| Debt, and charge thereon, 5th of January, 1846                                                                                   | 785,082,932                     | 28,125,584               |

\* This account has been made up partly from the table in Dr. Hamilton's work on the National Debt (2nd ed. p. 100), partly from Price on the State of the Finances in 1794 (p. 8), and partly from the above Account.

The reduction of the principal of the public debt since 1817 has been effected partly by applying surplus revenue to its discharge, and partly by the conversion of a portion of the interminable into terminable annuities. The reduction of the annual charge has been partly, of course, brought about by paying off the principal; but more by the reduction of the interest paid on the 5 and 4 per cent. stock existing in 1817, and by that paid on the unfunded debt, or on exchequer bills. The total saving of interest between 1822, when the first, and 1844, when the last, reduction was made, has been 3,051,800*l*.

We subjoin—

*A Return showing the Results of the Operations undertaken in 1822, 1824, 1825, 1830, 1834, and 1844, for reducing the Charge on account of the National Debt, and the Terms upon which such Reduction was made; also, showing the Annual Interest on the Funded Debt saved thereby.*

## CHAPTER III.—DEFENCE.

### SECT. 1. *Army, Militia, &c.*

THE force kept up for the defence of the empire against foreign attack, and for the maintenance of tranquillity and security at home, consists principally of the army and navy.

ARMY.—The military force of Great Britain, like that of all the contiguous states, has differed widely at different epochs. During the period posterior to the Conquest, when the feudal system was in its vigour, the whole lands of the kingdom were distributed into what were called *knights' fees*, of which there were above 60,000 in England only. And every tenant *in capite*, or person holding any such fee, was bound to hold himself in readiness, if called upon, to attend the sovereign in his wars, either at home or abroad, for *forty* days each year. Persons unable or unwilling to serve were obliged to provide unexceptionable substitutes, so that a force of about 60,000 men could thus be set on foot with but little or no cost to the Crown. When the forty days' service were accomplished, the feudal militia were en-

titled to return home; those that kept the field for a longer period being paid by the sovereign for their services. But in those days, when there were few fortified places, and war was not carried on upon any scientific principles, the predatory and marauding campaigns of which it mostly consisted did not often extend beyond forty days.—(*Blackstone*, i. p. 410. ed. 1775, &c.)

But though a militia of this sort answered tolerably well in a rude age for the defence of the country, it was speedily found to be very ill fitted for carrying on the foreign wars in which our princes of the House of Plantagenet were so often involved. Hence, the system of commuting military service abroad for a money payment, or *scutage*, as it was then termed, on knights' fees, was early introduced;\* and as its advantages became more obvious, it was gradually substituted for military service at home. At length money payments having almost universally replaced feudal services, the latter were finally abolished by the 12 Charles II. c. 24.

Exclusive, however, of the feudal militia or constitutional force of the kingdom, our sovereigns always maintained bodies of stipendiary or mercenary troops in England, as well as in the Norman provinces. The expense was defrayed, for the most part, from the revenues and vast estates that then belonged to the Crown; but partly, also, by money obtained in commutation of feudal services, and sometimes, at a later period, by parliamentary grants. With the exception of those employed as guards in the Tower of London, Dover Castle, and other fortified places, and for protecting the marches, or borders of the kingdom along the Scotch frontier, the stipendiary troops were disbanded as soon as the occasion for their services had expired. They were a mercenary, but not a standing, army.

During the civil wars in the reign of Charles I., the royal army chiefly consisted of regiments raised by the nobility and gentry who espoused the cause of the king from among their tenants and dependants. The parliamentary forces consisted principally of stipendiary troops recruited in the great towns, which were, for the most part, hostile to the royal cause. Both parties, however, had recourse to every expedient for increasing their forces, whether it were consistent with law or not.

The origin of the present standing army dates as far back as 1660, or, perhaps, earlier. In that year Charles II. formed two regiments of guards, one of horse and one of foot, consisting principally of troops that had been previously embodied; and these, with the regiment of Royal Scotch, brought from France in 1661, and some other regiments that were soon after set on foot, formed in all a force of about 5,000 men, including the troops in garrison abroad. In the latter part of the reign of James II. this force was increased, including the troops

\* The first instance of this sort of commutation is said to have occurred in the reign of Henry II. That prince, instead of requiring his vassals to accompany him in his war with the Earl of Thoulouse in 1159, imposed on them a *scutage* or tax which produced 180,000*l.* money of the time, being equal to 2,700,000*l.* of our money. By this means he consulted the prejudices of such of his English subjects as wished to remain at home, and procured the means of furnishing himself with a much more efficient army. (See *Lyttelton's History of Henry II.*, 8vo. ed. vol. ii. p. 422, and the elaborate note on the same subject in the Appendix.)

in Ireland, to about 30,000 men: but parliament did not sanction the enrolment of these forces, nor did it vote the money required for their pay and subsistence. They were embodied by authority of the Crown only, and were paid for either from the civil list, or by diverting money intended for other objects to that purpose.\* The principal dependence of James II. for the success of his unconstitutional projects was placed in the devotedness of this great army. But his conduct disgusted the military as well as the rest of his subjects; and the cheers of the troops encamped on Hounslow Heath at the acquittal of the bishops proved that he had entirely lost their sympathy, and could no longer trust to them for support. In fact, no sooner had the Prince of Orange landed, than they went over to him almost to a man.

The danger arising from so unconstitutional a prerogative was, however, too great not to be immediately provided against; and it was consequently declared in the Bill of Rights, that the raising or keeping a standing army within the kingdom in time of peace, unless with consent of parliament, is contrary to law. And from this epoch down to the present day, the army has been kept on foot under authority of an Act, annually renewed, called "*An Act for punishing mutiny and desertion; and for the better payment of the army and their quarters.*" This Act specifies the number of men to be kept on foot; the conditions under which they are enlisted, paid, billeted, &c.; and lays down a system of martial law for their government. His Majesty is authorised to issue articles of war in conformity with this Act. These are usually printed with, and subjoined to, the Mutiny Act, and to them the reader is referred for further particulars.

*Government of the Army*—The king is the supreme head, or generalissimo, of all the British forces by land and sea. He cannot, as already stated, raise or maintain forces without the authority of parliament; but in all that respects the distribution, officering, and organisation of the forces granted by parliament, he is supreme. He has, also, the sole government and disposal of all forts, arsenals, and fortified places. The military can receive no orders but such as emanate from the king; and these they are bound implicitly to obey, unless they be obviously at variance with the recognised laws of the land.

All measures with respect to the employment of the military force are, of course, decided upon by his Majesty in council; and ministers are as responsible for them as for any other acts of the government.

The command of the army, under the king, is committed to a commander-in-chief, enjoying the confidence of the ministry of the day. It is the duty of this officer to provide for the execution of such measures as may be determined upon by his Majesty in council in relation to the army, and to exercise a vigilant superintendence over all its concerns, so as to maintain it, at all times, in the highest state of efficiency and discipline.

\* The first parliament of Charles II. voted 1,200,000*l.* as the ordinary revenue of the Crown; but in the latter years of his reign it amounted to more. In the reign of James II. the revenue amounted to near 2,000,000*l.* (*Hallam's Constitutional History*, iii. p. 156.)

The commander-in-chief is assisted in the discharge of his multifarious and important duties by several subordinate officers, who are each at the head of a peculiar department ; such as the adjutant-general and the quarter-master-general.

The adjutant-general has the superintendence of all matters relating to what may be called the *personnel* of the army. He is the channel through which all officers communicate with the commander-in-chief ; and all orders, instructions, and regulations with respect to the recruiting, organisation, discipline, &c. of the army, come within his province. He has also the superintendence of all matters with respect to the inspection of clothing and accoutrements, the employment of officers of the staff, the granting of leaves of absence, &c.

The functions of the quarter-master-general are chiefly called into operation during war. His duty is to prescribe routes and marches ; to regulate the embarkation and disembarkation of troops ; to provide them with quarters ; to mark out the ground for encampments ; to prepare and arrange plans for the defence of a country, &c. Much of the success of an army in the field depends on the way in which the duties of the quarter-master-general's department are performed. The admirable manner in which they were executed in Spain, under the superintendence of the late Sir George Murray, has been universally acknowledged.

There used formerly to be a barrack-master-general and a commissary-general ; but, at present (1838), the duties of the former of these officers are performed by the Board of Ordnance, and those of the latter by the Treasury.

The affairs of the artillery and engineers are superintended by a separate board under the master-general of the Ordnance, who has the military command of the artillery, and of the corps of royal engineers and sappers and miners. Exclusive of the barrack department, the provision of forage for the whole of the troops at home is under the Ordnance, as is the superintendence of fortifications and military works at home and abroad. The Ordnance also provide the troops of the line, and the militia and volunteers, with guns, ammunition, and arms of all sorts ; and they further perform this office for the navy.

The functions of the paymaster-general are strictly ministerial ; his business being merely to make payments without exercising any discretion, in pursuance of warrants directed to him by the secretary-at-war and the Treasury, or both. A regimental paymaster is attached to each regiment.

The secretary-at-war is, as it were, the civil officer of the army, being the channel of communication between it and the government. He is bound to give effect to the orders of the commander-in-chief, unless they appear to be contrary to the existing rules of the service, or to occasion an excess of expenditure, in which cases he is to refer to the Treasury for instructions, and to abide by them. It is his duty to prepare the army estimates, and to submit them to parliament. He is not necessarily a member of the Cabinet, though sometimes he has a seat in it

*Organisation of the Army.*—The British army is divided into

cavalry, infantry, and artillery, and these again into regiments and battalions. The three regiments of horse guards consist at present (1846) each of 32 officers, 53 non-commissioned officers, 351 privates, and 274 horses. The ordinary cavalry regiments have each, at an average, 27 commissioned officers, 31 non-commissioned officers, 328 privates, and 271 horses. The grenadier regiment of foot guards, consisting of three battalions, has 96 officers, 180 non-commissioned officers, and 2,080 privates. The other two regiments of foot guards consist also of two battalions each, and have each 1,280 privates, but only 61 officers, and 111 non-commissioned officers. The ordinary infantry regiments consist of one battalion, having each 39 officers, 64 non-commissioned officers, and 800 privates. The royal regiment of artillery consists of nine battalions, having 464 officers, and 8,222 non-commissioned officers and men, exclusive of the horse brigade, and the engineers, sappers and miners.

The officers or staff of an ordinary cavalry regiment, having 328 privates, and divided into six troops, are as follows, viz.: 1 colonel, 1 lieutenant-colonel, 1 major, 6 captains, 6 lieutenants, 6 cornets, 1 paymaster, 1 adjutant, 1 quarter-master, 1 surgeon, 1 assistant-surgeon, and 1 veterinary surgeon—in all, 27. The officers or staff of an ordinary infantry regiment, consisting of one battalion of 800 men rank and file, comprise 1 lieutenant-colonel, 2 majors, 10 captains, 12 lieutenants, 8 ensigns, 1 paymaster, 1 adjutant, 1 quarter-master, and 1 surgeon, with two assistants—in all 39. When additional battalions are raised, each has a separate staff. The colonelcy of a regiment is in great measure a sinecure.

*Appointment of Officers.*—Officers may either purchase their appointment originally, and each succeeding step of promotion according to the rules of the service, or they may be appointed in the first instance, and subsequently promoted without purchase, by the commander-in-chief; but officers in the artillery and engineers are promoted by a ministry only. They are all commissioned by the king. Very few officers in the British army have risen from the ranks; and, in this respect, as well as in several others, it differs materially from the army of France, and of some of the other continental states. It has been questioned whether it be as superior to them in this particular as it certainly is in most others. But, despite what has been alleged to the contrary, we are disposed to think that the arrangement in question powerfully contributes to maintain the discipline of the army; to hinder it from being influenced by popular feelings or prejudices; and to make it (in which its chief excellence consists) a willing as well as an efficient instrument in the hands of the executive. But though the Duke of Wellington has, in his able and well considered evidence before the Commissioners on Military Punishments, successfully obviated some of the more common objections to the present practice, public opinion appears to be setting more strongly in favour of promotion from the ranks. A late warrant (19 December, 1845), judiciously directs that to assist non-commissioned officers in providing their outfits, they shall receive, on being nominated commissioned officers in cavalry and in infantry regiments, the former gratuities of 150*l.*, and the latter of 100*l.* each.

*Prices of Commissions.*

| Rank.                                                                    | Full Price<br>of<br>Commissions. | Difference in<br>Value<br>between the<br>several<br>Commissions<br>in succession. | Difference in<br>Value<br>between<br>Full and Half<br>Pay. |

*Enlistment.*—Formerly it was customary to enlist soldiers by what is called *indenture*. In other words, certain individuals bound themselves by indenture to provide a given number of able-bodied men to serve his Majesty for some specified time, at certain capitulated rates of pay and bounty, then called wages or regards. It was usual for the King to advance beforehand a portion of such pay or bounty, which was called “impressment money,” and to give security for the regular payment of the remainder. But this system has been long abandoned, and the business of enlisting or recruiting for the army has been carried on, since the Revolution, by military officers appointed for that purpose.

Soldiers used to be enlisted either for a limited or an unlimited number of years, or which is the same thing, till they be discharged. The limited periods for which a person might enlist were fixed at 7 years for the infantry, 10 years for the cavalry, and 12 years for the artillery, provided the party enlisting were of the age of 18 years or upwards: but, if under 18, then the difference between his age and 18 was to be added to the above periods of 7, or 10, or 12 years, as the case might be. A person when enlisted is to be brought, not sooner than one nor later than four days, before a justice of the peace, who is

directed to put to him certain questions contained in the schedules of the Mutiny Act; and, to give persons time to reflect on what they have done, and to prevent hasty or incautious enlistment, it is provided that, if any recruit brought before a justice, or, who, not being brought goes voluntarily before one (as he is authorised to do), and declares his dissent from the enlistment, he is to be released therefrom, and discharged on his paying a fine of twenty shillings, together with the enlisting money and other expenses incurred on his account.

Napoleon laid it down as a fundamental principle, "*que la conscription est le mode de recrutement le plus juste, le plus doux, le plus avantageux au peuple*;" and the armies of France, Prussia, and most continental nations continue to be recruited on this principle. Nor have those been wanting who have recommended the introduction of the conscription into this country, or, at least, an extension to the army of the principle on which the militia is recruited. Recruiting by voluntary enlistment is, however, the only plan that is consistent with the free principles of the British constitution; and, notwithstanding the deference due to the authorities on the other side, it is intrinsically the best. We do not mean to deny that the system of conscription, provided it be made equal and impartial, has some advantages; but they are certainly very much overbalanced by the disadvantages with which it is inseparably connected. Among the individuals subject to a conscription, there is the greatest discrepancy of tastes and tempers, some preferring the military profession to any one else, while others hold it in abhorrence. The system of voluntary enlistment avails itself of these differences. Far from offering violence to any one, it gratifies all, by enabling those who choose to become soldiers and those who prefer other pursuits to prosecute them without let or hindrance. The conscription, on the other hand, introduces a system of fatalism, where there should be choice and discrimination, the chances being equal that the lots will fall upon the individuals most disinclined to enter the army. Who would think of forcing people, against their inclinations, to become miners, shoemakers, or weavers? and why should the State attempt to enforce a system productive of still greater hardship and injustice? If soldiers could not be procured by other means, we should readily admit that necessity formed a valid excuse for the introduction of a conscription; but such is far indeed from being the case. Men in abundance may always be found, without any compulsory process, and with very moderate encouragement, ready to undertake any employment, how disagreeable or hazardous soever. The free and adventurous life of a soldier has, however, many powerful attractions. Even during war the dangers and privations of campaigns are underrated, and the chances of advancement proportionally exaggerated in the heated imaginations of the young and the inconsiderate; and, unless their pay and other advantages be very decidedly below what the state of society requires, a moderately populous country may, without the least difficulty, obtain any number of troops by voluntary enlistment. During the latter years of the war, when the prices of almost everything sustained an extraordinary advance, the pay of the troops continued stationary, and was not, consequently, so good as it ought to have been, or as it has

since become, now that the prices of most articles have been materially reduced ; though we continue of opinion that it might and ought still to be raised. The custom of allowing criminals to enlist into the army has also had a tendency to degrade the service, and to generate a prejudice against it ; and of late years many have supposed that a similar effect was produced by the popular odium attached to the punishment of flogging ; but we doubt whether this latter circumstance has had any perceptible influence. Punishment is not wantonly inflicted ;\* and never, indeed, without the party punished having committed some very grave offence, such as stealing, being drunk on duty, insulting officers, &c. And there are very few so conscious of their own demerit as to suppose, when they are about entering the army, that they will ever commit any such offences, or that, consequently, they will ever be made amenable to punishment. We do not, therefore, attach any weight to this statement ; and the enlisting of criminals into the army is now nearly put an end to. Provided the soldier be sufficiently paid, that merit and long service be sufficiently rewarded, and crime and bad conduct be repressed by prompt and suitable punishment, there is nothing in the army to render it unpopular ; and we may depend upon it that, under the conditions supposed, no difficulty will ever be found in obtaining ample supplies of the best men for the public service. Conscription is, in fact, as unnecessary as it is cruel and revolting. It we be ever forced to resort to this arbitrary and oppressive expedient, the necessity will have arisen from the adoption of some spurious system of economy, or from something improper in the treatment of the troops, or both.

The plan of enlisting for limited periods began in 1806, and was justly regarded as a very great improvement. Many men, who would not adventure upon enlistment for life, might, notwithstanding, be disposed to enlist for a term of seven or ten years, thinking that, if the service turned out to be less agreeable than they expected, they would be able to leave it. But the chances are that, though they may not relish it much at first, by the time they have been seven years in the army they will have become so habituated to it, as to have no wish to leave it. We regret, however, to have to state, that though introduced, this mode of recruiting has been abandoned on account of the number of men who left the army with pensions, and the consequent expense entailed on the country. This, however, does not show that the plan for enlisting for limited periods is bad, but only that the inducements to continue in the army were not so powerful as they should be. Consequently the proper plan would have been not to put an end to the system of enlisting for limited periods, but to increase the motives to remain in the army, by making some considerable addition to the pay of the troops, and by making the right to receive pensions depend on their having served for considerable periods. The army cannot be on the footing on which the public interests require that it should be placed, if the troops have any good grounds for envying the condition of any of the great classes of ordinary labourers.

\* The maximum number of lashes that may be inflicted is, by a regulation enacted in the course of the present year (1846), reduced to 50.

At present pensions are, under certain circumstances, allowed to soldiers on their receiving leave to retire from the army, and on their being obliged to retire in consequence of ill-health or other permanent disability. These are principally determined by warrants issued in 1829 and 1833; and we are sorry to have to add that the pensions allowed under the former are decidedly more liberal, and may be obtained under less onerous conditions, than those allowed under the latter. We doubt, indeed, whether the deductions from the pensions to soldiers made by the warrant of 1833 have not more than counter-vailed all the other measures adopted in the interval for the improvement of the condition of the soldier. Enlistment for fixed periods of seven years or thereby, with additional pay to soldiers who re-enlist, and handsome retiring pensions to those who serve for 14 and 21 years, are all that is necessary to obviate desertion, and to ensure an ample supply of the best men for the army; and it will probably be found that without them nothing else can be of any material service.

We subjoin some returns in regard to recruiting:—

*Return showing the Total Number of Recruits for the British Army admitted from 1834 to 1843, both Years inclusive, specifying the Numbers admitted in each Year; also, the Standard Heights and Ages fixed for the Recruits, and their average Height and average Age; distinguishing the number enlisted in England, Scotland, and Ireland, respectively, in each Year, and specifying the Number examined and found Fit, and the Number found Unfit, of each Nation. (Parl. Paper, No. 635, Sess. 1845.)*

*Number of Troops.*—Owing to the jealousy with which a standing army was long regarded, and the heavy cost of its maintenance, it has always been confined, at least in periods of peace, within pretty narrow limits. In the reign of William III, during the short interval between the treaty of Ryswick and the war of the Spanish succession, the standing army was reduced, in opposition to the most obvious considerations of expediency, and despite the efforts of the King, to so few as 7,000 men. And William, who had been the instrument, under Providence, of establishing a free government in these realms, and of preserving the balance of power in Europe, was obliged to submit to the mortification, which he felt most acutely, of dismissing his favourite regiments of Dutch guards and French refugees. (*Hallam*, iii. p. 190.) During the lengthened administration of Sir Robert Walpole, the standing army generally amounted to about 17,000 men, exclusive of the troops in Ireland, but inclusive of those in Gibraltar and Minorca. After the peace of Paris in 1763, the peace establishment was fixed, including the troops in garrisons abroad and in Ireland, at about 40,000 men. In the course of the American war, both the army and navy were very much augmented; but at the conclusion of that unfortunate contest they were again reduced to what might be considered, under the altered circumstances of the world, as something like their old level. All previous contests and armaments were, however, thrown into the shade, and made to appear insignificant, by the vast efforts that signalised the war with France, that broke out in 1793, and was only terminated in 1815. During the latter years of that momentous contest, which was truly a struggle *pro aris et focis*, we had, including volunteers, yeomanry, militia, &c., a land force embodied of not less than 450,000 men! Happily, our exertions and sacrifices were crowned with success; and not only provided for our own security, but were

mainly instrumental in enabling continental Europe to emancipate itself from the military despotism by which it had for a while been crushed. We subjoin an account, taken from official documents, of the regular troops, exclusive of the ordnance at home, in the colonies, and in foreign countries, in 1792, 1815, and 1853, and of the expense incurred on their account :—

In 1792 the sums voted upon the British estimates were—

|                                                                                    | £.      | s. | d. |
|------------------------------------------------------------------------------------|---------|----|----|
| For Great Britain . . . . .                                                        | 560,205 | 12 | 0  |
| For the Colonies . . . . .                                                         | 319,488 | 3  | 0  |
| Difference between British and Irish pay of regiments<br>lent by Ireland . . . . . | 7,153   | 17 | 3  |
| Recruiting, bread money, and returned poundage . . . . .                           | 98,037  | 15 | 0  |

£984,885 7 3

The charge of the army in Ireland has not been correctly ascertained, but it is believed to have been about . . . . .

601,000 0 0

£1,585,885 7 3

The sums voted upon the army estimates for 1815, which included the Irish charge, were—

|                               | £.        | s. | d. |
|-------------------------------|-----------|----|----|
| For the land forces . . . . . | 6,721,880 | 7  | 5  |
| For augmentations . . . . .   | 384,260   | 1  | 11 |
| For foreign corps . . . . .   | 833,715   | 1  | 0  |

£7,939,855 10 4

These estimates are all exclusive of the charge for *non-effective* services, or for half-pay, pensions, &c., and of the expense defrayed by the East India Company. The total sum voted on account of the effective military force, exclusive of the ordnance, for the year 1853-54, was 4,565,076*l.*, of which 939,293*l.* is to be defrayed by the East India Company.

*Ordnance.*—There were voted, on the Ordnance Estimates for 1853-54, 276 officers of engineers ; 3 officers, and 2,197 men as sappers and miners ; 563 officers and 13,855 men in the royal regiment of

artillery; 44 officers and 1,064 men in the Royal Horse Artillery, &c.: making in all (including medical officers) 943 officers and 16,655 men. The total sum voted on account of the Ordnance Estimates for the year 1853-54 was 2,882,352*l.*; making the total expense of the army for that year 9,078,583*l.*

On page 449 is an account of the Army Estimates for 1853-54, exhibiting in detail the number of each description of force, and the separate items of expenditure.

*Abstract Statement of the Numbers and Descriptions of the Land Forces embodied for the Year 1853-54.*

*Pay of Troops.*—The pay and other emoluments of the officers and men in the army depend partly on the department of the service to which they belong, and partly on the length of time during which they have been in the service. The pay of what are called the household troops, consisting of the two regiments of Life Guards, and the royal regiment of Horse Guards, or Oxford Blues, is higher than that of any other description of force. The pay of a private varies, in these regiments, from 1*s.* 9½*d.* to 2*s.* 0½*d.* a day; the pay of a private in the cavalry of the line being 1*s.* 4*d.*; in the foot guards, 1*s.* 2*d.*; and in the infantry of the line 1*s.* 1*d.* a day; the statutory allowance of 1*d.* a day as beer-money, payable to all non-commissioned officers and men in Great Britain and Ireland, being uniformly included. Soldiers, however, are not entitled to receive the whole of this pay in money. When at home in barracks, or in stationary quarters, they are supplied with bread and meat, at the rate of three-quarters of a pound of meat and one pound of bread a day for each man, for which 6*d.* a day, and not more, is to be deducted from their pay. The principal part of a soldier's clothes and accoutrements are furnished at the public expense. The pay of all privates serving in the cavalry is, however, liable to a deduction of 2*s.* 7½*d.* a week on account of such articles; and a deduction of 1*s.* 1*d.* a week is made from the pay of privates in the foot guards, and of 1*s.* 6*d.* a week from the pay of all other privates serving in the infantry, on the same account.

*Account of Her Majesty's Land Forces during the Year 1853-54, specifying the Numbers in each Corps, with the Pay and other Allowances for the same.*

Certain descriptions of officers, as paymasters, surgeons, assistant-surgeons, lieutenants, quarter-masters, and veterinary surgeons, are entitled, after certain periods of service, to additional pay. Privates enlisted prior to the 24th of January, 1823, are entitled to 1d. per diem, additional pay, after seven years' service; and *all* persons are entitled to 2d. per diem, additional pay, after fourteen years' service. The following table exhibits the daily pay of all descriptions of commissioned and non-commissioned officers and men in the principal departments of the service, as fixed by royal warrant of the 1st of April, 1834.

*Annual Rates of Pay of Officers.*

| Rank of Officer.                                                   | First Dragoon Guards. | Other Regiments of Cavalry. | Regular Infantry. | First West India Regiment. | Second West India Regiment. |

*Half Pay.*—Besides their pay when embodied, and on service, all classes of commissioned officers, who have served certain periods, receive, when reduced, or off duty, certain sums, denominated half pay. A few officers, and others, receive what are called military allowances. The rates of half pay are of two sorts, denominated *new* and *old*. All officers placed upon half pay during the late war, or who may have been reduced upon the formation of a peace establishment, and all officers compelled for the *public convenience* to retire upon half pay, or in consequence of ill-health, as certified by the medical board, are entitled to the new rate of half-pay.

Table exhibiting the New and Old Rates of Half Pay.—(Warrant 1st May, 1846.)

| Rank of Officer.                                                                                                                                                                            | Cavalry.           |                    | Infantry.          |                    |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|--------------------|--------------------|--------------------|
|                                                                                                                                                                                             | New Rate.          | Old Rate.          | New Rate.          | Old Rate.          |
|                                                                                                                                                                                             | Per diem.<br>s. d. | Per diem.<br>s. d. | Per diem.<br>s. d. | Per diem.<br>s. d. |

The number of officers receiving half-pay in 1853-54 was 2,859; the total sum awarded to them being 351,390*l.* The military allowances during the same year were 11,530*l.*, divided amongst 61 individuals.

The widows of deceased officers are also entitled to pensions; varying from 90*l.* for the widow of a colonel, to 30*l.* for the widow of a veterinary surgeon. During the year 1853-54, no fewer than 2,335

widows received such pensions: the sum voted on their account was 117,637*l.*—(*Army Estimates for 1853-54*, pp. 105-107.)

A considerable sum (79,500*l.* in 1853-54) is also annually voted to enable Her Majesty to make compassionate allowances and gratuities to the families and relatives of deceased officers in distressed circumstances, and to officers who have lost an eye, or sustained other serious and permanent injury on service.—(*Estimates for 1853-54*, p. 107.)

*Soldiers' Pensions.*—A considerable part of a soldier's remuneration has been made to depend on pensions and gratuities given for wounds received in action, length of service, &c. The expediency of this arrangement is obvious. The pay and the habits of a soldier are not such as afford any rational prospect of his making any certain provision for old age; and, though they were, the casualties to which he is exposed, especially during war, would in many instances effectually hinder him from accomplishing anything of the sort. But it would be alike degrading to the profession, and injurious to the best interests of the nation, were those who had been disabled in the public service to be thrown as paupers on the parish; or that deserving soldiers, after serving for fourteen years, or upwards, should be turned adrift with nothing to depend upon. To obviate the hardships and inconveniences which would result from such a state of things, pensions and gratuities are granted under certain conditions, in consideration partly of wounds or disabilities received in the service, and partly of length of service.

The first general regulation as to pensions was issued in 1806. A number of warrants, bearing upon the same subject, having been issued at different subsequent periods, a general warrant, consolidating and amending their various regulations, was issued in November, 1829 (see *ante*, p. 445). But this was subsequently superseded by the warrant issued on the 7th of February, 1833; which promulgated a new, and, as previously seen, a less liberal scale of pensions and gratuities. But in it, as in all previous warrants, the right of the soldier to be pensioned according to the regulations in force when he enlisted is preserved.

The pensions granted under this warrant are either permanent or temporary, according to circumstances. Pensions for wounds in action differ, according to the severity of the wound, from 6*d.* a day to a private, and 1*s.* to a sergeant, to 2*s.* to a private, and 3*s.* to a sergeant; and in cases of extreme suffering, an additional grant may be made, not exceeding 6*d.* a day. The loss of sight, from causes attributable to the service, is recompensed by a pension of from 9*d.* to 1*s.* a day. Men unfit for the ordinary duties of a soldier, and discharged after twenty-one years' service in the infantry, and twenty-four years' service in the cavalry, receive a permanent pension varying from 6*d.* to 1*s.* a day for privates, to 1*s.* and 1*s.* 6*d.* a day for sergeants. Men discharged, after the above-mentioned periods of service, as unfit for the ordinary duties of a soldier, and who are at the same time incapable, by injuries contracted in the service, of earning a sufficient livelihood, receive, in addition to the above rates, 3*d.* and sergeants 6*d.* a day. Men discharged from the service, and unfit to earn a livelihood, after fourteen and twenty-one years' service, receive permanent pensions; privates, of 6*d.* and 8*d.*, and sergeants, of 9*d.* and 1*s.* a day. Temporary pensions are also granted to persons, unfit for the ordinary duties of a soldier, leaving the army under seven

years' service; and to those leaving it, for the same cause, above seven but under ten years' service, and so on. Soldiers of good character, though enlisted for indefinite periods, may, at their own request, be discharged, on payment of certain fixed sums, after certain specified terms of service; and they are entitled to a free discharge in the infantry after fifteen, and in the cavalry after sixteen, years' service. Soldiers obtaining free discharges are also entitled, if they settle in any of the colonies, to gratuities varying with the length and description of their service, which are to be paid on their settlement. Gratuitous and honorary medals are also given for good conduct and meritorious services.

*Chelsea Hospital.*—This magnificent establishment was founded in the reign of Charles II., for the relief and support of disabled and worn-out soldiers. It is managed by a board of commissioners, to whose superintendence the various regulations as to the granting of pensions in the army is committed; and who admit a certain number of persons into the establishment, where they are boarded and lodged. Hence the distinction between *in* and *out* pensioners; soldiers living in any part of the country, and receiving a pension, being called out-pensioners of Chelsea Hospital, while those who reside in the house are called in-pensioners. The numbers of the latter vary; but at present they amount to 540. The total out-pensioners upon Chelsea Hospital in 1853-54, amounted to 64,998; their annual expense being 1,191,150*l.* We subjoin an account of the number of out-pensioners upon Chelsea Hospital in 1853-54, classified according to the description of force to which they belonged, and specifying the numbers in each class, and the daily pensions payable to each:—

*Account of Out-Pensioners of Chelsea Hospital in 1853-54.*—(From Army Estimates for 1853-54, p. 110.)

Which, for 365 days is . . . . . 1,163,311 10 1*½*

A royal school is attached to Chelsea Hospital; where the orphans and other children of soldiers are brought up and educated.

*Distribution of the Forces.*—Owing to the number of our colonies and other possessions, some of which are to be found in every part of the world, the British army is more widely diffused than that of any other power; and it may safely be affirmed that, compared with its numbers, the duties imposed on it, and which it has never failed to discharge, are far more onerous than those imposed on the troops of any other nation. Indeed it seems to be the all but universal opinion of those best acquainted with such subjects, that the army is overworked; and that to preserve its efficiency, and that security which is so essential to all parts of the empire, a very considerable addition should be made to its numbers. We subjoin—

*A Statement showing the Establishment and Effectives of the British Army, and Officers and Men, with its distribution on the 1st of January, 1839, and the 1st of January, 1845.*—(Parl. Paper, No. 635, Sess. 1845.)

*Militia.*—This term, in its general sense, means the whole body of persons, whether stipendiary or not, who bear arms in defence of the state. But, amongst us its meaning is restricted to the county forces selected by lot from the inhabitants, and commanded by the lords-lieutenant. The standing army being, as already stated, an object of

much jealousy with many persons ; and the necessity of having a force provided, not merely for the preservation of internal tranquillity, but to oppose an enemy in the case of invasion, led most persons attached to popular principles to recommend the substitution of a militia for a standing army. This favourite plan was carried into effect in 1757. By the Act then passed (18 Geo. II., c. 30), a certain number of the inhabitants of every county, selected by ballot, were to serve in the militia for three years, or else to provide substitutes. They were to be annually called out, trained, and disciplined for a certain number of days ; and were to be officered by the deputy lieutenants and principal landholders. They were not compellable to march out of their respective counties, except in case of invasion or of actual rebellion ; nor were they in any case compelled to march out of the kingdom. While upon duty, they were subject to martial law ; but at other times this was not the case. Subsequent Acts considerably altered and modified this system. During the late war, the militia was kept constantly on foot, and might be sent to any part of the kingdom ; so that it differed little from the regular army, except that it could not be sent abroad, and that it was recruited by ballot. But, in addition to the above, a militia, called *local*, corresponding very closely to the militia of the reign of George II., was established in every county. After the peace of 1815, the militia was disembodied : it may, however, be still called out if necessary, but that is rarely thought to be the case.

The popularity that attached to the militia at its first formation was but short-lived ; and it soon began to be looked upon rather as a sort of preparatory school for the regular army, than as good for any thing else. During the late war, the militia laws inflicted a very great hardship upon the lower classes. The persons liable to the ballot were partly rich and partly poor ; but personal service was not essential, the parties chosen being at liberty either to provide a substitute, or to pay certain sums. In point of fact, therefore, the militia degenerated into a sort of capitation tax ; with this oppressive and unjust peculiarity, that it fell with as much severity on the poor as on the rich ; so that, while it only imposed a trifling sacrifice on the latter, it often forced the poor man from his home, and compelled him to become a soldier. In consequence, the militia became exceedingly unpopular ; and it is not very probable that the hardship and injustice inseparable from it would be again submitted to.

*Volunteers, Yeomanry.*—In addition to the standing army and the militia, there were embodied, during the late war, very large bodies of volunteers, consisting partly and principally of voluntary infantry (volunteers), and partly of voluntary cavalry, or yeomanry. These were called out each year, and disciplined for three weeks ; and as they consisted entirely of volunteers, and were not called upon to leave their homes, or to quit their ordinary employments, except for the short period they were in quarters, the duty was not found to entail any serious privation. The volunteers were disbanded at the peace ; but numerous troops of yeomanry, which is probably the best of that description of force, are still kept up.

According to the muster-rolls in the early part of 1836, the yeomanry force of Great Britain consisted of 338 troops, including 1,155 officers

and 18,210 men. The total cost to the public may be estimated at about 100,000*l.* a-year.—(*Parl. Paper*, No. 405, Sess. 1836.)

We, however, are firmly impressed with the conviction, that a standing army, constituted by voluntary enlistment, is decidedly superior to any other description of force that can be employed, either to maintain tranquillity at home, or to carry on war abroad. The benefits of the division of labour are as conspicuous in this as in any other department. To be a good soldier, a man must be nothing else. Militiamen and yeomanry, called only for short periods from their ordinary avocations, never acquire those habits of discipline, and of prompt and willing obedience, that are of the essence of a soldier. They are more than half citizens; and, being actuated by all the partialities and prejudices of the district or sect to which they belong, they always act under a bias, and can with difficulty be kept to the strict line of their duty. A regular soldier has no such partialities: he does what he is ordered, and he does no more. The fear of his being employed to subvert the constitution, and to establish arbitrary government, is too absurd to deserve notice; and it would be childish in the extreme, to deny ourselves the great and signal advantages derivable from a standing army when kept within due bounds, from any ridiculous apprehension of its being employed to overthrow that liberty and security of which it is the best support.

*Police*.—Exclusive of troops, militia, and yeomanry, a police force is kept up in most large towns. This is a description of civil force, maintained for the preservation of good order, and the prevention of crime; the organisation and efficiency of which differ in different places. Its expenses are usually defrayed by a rate laid on the inhabitants of the town or place where it is established. The metropolitan police was newly organised a few years ago; and is now a very effective force. At present it consists, exclusive of commissioners, clerks, &c., but including superintendents, inspectors, sergeants, and privates, of nearly 4,000 individuals. The 2 and 3 Vict., c. 93, authorised the different counties of England and Wales, provided they thought proper, to establish a constabulary force for the maintenance of the public tranquillity, consisting of chief constables, inspectors, &c. Various counties have availed themselves of the powers conferred by this Act. In 1843, 2,216 officers and men were embodied under its provisions, the nett expenditure on their account being 145,803*l.*—(*Parl. Paper*, No. 222, Sess. 1844.)

*Police, Ireland*.—The police or constabulary force of Ireland is armed, and has more of a military than of a civil character. According to recent arrangements, a lord-lieutenant is appointed to each Irish county, through whom all communications to the Irish government are made. The lords-lieutenant are assisted in the discharge of their duties by an indefinite number of deputy lieutenants. All these officers act gratuitously, and are removable at pleasure. The constabulary force amounted, on the 1st of January, 1845, to 35 county inspectors, 210 sub-inspectors, 260 head-constables, 1,458 constables, and 7,407 sub-constables; making a total of 9,370 men, maintained at an expense of 451,577*l.*—(*Parl. Paper*, No. 234, Sess. 1845.)

SECT. 2.—*Navy.*

THE navy of Great Britain has long been her pride and best bulwark. The sea service has always been popular. No one fears that the sailors in the pay of the State will ever be employed to subvert the national liberties; and, not being engaged in the preservation of internal peace and good order, they escape all that suspicion and unpopularity that sometimes attach to the military: they are, in fact, formidable only to our enemies; and our exemption for so long a period from hostile aggression, though partly ascribable to our insular situation, is mainly a consequence of the superiority of our navy. The House of Lords, in an address to Queen Anne, in 1707, laid it down as "a most undoubted maxim, that the honour, security, and wealth of this kingdom does depend upon the protection and encouragement of trade, and the improving and right encouraging its naval strength \* \* \* therefore, we do in the most earnest manner beseech your Majesty, that the sea affairs may always be your first and most peculiar care." And there cannot be a question that, in this instance, the Lords gave utterance to what were then, and have ever since been, the sentiments of the great majority of the nation.

*Progress of the Navy.*—Notwithstanding the vast naval power of Great Britain in the last and present centuries, the navy did not become formidable till the reign of Elizabeth. Previously to her reign, or that of her father, our sovereigns had but few ships; when they wished to transport an army to France, or to undertake any considerable naval enterprise, it was usually effected by requisitions of ships and seamen from the different seaport towns, which were dismissed as soon as the occasion for their service was over. The naval force collected to oppose the Armada consisted of 176 ships, and about 15,000 men; being a larger armament than had ever been previously brought together under any English commander. But of this fleet, only about 40 ships and 6,000 men belonged to the royal navy; the rest of the ships and men being furnished by London, Bristol, Yarmouth, the Cinque Ports, &c. At the end of Elizabeth's long and prosperous reign, the navy consisted of 42 ships, of different sizes, of the estimated burthen of 17,000 tons, and carrying 8,340 men.

During the pacific reign of James I. the navy, though not neglected, was not materially enlarged. Charles I. added, in the early part of his reign, several ships to the navy; but in 1648 Prince Rupert carried off 26 ships, none of which ever returned to England. So reduced, indeed, was the navy at the commencement of Cromwell's government, that he had only 14 ships of war of two decks, some of them carrying only 40 guns. But his vigorous and able administration speedily raised the navy to a magnitude and power formerly unknown; and, under the command of Blake, it became not merely equal, but superior to that of the Dutch, then the greatest maritime power of Europe. When greatest, Cromwell's navy consisted of about 150 sail, of which more than 50 had two decks. The seamen employed exceeded 20,000. Cromwell divided the navy into rates and classes, nearly in the same way as at present.

James II., when Duke of York, and afterwards when king, paid

much attention to the navy and to naval affairs; and greatly distinguished himself in some desperate engagements with the Dutch. At his abdication the navy amounted to 173 sail, measuring 101,892 tons, and having on board 6,980 guns, and 42,000 seamen.

The famous battle off Cape la Hogue, in 1692, gave the British navy an ascendancy over that of France which it has ever since preserved. It was, besides, materially increased during the reign of William III., being continued nearly on the footing on which he left it during the reigns of Anne and George I. In the wars of 1744 and 1755, our naval enterprises were crowned with the most signal success. In 1760, at the demise of George II., the navy consisted of 412 ships, measuring 321,104 tons; the men voted for the naval service that year being 51,645 seamen, and 18,355 marines. The total sum voted on account of the navy during the same year was 5,611,508*l*.

The progress of the navy since 1760 is familiar to every one. It is sufficient, therefore, to observe, that, though the combined fleets of France and Spain seemed to have an ascendancy during part of the American war, the victories of Rodney restored our previous superiority. The nature of the struggle with revolutionary France, the bitterness with which it was carried on, and the fleets required not merely for the protection of our own shores, but for that of our mercantile shipping, and of our numerous colonies in all parts of the world, led to an immense increase of our naval force; and while our navy was thus progressively augmented, the decisive victories of the 1st of June, 1794, and of St. Vincent, Camperdown, the Nile, Copenhagen, and Trafalgar, almost destroyed every fleet that could be opposed to it, leaving us the undisputed masters of the ocean.

*Rating of Ships.*—It is of very considerable importance, in order to insure union in the movements of a fleet, and to facilitate their fitting out and repair, that ships of the same rate or class should not differ materially in size or build from each other: this, however, has been too little attended to. Sir John Barrow mentions, in proof of the inconveniences resulting from the improper rating of ships, that when Lord Nelson was off Cadiz with 17 or 18 sail of the line, he had no fewer than seven different classes of 74-gun ships, each requiring different sized masts, sails, &c.; so that in the event of one of these being disabled, the others could not supply her with stores suitable to her wants! (*Supplement to Encyc. Brit.* vol. vi. p. 31.)

To obviate these inconveniences, a new classification of shipping was introduced in 1816; and it is now ordered that the Navy shall be rated as follows:—

1. Rated Ships, viz., ships registered on the list of the Royal Navy, under one of the six following rates:—

*First Rates*, to comprise all ships carrying 110 guns and upwards, or whose complements consist of 950 men or more.

*Second Rates*, to comprise one of her Majesty's yachts, and all ships carrying under 110 guns, and not less than 80 guns, or whose complements are under 950, and not less than 750 men.

*Third Rates*, to comprise her Majesty's other yachts, and all such vessels as may bear the flag or pendant of any admiral superintendent, or captain su-

perintendent of one of her Majesty's dock-yards; and all ships carrying under 80 guns, and not less than 70; or whose complements are under 750, and not less than 620 men.

*Fourth Rates*, to comprise all ships carrying under 70 guns, and not less than 50; or whose complements are under 620, and not less than 450 men.

*Fifth Rates*, to comprise all ships under 50 guns, and not less than 30; or whose complements are under 450, and not less than 300 men: and

*Sixth Rates*, to consist of all other ships bearing a captain.

2. Sloops:—

To comprise bomb-ships and all other vessels commanded by commanders.

3. All other ships commanded by lieutenants, and having complements of not less than 60 men.

Smaller vessels not classed as above, to have such smaller complements as the Lords Commissioners of the Admiralty may from time to time direct.\*

Subjoined is an account of the ships in commission and in ordinary in 1792, 1815, and 1839.

|                     |      | 1st Rate. | 2nd. | 3rd. | 4th. | 5th. | 6th. | Small Vessels, &c. |
|---------------------|------|-----------|------|------|------|------|------|--------------------|
| Ships in Commission | 1792 | ..        | 2    | 10   | 5    | 14   | 12   | 81                 |
|                     | 1815 | 1         | 2    | 22   | 5    | 50   | 25   | 113                |
|                     | 1839 | 4         | 5    | 15   | 2    | 8    | 21   | 120                |
| Ships in Ordinary   | 1792 | 7         | 19   | 102  | 16   | 79   | 30   | 179                |
|                     | 1815 | 12        | 15   | 173  | 13   | 100  | 60   | 167                |
|                     | 1839 | 14        | 10   | 31   | 15   | 53   | 3    | 23                 |

*Navy of Great Britain in 1839, exclusive of Ships being Built.*

|                     | 1st Rate. | 2nd. | 3rd. | 4th. | 5th. | 6th. | Small Vessels. |
|---------------------|-----------|------|------|------|------|------|----------------|
| Ships in Commission | 4         | 5    | 15   | 2    | 8    | 21   | 120            |
| Ships in Ordinary   | 14        | 10   | 31   | 15   | 53   | 3    | 23             |
| Total Ships         | 18        | 15   | 46   | 17   | 61   | 24   | 143            |

*Number of Seamen and Marines, and Sums voted on account of the Naval Service, in 1792, 1815, and 1853.\**

| Years. | Men.                 | Sums.        |
|--------|----------------------|--------------|
| 1792   | 16,000               | £. 1,985,482 |
| 1815   | 70,000 for 3 months  | } 17,032,700 |
| 1853   | 90,000 for 10 months |              |
|        | 45,500               | 6,235,493    |

N.B. These sums include the *non-effective* as well as the *effective* services. The expenses of the navy in 1792 really amounted to 2,361,192*l.*; for, besides the sums voted, 444,710*l.* was added to the navy debt, and an armament, not included in the above, cost 131,000*l.*

\* This table, and several of those that follow, are extracted from the *Navy List*, published by authority. This list contains a great deal of useful information; and is, in all respects, as superior as can well be imagined to the *Army List*. The latter contains little or nothing save an account of the general and field officers, and of the officers of the different regiments.

*Account of the various Items voted on the Navy Estimates for the Year 1853-54.*

| Description of Items.                                                                | Amount.   |
|--------------------------------------------------------------------------------------|-----------|
| Wages to Seamen and Marines . . . . .                                                | £.        |
| Victuals for ditto . . . . .                                                         | 1,736,236 |
| Admiralty Office . . . . .                                                           | 615,426   |
| Scientific Branch . . . . .                                                          | 137,245   |
| Her Majesty's Establishments at Home . . . . .                                       | 84,939    |
| Her Majesty's Establishments Abroad . . . . .                                        | 184,280   |
| Wages to Artificers, &c., employed in Her Majesty's Establishments at Home . . . . . | 22,764    |
| Wages to Artificers, &c., employed in Her Majesty's Establishments Abroad . . . . .  | 683,648   |
| Naval Stores, &c., for the Building and Repair of Ships, Docks, Wharfs, &c. . . . .  | 35,566    |
| New Works, Improvements, and Repairs in the Yards, &c. . . . .                       | 1,023,011 |
| Medicines and Medical Stores . . . . .                                               | 256,948   |
| Miscellaneous Services . . . . .                                                     | 26,000    |
|                                                                                      | 57,427    |
| Total for the Effective Service . . . . .                                            | 4,763,440 |
| Half-Pay to Officers of the Navy and Royal Marines . . . . .                         | 687,573   |
| Military Pensions and Allowances . . . . .                                           | 483,134   |
| Civil Pensions and Allowances . . . . .                                              | 148,394   |
| Total for the Naval Service . . . . .                                                | 6,082,543 |
| <i>For the Service of other Departments of Government.</i>                           |           |
| Army and Ordnance Departments (Conveyance of Troops) . . . . .                       | 158,950   |
| Grand Total . . . . .                                                                | 6,235,493 |

(Navy Estimates for 1853-54, p. 2-3.)

*Cost of Building and Repairing Ships.*—The expense of building and fitting out ships of war differs widely at different periods: it depends partly on the mode in which they are built, rigged, &c., and partly on the price of timber, iron, canvass, cordage, &c., at the time. The following statement is believed to be nearly accurate, in so far as respects the quantities of timber, canvass, and cordage required for different classes of ships; but, for the reasons now stated, little or no reliance can be placed on the estimate of their aggregate expense.

*Table showing the Loads of Timber, Yards of Canvass, and Fathoms of Rope, required for each Rate of Ships of War, with the Expense of their Hull, Masts, Yards, Rigging, &c.*

|             | Number of Guns. | Tonnage. | Loads of Timber. | Yards of Canvass. | Fathoms of Rope. | Expense of Hull, Masts, Yards, &c. |
|-------------|-----------------|----------|------------------|-------------------|------------------|------------------------------------|
|             |                 |          |                  |                   |                  | £.                                 |
|             | 120             | 2,602    | 5,880            | 20,101            | 30,250           | 100,394                            |
|             | 80              | 2,279    | 4,339            | 20,791            | 32,400           | 71,782                             |
|             | 74              | 1,741    | 3,600            | 17,434            | 27,152           | 64,073                             |
|             | 52              | 1,468    | 2,372            | 17,514            | 28,700           | 41,355                             |
|             | 46              | 1,063    | 1,800            | 12,373            | 20,728           | 31,316                             |
|             | 28              | 500      | 963              | 8,118             | 19,081           | 17,120                             |
| Corvette 18 | 456             | 614      | 8,816            | 19,350            | 13,037           |                                    |
| Brig . . 18 | 382             | 471      | 6,394            | 10,709            | 10,126           |                                    |
| 10          | 235             | 337      | 4,656            | 7,835             | 6,721            |                                    |
| Schooner —  | 183             | 250      | 4,340            | ..                | 4,975            |                                    |
| Cutter . —  | 161             | 186      | 4,729            | ..                | 4,603            |                                    |

The wear and tear of ships in the navy when afloat, and especially during war, is necessarily very great, but, owing to the prevalence and destructive ravages of the *dry rot* in timber, the waste of ships, even

when laid up in ordinary, has sometimes been quite extraordinary: in fact, instances have occurred in which the hulls of new ships have been found so much affected with this disease, that it has been necessary to give them a thorough repair, or almost to rebuild them, before they were in a state to go to sea! Many plans and precautions have been suggested for obviating the influence of this "timber plague;" but their success, though considerable, has been far from complete. Should any easily available plan of extirpating it be discovered, the advantage will be very great, not merely in the saving of expense in the repair of Her Majesty's ships, and of our mercantile navy, but in rendering ships more efficient, and in preventing the destruction of much valuable timber. Subjoined is an account, deduced from the navy estimates, of the cost of building new ships, and of the expense of the repair and of the ordinary wear and tear of her Majesty's ships, from 1800 to 1819, both inclusive.

*Estimated Charge for the Building, Repair, and Wear and Tear of Ships, from 1800 to 1820.*

| Year.    | Building.  | Repairs.   | Ordinary<br>Wear and Tear. | Total<br>each Year. |

*Government of the Navy.*—The general direction and control of all affairs connected with the navy is entrusted, under Her Majesty, to the Lord High Admiral, or to the commissioners for discharging the functions of that officer. The duties of the Lord High Admiral were formerly judicial as well as administrative; he having not merely to govern the navy, but to preside over a court for adjudging all nautical cases, and for taking cognisance of all offences committed on the high seas. But the judicial are now separated from the other duties of this high functionary, being devolved upon the Judge of the Admiralty Court.—(See *ante*, p. 189.)

From the reign of Queen Anne down to the present time, with the exception of the short period during which William IV., when Duke of Clarence, held the office, the duties of the Lord High Admiral have been discharged by commissioners. These have consisted gene-

rally of a first lord, and of four or six junior lords. Civilians may be appointed to these offices; but at least two of the lords are always professional men. But, though assisted by junior lords, practically, all the power and authority of the board is vested in the first lord. We agree with those who contend that this is the best arrangement. It gives that efficiency and consistency to the orders of the board they could hardly be expected to possess were the authority of the different lords equal; and it also produces a greater responsibility and attention to his duties on the part of the first lord. The powers exercised by the Board of Admiralty are extensive and important. By their orders all ships are built, repaired, fitted for sea, or laid up in ordinary, broken up, or sold; put in commission, or out of commission; armed, stored, and provisioned; employed on the home or on foreign stations. All appointments, or removals of commission and warrant officers, are made by them; and all instructions issued for the guidance of their commanders; all promotions in the several ranks emanate from them; all honours bestowed for and without services, and all pensions, gratuities, and superannuations for wounds, infirmities, and long services, are granted on their recommendation. All returns from the Fleet are sent to the Board of Admiralty, and every thing that relates to the discipline and good order of every ship. All orders for payment of naval moneys are issued by the lords commissioners of the Admiralty; and the annual estimate of the expenses of the navy, prepared by them is laid before Parliament for its sanction. All new inventions and experiments are submitted to them before being introduced into the service; all draughts of ships must have their approval; all repairs, alterations, and improvements in the dock yards, and all new buildings, of every description, must be decided upon by them before they are undertaken. (*Supp. to Ency. Britannica*, art. NAVY.)

There are three gradations of admirals, viz., admirals, vice-admirals, and rear-admirals; and each of these gradations consists of three divisions, distinguished by the colour of their flags. Thus, there are admirals of the red, the white, and the blue squadrons, bearing their respective flags at the main-top-gallant mast-head; vice-admirals of the red, the white, and the blue squadrons, bearing their respective flags at the fore-top-gallant mast-head; and rear-admirals of the red, the white, and the blue squadrons, bearing their respective flags at the mizen-top-gallant mast-head. All admirals, whatever be their rank, take the common title of *flag officers*.

Admirals rank with generals in the army, vice-admirals with lieutenant-generals, and rear-admirals with major-generals. The command of each ship is intrusted to a captain, or to a commander, who has under him a certain number of lieutenants, according to the size of the ship, with a master, purser, midshipmen, gunners, &c. A captain of three years' standing ranks with a colonel in the army, and a captain of less than three years' standing with a lieutenant-colonel; a commander ranks with a major, and a lieutenant with a captain. The captain is responsible for the discipline and efficiency of the crew, and the good order of the ship. Notwithstanding he is furnished with minute instructions for his guidance in every particular, much must

always necessarily depend on his conduct and character. He has power to order punishment to be inflicted ; but it must be done in the presence of all the officers and ship's company. An account, stating all the circumstances, must also be entered in the ship's log, an abstract of which is forwarded each quarter to the Admiralty. This regulation has tended to repress hasty and inconsiderate punishment ; and has done much to improve the conduct of the officers, as well as to promote the proper discipline of the navy.

*Appointment of Officers.*—Young gentlemen enter the service as volunteers of the 1st class ; and every officer, commissioning a ship, is allowed to make *one* fresh entry. A volunteer must remain two complete years in that capacity, and attain the age of fourteen, before he can be rated a midshipman ; when he has completed six years' service, and attained the age of nineteen, he may be examined in seamanship, and also in navigation, for the rank of lieutenant ; and should he pass such examination, he is eligible to hold a warrant as mate, if his conduct be satisfactory to his captain.

Young gentlemen were formerly allowed to enter the service by becoming students at the Naval College at Portsmouth, but that establishment was abolished by the Board of Admiralty in 1835.

No person can receive a commission as lieutenant unless he have passed the above examinations ; but having done so, he is eligible for promotion to that rank. A lieutenant is not eligible for a commander's commission till he have served two years at sea in a ship of war as lieutenant ; nor is a commander eligible for a captain's commission till he have served one complete year at sea in a ship of war as commander.

In 1830 a temporary restriction was placed on promotions by a minute of the Admiralty Board. This limited the promotion of officers to the rank of captain, and all below that rank, to filling up one in three vacancies on the list, with the exception, viz., 1st, of death vacancies on foreign stations, which the commanders-in-chief have authority to fill up ; 2d, the reservation to the Admiralty of power to promote for special or brilliant services ; 3d, of the occasion of a commander-in-chief striking his flag ; and 4th, on the recommendation of the Board of Customs for services in the coast guard.

Captains and admirals are promoted by seniority, on what is termed a " flag promotion " taking place ; but a captain must have served as under, in command of a rated ship, before he can obtain his flag ; viz.,

|                                     |          |
|-------------------------------------|----------|
| In war . . . . .                    | 4 years. |
| In war and peace combined . . . . . | 5 ,,     |
| In peace . . . . .                  | 6 ,,     |

All other classes of officers are promoted at the discretion of the Board of Admiralty.

*Enrolment of seamen.*—Any person may enter the navy as a common seaman, on application to the commanding officer of any of Her Majesty's ships in commission, provided he be approved by the examining surgeon, and have not previously been " discharged from the service with disgrace."

Persons who have never been at sea are rated as landsmen, and sea-faring men are rated as " ordinary " or " able " seamen, besides numer-

ous gradations of petty officers to which they are rated at the discretion of the commanding officer.

Seamen are also obtained for the navy at the breaking out of a war, or on any other emergency, by the practice of *impressment*. The antiquity and legality of this practice cannot be questioned; but very great doubts have been, and may be, entertained of its expediency.\* Foreigners are the only persons exempted at common law from impressment; but exemptions have been created by acts of parliament in favour of various classes, as landmen, apprentices, foreigners, seamen employed in the fisheries, watermen in the service of fire insurance companies, &c.

*Marines*.—Privates are received into the marine corps from 18 to 25 years of age, provided they be 5 feet 7½ inches high, and approved on examination by the surgeon.

*Discipline of the Navy*.—The rules and provisions for the enforcement of discipline and good order in the navy, are embodied in an act of the 22 Geo. II., explained and amended by an act of the 19 Geo. III. These acts form what may be called the martial law of the navy; and to them we beg to refer the reader for an account of the penalties imposed on cowardice, neglect of duty, &c.

*Pay, &c., of officers and men*.—Full pay differs not only according to the department of the service to which officers and men are attached, but also, in some instances, according to the rate of the ship on board which they are serving.

**FULL PAY OF THE ROYAL NAVY.**—*Flag Officers*, per diem: Admiral of the Fleet, 6*l.*; Admiral, 5*l.*; Vice-Admiral, 4*l.*; Rear-Admiral, Commodore of First Class, and Captain of the Fleet, 3*l.*; Commodore of Second Class, 1*l.*, or 10*s.* in addition to pay as Captain, according to Admiralty Order. If commanding in chief, a further sum of 3*l.* while his flag is flying within the limits of his station.

*Captains* of ships of the line, except flag ships, 53*l.* 14*s.* per lunar month; Senior Captains of the Ordinary, and other such establishments, 46*l.* 0*s.* 8*d.*; Captains of regular flag ships, and of fourth rates, 38*l.* 7*s.*; all other Captains, 30*l.* 13*s.* 8*d.*

*Commanders*, 23*l.* 0*s.* 4*d.* per lunar month, in all rates authorized to bear one.

*Lieutenants* in command of any ship, except surveying and packet establishment, senior of a sea-going rated ship, of a rated surveying vessel (if receiving no additional surveying pay), or of a troop ship, if of seven years' standing, 15*l.* 8*s.*; all others, 14*l.* per lunar month.

*Master of the Fleet*, 16*s.* 5*d.* per diem. Masters in line-of-battle ships, 16*l.* 6*s.* 8*d.*; in other ships, 14*l.* per lunar month. Store allowances when in charge—First rate, 6*l.* 10*s.* 11*d.*; second rate, 5*l.* 19*s.* 10*d.*; third rate, 5*l.* 5*s.* 8*d.*; fourth rate, 3*l.* 19*s.* 1*d.*; fifth rate, 3*l.* 14*s.* 9*d.*; sixth rate, 3*l.* 2*s.* 2*d.*; sloops, 2*l.* 17*s.* 4*d.*

*Mate*, 5*l.* per mensem, in all rates.

*Second Master*, 5*l.* 9*s.* 4*d.* in line-of-battle ships, and 5*l.* per mensem in all others. In vessels where no Master is borne, is to receive 5*l.* 9*s.* 4*d.* per mensem, and store allowance of 2*l.*, or in vessels where the Master is absent, or from any other cause he has charge of stores, to receive such allowance as the Lords of the Admiralty shall decide.

*Chaplains*, 12*l.* 5*s.* per lunar month. In addition, if acting as Naval Instructor, under three years' service as such, 7*l.* 7*s.*; above three years, 8*l.* 1*s.*; above seven, 8*l.* 17*s.* 4*d.*; above ten, 10*l.* 10*s.*; with tuition allowance of 5*l.* for each young gentleman.

*Medical Inspectors* of less than ten years' service as such, 44*l.* 2*s.*; after ten years, 58*l.* 16*s.* per lunar month. *Deputy Inspectors*, 28*l.* Surgeons of hospitals on

\* For remarks on the policy of impressment, and the propriety of its abolition, see the note on Impressment, in the edition of the *Wealth of Nations*, by the author of this work.

appointment, with less than twenty years' service, 16*s.* 6*d.*; above twenty years, 1*l.* 0*s.* *cd.* per diem. Of less than six years' full pay service, including service as Assistant-Surgeon, 15*l.* 8*s.*; above six years, 16*l.* 16*s.*; above ten, 19*l.* 12*s.*; above twenty, 25*l.* 4*s.* Of hospital ship, of whatever length of service, 25*l.* 4*s.* per mensem, in all rates. With such further allowance when employed in hospitals on shore as their Lordships may think proper.

(Surgeons on the list, and unemployed on the 1st of July, 1840, are entitled to the old scale of pay only, until they shall have served three years on full pay subsequent to the 1st of January, 1838.)

*Secretary to Admiral of the Fleet*, 1*l.* 7*s.* 4*d.* To a Flag Officer commanding in chief, 1*l.* 1*s.* 11*d.* To all other Flag Officers and Commodores of First Class, 16*s.* 5*d.*; Commodore of Second Class, 8*s.* 2*d.* per diem, and 5*s.* a-day from half pay of their respective ranks.

*Paymasters and Purser*, 7*l.* per mensem in all rates.

*Clerks*.—If passed for Paymaster and Purser, 5*l.* per mensem. Unpassed clerks, 4*l.* per mensem.

*Naval Instructors* of less than three years' full pay service, 9*l.* 16*s.*; above three, 10*l.* 10*s.*; above seven, 11*l.* 18*s.*; above ten, 14*l.* per mensem, with tuition allowance of 5*l.* for each young gentleman.

*Assistant Surgeon*.—In ships where no surgeon is borne, of less than ten years' full pay service, 11*l.* 4*s.*; above ten, 14*l.* And where a surgeon is borne, of less than three years' full pay service, 9*l.* 16*s.*; above three, 10*l.* 10*s.*; above ten, 12*l.* 12*s.* per mensem.

*Midshipmen*, 2*l.* 8*s.* per mensem, in all rates.

*Master's Assistant*, 3*l.* 11*s.* per mensem, in all rates.

*Naval Cadet*, 1*l.* 2*s.* per mensem, in all rates.

*Gunner*, 7*l.* full pay; harbour service, 5*l.* 17*s.* 1*d.* per mensem.

*Boatswain*, 5*l.* 9*s.* 4*d.* full pay; harbour service, 4*l.* 6*s.* 4*d.* per mensem.

*Carpenter*, 4*l.* 14*s.* full pay; harbour service, 3*l.* 11*s.* per mensem (with 7*s.* a month for tools in every rate.)

*Engineer*.—First class, 12*l.* full pay; harbour service, 7*l.* 17*s.* Second class, 8*l.*; harbour service, 4*l.* 18*s.*, with allowance of 14*s.* a month for each boy instructed. Third class, 5*l.* 6*s.*; harbour service, 3*l.* 8*s.* per mensem. (When within the tropics, to be allowed half the full pay in addition while the steam is up.)

**WORKING PETTY OFFICERS, per Mensem.**—*First Class*—Ship's cook, 2*l.* 13*s.*; Admiral's coxswain, 2*l.* 12*s.*; leading stoker, 2*l.* 12*s.* (and when within the tropics, and steam up, half his pay in addition.) Master-at-arms, seaman's schoolmaster, sail-maker, rope-maker, carpenters' mate (with 7*s.* a month for tools), caulker (with 7*s.* a month for tools while doing duty with carpenters), and blacksmith, 2*l.* 12*s.* in line-of battle-ships, and 2*l.* 9*s.* in all others. Ship's corporal, gunner's mate, captain's coxswain, quarter master, boatswain's mate, captains of the fore-castle, maintop, foretop, and of the hold, coxswain of the launch, 2*l.* 5*s.* in all rates.

*Second Class*.—Sail-maker's mate, cooper, armourer, caulker's mate (with 7*s.* a month for tools while doing duty with carpenters), 2*l.* 4*s.* in all rates. Captains of the mast, afterguard, mizen-top, yeoman of the signals, coxswain of the pinnace, paymaster and purser's steward, and musician, 2*l.* 1*s.* in all rates.

*Remainder of Ship's Company*.—Stoker and coal trimmer, 2*l.* 6*s.* (and when within the tropics, and steam up, half his pay in addition.) Carpenter's crew (with 7*s.* a month for tools), sailmaker's crew, cooper's crew, and painter, 1*l.* 16*s.* in all rates. Able seaman, yeoman of the store-room, flag officer's steward, cook, and domestic, captain's steward and cook, ward or gun room steward and cook, sub-officer's steward and cook, sick-berth attendant, 1*l.* 14*s.* in all rates.

Ordinary seaman, cook's mate, and barber, 1*l.* 6*s.*

Paymaster and purser's steward's mate, and landsmen, 1*l.* 3*s.* in all rates.

Seaman gunner, first five years from date of his passing certificate on gunnery, 2*s.*; second five years, 5*s.*; third five years, 7*s.*; in addition to his rating.

Diver, 1*s.* 6*d.*, to be paid when actually diving; 1*s.* for each period of slack water, or when there is no tide 1*s.* an hour in addition to his rating.

Engineer boys, first class, 1*l.* 14*s.*; second, 1*l.* 6*s.*; third, 1*l.* 3*s.*; fourth, 14*s.* 6*d.* in all rates.

Boys of first class, and paymaster and purser's steward's boy, 14*s.* 3*d.* Boys of second class, 12*s.* 9*d.* in all rates.

*Ranks and Ratings of Marines:—*

Widows of officers of the Royal Marines are entitled to the following pensions :—

| Widow of a—                  | Per Annum.<br>£. |
|------------------------------|------------------|
| General Officer . . . . .    | 120              |
| Colonel . . . . .            | 90               |
| Lieutenant-Colonel . . . . . | 80               |
| Major . . . . .              | 70               |
| Captain . . . . .            | 50               |
| First Lieutenant . . . . .   | 40               |
| Second Lieutenant . . . . .  | 36               |

The widows of Boatswains, Gunners, and Carpenters, of the Royal Navy, and Masters of naval vessels, appointed prior to the 30th of June, 1820, will, if otherwise qualified, be entitled to a pension of 25*l.*; but the widows of the above warrant officers, and the widows of Engineers who shall have been warranted subsequently to the 30th June, 1830, are not entitled to pensions unless their husbands shall have suffered a violent death, and provided they shall be otherwise entitled to the same, in which case the following pensions will be allowed :—

To the widow of a Gunner, Boatswain, Carpenter, or Engineer, whose husband shall have been killed in action, a pension of 35*l.* a year.

To the widow of any of the above-named warrant officers, whose husband shall have been drowned on duty, or suffered a violent death in an immediate act of duty, a pension of 30*l.* a year.

*Half-pay and Pensions of Petty Officers and Men.*—None but the officers mentioned above are entitled to half pay. Boatswains, gunners, carpenters, &c., on their ships being paid off, are put on what is called “ordinary pay,” which is about two-thirds of sea pay. In the navy, as in the army, provision has been made for such seamen and marines as have been disabled in service. Thus all petty officers, and all seamen and marines discharged the service for wounds received *in action*, are entitled to annual pensions, varying according to the rank of the party and the severity of the wound. Able seamen and marines discharged under 14 years’ service, in consequence of sickness or disability contracted in the service, are not, of right, entitled to pensions; but such may be awarded them, should the Admiralty think it expedient. Able seamen and marines who have served at least 14 years, and are discharged in consequence of sickness or disability contracted in the service, or for accidental hurts or wounds received in it, are entitled, if they be otherwise deserving objects of relief, to certain pensions; and pensions are also given to all seamen and marines discharged after 21 years’ service *for any cause* other than misconduct.

N. B.—The conditions under which these pensions are granted, and their amounts, are set forth in an order in council, dated 24th of August, 1831, which may be seen in the Navy List.

Pensioners are divided into the two great classes of *in* and *out* pensioners of Greenwich Hospital. This magnificent building, formerly a royal palace, was appropriated in the reign of William III. to its present purpose of serving as an asylum for seamen “who, by age, wounds, or other accidents,” have become unfit for further service. The building has since been greatly enlarged and improved; and is now the finest, in an architectural point of view, in the neighbourhood of the metropolis. The *in*-pensioners live in the hospital; the revenues of which are derived from various sources, but principally from the forfeited estates of the Earl of Derwentwater, and from a contribution

of 6*d.* a month deducted from the pay of all seamen employed in Her Majesty's service. Merchant seamen were obliged, until lately, to make a similar contribution; but this having been much objected to, has been given up. The number of in-pensioners on the establishment amounted, in 1830, to 2,710, and has not, we believe, materially varied in the interval. The revenue of the hospital being all required for the support of the establishment and of the in-pensioners, the out-pensioners are provided for by an annual parliamentary grant. This amounted, in 1853-54, to 210,288*l.*; and supposing that each pensioner receives, at an average, 11*l.* a-year, this would give a total of above 19,100*l.*

*Health of Seamen.*—The most laudable attention is paid in the navy, not to the discipline merely, but also to the health and comfort of the men. They are liberally supplied with provisions and grog; and are much less exposed to fatigue, privations, and the risk of shipwreck, than the crews of merchant ships. Formerly the crews of all ships bound on long voyages, or which could not be regularly supplied with fresh provisions, were liable to suffer dreadfully from the scurvy. But this disease can no longer be said to exist in the navy. That the use of citric acid or lemon-juice was a specific against the attacks of this disease, had been ascertained so early as 1600; but the experiment made little impression at the time, and was forgotten till public attention was again called to it, in 1757, by the justly celebrated Dr. Lind. At length, after successive experiments had demonstrated its efficacy, it was ordered, in 1795, that no ship should be allowed to sail on a long voyage without an ample supply of lemon juice, an allowance of which is regularly served out to the men. Since this period, scurvy may be said to be almost banished from the list of diseases incident to seafaring men. In proof of the efficacy of this specific, we may mention that during the blockade of Brest by Lord St. Vincent, from the 27th of May to the 26th of December, 1800, only 16 out of the 16,000 men in the fleet under his lordship's command were sent to the hospital during this whole period, though they had only ordinary ships' provisions.—(Art. NAVY, *Supp. to Ency. Britannica.*)

"From the official returns," says Sir John Barrow, "collected by Sir Gilbert Blane, M. Dupin, a French author, well versed in naval subjects, has drawn out the following table, which exhibits, at one view, the progressive diminution of sickness, death, and desertion, in the British navy, calculated on 100,000 men:—

| Years. | Sent Sick to Hospital. | Deaths. | Desertions. |
|--------|------------------------|---------|-------------|
| 1779   | 40,815                 | 2,654   | 1,494       |
| 1782   | 31,617                 | 2,222   | 993         |
| 1794   | 25,027                 | 1,164   | 662         |
| 1804   | 11,978                 | 1,606   | 214         |
| 1813   | 9,336                  | 698     | 10          |

"Hence it would appear that the diminution of sick and of deaths has been in the proportion of 4 to 1 nearly, between the years 1779 and 1813. The diminution of desertions from the hospital in the same

period is not less remarkable; and it affords, at the same time, the strongest proof of the progressive amelioration of the condition of seamen on board British ships of war. Indeed, whether on board ship, or in any of these noble institutions, the naval hospitals, which are established at all the principal ports at home, and in the colonies abroad, the attention that is paid to the sick sailor is above all praise. The seamen are sensible of this, and nothing keeps them back from volunteering their services, and from giving a preference to a king's ship over a merchantman, but the temptation of high wages offered by the latter in time of war, and that love of liberty and free scope for roving which are characteristic of seamen."—(ART. NAVY, *Supp. to Ency. Britannica*.)

#### CHAPTER IV.—CRIMES, PUNISHMENTS, AND PRISONS.

I. *Crimes and Punishments*.—By crimes are meant, taking the phrase in its widest legal meaning, such violations of any existing law or rule of conduct, as are punishable by the infliction either of corporal or other penalties. But such breaches of the law as are punishable by a pecuniary penalty, recoverable on summary conviction by a justice of the peace or police magistrate, are usually termed offences; while those graver breaches of the law which are made the subject of an indictment, and prosecuted before a jury, are designated crimes. And of these there are two degrees, *misdemeanors* and *felonies*; the former being punishable at common law by fine or imprisonment, or both.

Felony, which is a term of extensive use in the English criminal law, is defined by Blackstone to be "An offence which occasions a total forfeiture of either lands or goods, or both, at common law; and to which capital or other punishments may be superadded according to the degree of guilt" (iv. 95). It consequently is employed to designate a very wide range of offences; embracing all those, such as murders, petit-treasons, sodomy, &c., that are at present punished capitally; with rape, arson, manslaughter, piracy, larceny and other crimes, which, though of a very grave character, are no longer punishable by death.

The term felony, though involved in a good deal of obscurity, seems to be of feudal origin, and to have originally signified the act or offence by which an estate or fief was forfeited and escheated to the lord. And hence we may easily trace the reason why, upon the introduction of the feudal law into England, those crimes which induced such forfeiture or escheat of lands, (and by a small difference from the original sense, such as also induced the forfeiture of goods,) were denominated felonies. Thus it was said that suicide, robbery, and rape, were felonies; *i. e.* the consequence of such crimes was forfeiture, till by long use we began to signify by the term felony the actual crime committed, and not the penal consequences. (*Blackstone*, iv. 97.)

Blackstone divides offences against the laws of England into five classes. 1. Those which affect God and religion; 2. Such as violate or transgress the law of nations; 3. Such as more especially affect the

severeign power of the state, or the king and his government; 4. Such as more directly infringe the rights of the public; and, 5, Such as infringe the rights of private individuals.

1. The offences in the first class are now but few. In the progress of civilisation, attempts to enforce systems and rules of faith by penal statutes have been gradually disused, and an almost universal toleration, or rather freedom, exists as to religious matters. Blasphemy, however, or the denying the being or providence of the Almighty, as well as profane scoffing at the Holy Scriptures by exposing them to contempt and ridicule, continue to be offences punishable by fine and imprisonment, as is the reviling the ordinances of the established Church. Simony, or the corrupt presentation of any one to an ecclesiastical benefice for gift or reward, Sabbath-breaking, drunkenness, &c., also rank among offences of this class.

2. Offences against the law of nations, so far as they are recognised by the English law, are, (1.) Violations of safe conducts; (2.) The infringement of the rights of ambassadors; and, (3.) Piracy. The first two offences are of such rare occurrence, that it is unnecessary to notice them. Piracy, if committed by a subject, was held by the common law to be a species of treason, as being contrary to his natural allegiance; and if committed by an alien, felony; but, by the statute of treason, 25 Edw. III. c. 2, it was made felony in the case of a subject. Formerly this offence was cognisable by the Admiralty Court; but as it proceeds by the rules of the civil law without the intervention of a jury, the trial of piratical offences has been transferred to the ordinary criminal courts.

The offence of piracy consists at common law in committing those acts of robbery and depredation on the high seas which, if committed upon land, would amount to felony. By statute, some other offences are made piracy also, as by 11 & 12 Will. III. c. 7, 8 Geo. I. c. 24, and the 18 Geo. II. c. 30, any natural-born subject or denizen, who in time of war shall commit hostilities at sea against any of his fellow subjects, or assist any enemy on that element, any commander or other seafaring person betraying his trust and running away with any ship, ordnance, ammunition, &c., or delivering them to a pirate, or aiding and abetting those who do, or trading with known pirates, or in anywise confederating or corresponding with them, is liable to be classed with pirates, and convicted as such; and more recently, British subjects assisting in the conveying away of persons to be dealt with as slaves, are to be deemed guilty of piracy, felony, and robbery. The punishments to be inflicted on this description of criminals have been regulated and defined by the 1 Vict. c. 88.

3. The next species of crime consists of those which affect the supreme executive power, or the king and his government. These may be distinguished into three kinds. (1.) Treason; (2.) Felonies injurious to the king's prerogative; and, (3.) Other misprisions and contempts not amounting to treason. The offence of treason, as defined by 25 Edw. III. stat. 15, extends not merely to the compassing the death of the king, but also of his queen, or their eldest son and heir; the violating the king's consort, or the king's eldest daughter unmarried, or the consort of the king's eldest son and heir; the levying

war against the king in his realm, or being adherent to the king's enemies in his realm, or giving them aid. The Act further declares it to be treason for a man to counterfeit the king's great or privy seal, or his money, or to bring false money into the realm, as also to slay the chancellor, or the king's justices, being in their places, or doing their offices. Many other offences have since been made treason by various statutes. These are principally such as are directed against maintaining the Papal jurisdiction in this realm; falsifying the coin, or royal signatures; and such as are created for the security of the Protestant succession in the House of Hanover. The punishment for this offence is capital; and may, by the 54th Geo. III. c. 146, be carried into execution at the option of the Crown, either by hanging or beheading.

The second species of crimes of this class, or of felonies injurious to the king's prerogative, comprises offences relating to the coin not amounting to treason; offences against the king's council; the offence of serving a foreign prince; of embezzling or destroying the king's armour, or stores of war; and of deserting from the king's armies in time of war. Felonies originally comprised, as the reader has already seen, all crimes punishable by forfeiture, and were for the most part capital. But the number of capital felonies has, of late years, been much reduced.

The third species of offences, more immediately against the king and government, are entitled misprisions and contempts.

Misprisions (a term derived from the old French, *mespris*, a neglect or contempt) are, in the acceptance of our law, generally understood to be all such high offences as approach to, but are under, the degree of capital. They are generally divided into two sorts; negative, which consist in the concealment of something which ought to be revealed; and positive, which consist in the commission of something which ought not to be done.

Of the first kind are misprisions of treason or felony; the punishment for the first of which is loss of the profits of lands during life, forfeiture of goods, and imprisonment for life. The punishment of the latter is, in a public officer, imprisonment for a year and a day; in a common person, imprisonment for a less period; and in both, fine and ransom at the king's pleasure.

Misprisions which are positive are generally denominated contempts or high misdemeanors: among these are to be classed all such high state offences as are usually made the subject of impeachment, and of which the punishment falls short of death. Disobeying the king's writ or summons, speaking or writing against the king's person or government, or doing anything that may lessen him in the esteem of his subjects; the denying his right to the crown, &c., are offences of this class, and punishable by fine and imprisonment. Striking in the king's palace and courts of justice is also a high contempt; and is, in the latter case, punishable by fine and imprisonment. This offence also includes injurious treatment of such as are under the protection of a court of justice, which is punishable in the like manner.

In consequence of the repeated attempts that had been made, probably by insane parties, to fire at Her Majesty, it has been enacted by

the 5 & 6 Vict. c. 51, that any person presenting any gun or other instrument, whether containing explosive materials or not, or who shall produce any arms or dangerous materials near Her Majesty, with intent to injure or alarm her, shall be guilty of a high misdemeanor, and may be transported for seven years, or imprisoned for not more than three years, and whipped not more than three times.

4. The next class of offences includes those which infringe the rights of the public. The principal of these are offences against public justice, public peace, public trade, public health, and the public police or economy. Offences against public justice are the embezzling, vacating, or falsifying the records in a court of justice, which are felonies; obstructing executions of process, aiding a prisoner in effecting his escape, receiving stolen goods, stirring up quarrels, compounding informations, conspiracies, perjuries, &c., which in general are punishable by fine and imprisonment, and in some cases by transportation.

Offences against the public peace are principally riots, unlawful assemblies, affrays, riding or going armed to the terror of His Majesty's subjects, challenges, libels, &c., which, like the former, are punishable by fine and imprisonment; some offences of this class, indeed, as the riotous assembly of twelve persons or more, and not dispersing upon proclamation, sending threatening letters, demanding money, or threatening to kill any of His Majesty's subjects, pulling down or destroying any locks, sluices, or flood-gates, erected by authority of parliament on a navigable river, destroying any turnpike gates, &c., are made felonies by Act of Parliament; and in some cases are capital, but in general are punishable by transportation.

Of offences against public trade, the principal is smuggling, which, unless force be resorted to, is punishable by fine, and the forfeiture of the goods; but all forcible acts of smuggling are punishable by transportation or imprisonment (8 and 9 Vict. c. 8). The other offences of this class are in general misdemeanors only, and punishable as such by fine and imprisonment. The principal are frauds of various kinds. The offences, if so we may call them, of forestalling and engrossing, were formerly prohibited by several statutes under severe penalties. These, however, were repealed in 1772. But the offences still continue to be punishable at common law. The last conviction on a charge of this sort took place during the scarcity of 1800; and it is difficult to suppose that any jury would now be found to convict any one accused of such practices. The last class of the offences we are now speaking of, consists of those against the public health, and the public peace or economy. Under this head may be ranked the infringement of quarantine regulations, selling unwholesome provisions, common nuisances, such as obstructing highways, keeping disorderly houses, &c., most of which offences are punishable by fine, and in some, sureties are required to be given that the offence shall not be repeated.

5. The last class of offences are those which affect the rights of private individuals, being principally directed against their persons, their habitations, and their property. Of the crimes injurious to their persons, the highest is murder, or the unlawfully killing any reasonable

creature with malice aforethought. In all civilised countries it is punishable by death. Mayhem,\* rape, forcible abduction, and unnatural crimes used, also, to be punished capitally; but with the exception of the latter, these crimes are now punishable only by transportation and imprisonment. The change, however, is one of which the policy, especially in the case of rape, is extremely doubtful. The inferior offences of this class are manslaughter, homicide, assault, battery, wounding, false imprisonment, and kidnapping; which, for the most part, are punishable by fine and imprisonment.

The offences which more immediately affect the habitations of individuals are arson and burglary. The first consists in maliciously setting fire to a dwelling-house, or to any out-houses connected with one, though not parcel thereof, as stables, barns, &c. This crime, we are sorry to say, has increased very much of late years. It has principally prevailed in the agricultural districts, especially in the south of England; and seems to have grown out of a hostile state of feeling between the farmers and labourers, occasioned partly, and principally, perhaps, in the abuses that have originated in the mal-administration of parochial affairs, and of the poor laws. But to whatever causes it may be owing, it is a crime of the most dangerous character, being very difficult to guard against, involving frequently the extensive destruction, not merely of property but of life, and, consequently, affording the greatest scope for the gratification of the malignant propensities. The removal of the causes in which it appears to have originated, and the diffusion of really useful education among the rural population, are the only means, perhaps, to be looked to for the complete eradication of this detestable crime. In the mean time it is properly punished with great severity, on the principle laid down by Cicero, that *ea sunt animadvertenda peccata maxime, quæ difficillime præcaventur*. (*Oratio pro Sexto Roscio*, § 40.) The Act 1 Vict. c. 89, makes the malicious setting on fire of any dwelling-house, any person being therein, a felony, punishable by death; and the malicious setting on fire of offices, shops, ricks, &c., is a felony, punishable at the discretion of the court, by transportation for life, or for not less than fifteen years, or by imprisonment for any term not exceeding three years.

Burglary (called in Scotland *hame suchen*, as it anciently was in England) consists in breaking forcibly into a dwelling-house in the night, with intent to steal. At common law it is a capital offence; but, unless violence be used, the punishment is transportation or imprisonment. (1 Vict. c. 86.)

The remaining species of offences of this class are those more immediately affecting private property. These are, larceny, malicious mischief, and forgery. The first, indeed, constitutes by far the greater proportion of offences at the present day. Offences attended with personal violence are always found to diminish as civilisation advances. The commissioners appointed to inquire into the state of the police of the metropolis, in their report made in 1819, state, that from returns

\* Mayhem is the violently depriving another of such of his members as may render him the less able in fighting, either to defend himself or to annoy his enemy. —(*Blackstone*, book iv., cap. 15.)

laid before them, it appeared that in the thirty years from 1755 to 1784, the whole number of convictions for murder in London and Middlesex amounted to 71. In the thirty years between 1784 and 1814, to 60. In the years 1815, 1816, and 1817, they amounted to 9; and in the three years immediately preceding 1814, to 14; and it is material to observe that the diminution is a good deal greater than appears from this statement, inasmuch as the population of the metropolis about doubled in the interval between 1755 and 1817. The offence of larceny is of two kinds: (1.) Simple larceny; and, (2.) Mixed or compound larceny. Simple larceny is plain theft, unaccompanied by any other atrocious circumstance. The latter includes in it the aggravation of taking from the house or person. Formerly this offence was designated either grand or petit larceny, according to the value of the thing stolen; the former being the technical description, if the value exceeded, 12*d.*; the latter, where it did not amount to that sum. But the statute 7 & 8 Geo. IV. c. 29, has abolished the distinction between the two; and every larceny, whatever be the value of the property stolen, is made subject to the same incidents as grand larceny. By the ancient Saxon law, theft was nominally punished with death, where the property stolen was above the value of 12*d.*; the criminal being permitted to redeem his life by a pecuniary ransom. In the 9th Hen. I. this power of redemption was taken away, and all persons guilty of larceny above 12*d.* were directed to be hanged; and grand larceny, or stealing above 12*d.*, continued, notwithstanding the representations of many learned and able men against such severity, to be liable to the punishment of death until the passing of the statute now mentioned. It abolished the distinction between the two sorts of larceny, making every theft, whatever might be the value of the property stolen, (except as otherwise provided by the Act,) punishable by transportation for not less than seven years, or by imprisonment, with hard labour and solitary confinement, for any length of time not exceeding two years; and in the case of a male, to being once, twice, or thrice, publicly whipped in addition to such imprisonment. (See also the Act 7 Will. IV., and 1 Vict. c. 90.) Persons convicted of misdemeanors punishable under the Act may be sentenced to imprisonment and hard labour in the common gaol, or house of correction, and may also, if thought proper, be kept in solitary confinement. Mixed, or compound larceny, is by the same Act made liable to transportation for life, or for a term of years not less than seven, at the discretion of the court.

Robbery, *i. e.*, the forcibly taking away of property from the person of another, if accompanied by cutting or wounding, is a capital offence (7 Will. IV. and 1 Vict., cap. 87); if accompanied with violence merely, it is punishable by transportation or imprisonment; as are assaults with intent to rob, or the demanding money or property of any sort, if the demand be accompanied by threats or menaces.

Malicious mischief may be very shortly noticed. It consists in wantonly damaging another person's property, as arson does the setting another person's dwelling-house on fire, and is punishable under various statutes according to the nature of the offence, generally by transportation or imprisonment.

The remaining offence of this class is forgery, which *Blackstone*

defines to be "the fraudulent making or alteration of a writing to the prejudice of another man's right." At common law this offence was punishable by fine, imprisonment, and the pillory; but by statutes passed at various times, and in particular since the Revolution (when paper credit was first established), forgeries were in general made subject to capital punishment, and so continued until the passing of the Act already alluded to, the 7 and 8 Geo. IV., and the 2 and 3 Will. IV., which substituted transportation for life, or years, in all cases, with the exception of forgeries of wills and powers of attorney for the transfer, or to receive the dividends, of any public stock, which offences continued to be punishable by death. But the 1st Victoria, cap. 84, abolished the punishment of death for the forgery of wills, and powers of attorney to transfer stock, or receive dividends; the substitutes being transportation for life, or for any term not less than seven years, or imprisonment, with or without hard labour, for a term not exceeding four years, nor less than two.

Offences under the game laws have long formed, and still continue to form, a very large, and also an increasing class. *Blackstone* deduces the origin of the game laws from the forest laws. Both these codes, he says, "were founded upon the same unwarrantable notions of permanent property in wild creatures; and both were productive of the same tyranny to the commons: but with this difference, that the forest laws established only one mighty hunter throughout the land, whereas the game laws have raised a little Nimrod in every manor." (IV. 416.) This, however, is a subject with which it is more difficult to deal than the learned commentator would seem to have supposed. Down to a late period none but qualified persons, that is, persons who had a heritable landed estate of the value of 100*l.* a-year, or an estate for life, or for 99 years and upwards, of 150*l.* a-year, were entitled to take or kill game; meaning thereby, hares, partridges, pheasants, grouse, heath or moor game, black game, and bustards; and, in some respects, snipes, woodcocks, quails, landrails, and conies. But this oppressive restriction was repealed by the Act 1 and 2 Will. IV., c. 32, which vests the right to kill game in the owners of land, or those who have their permission, provided they take out a game licence from the Board of Stamps and Taxes. We confess we do not see on what grounds the principle of this Act can be fairly objected to. It is true that there always will be in the public estimation a wide difference between the offence of clandestinely killing game, or animals *feræ naturæ*, and killing such as are domesticated. A particular partridge or hare cannot be discriminated from other partridges or hares; and it may, by a volition of its own, enter the estates of 10 or 20 different landlords, and, consequently, may belong to each of them in the course of a single day. And such being the case, it is impossible that any one of these landlords can have that perfect and equitable right of property in the animal he would have possessed had it been susceptible of identification, and been reared by his care and at his expense, and confined within his estate. It is, in consequence, quite idle, do what you will, to expect to make the public view the practice of poaching, or the unlawful taking of game, as involving any considerable degree of criminality. It is, in fact, all but universally looked upon in nearly

the same light as smuggling, that is, as the result of arbitrary and oppressive laws; being, when unaccompanied with violence, deemed a mere venial offence; and hence its diffusion.

On the other hand, however, it is not to be endured that individuals, whether armed or not, should be allowed to enter, without let or hindrance, on the estates of others in search of game or of anything else. The admission of any such principle would subvert the right of property, and be productive of the most calamitous results. There may, however, be an abuse as well as a fair and justifiable exercise of this right; and those landlords who are "strict game preservers," appear to us to be chargeable with such abuse. By filling their estates or preserves with animals *feræ naturæ*, which are in great request, and which the public do not regard in the same light as other property, but as rightfully belonging to the captor, they create an overwhelming temptation to the commission of offences against the game laws; and are substantially and truly responsible for nine-tenths of the mischief and misery they occasion. Estates or preserves swarming with game are neither more nor less than public nuisances that ought to be abated. And this might be easily done by imposing such a rate of duty on gamekeepers and others employed to preserve game as would make them too expensive to be kept by any but the most opulent individuals. With the decline in the quantity of game, or, which is the same thing, in the temptation to engage in poaching, the offence, and all the bad consequences inseparable from it, would proportionally diminish.

The great number of crimes, which it will be seen from the preceding statements were subject to capital punishment, long rendered the English law obnoxious to the charge of being sanguinary. But, though formally recorded, the punishment of death was, in comparatively few instances, carried into execution; the royal mercy being in the majority of cases extended, at the suggestion of the judge who presided at the trial, to the criminal, whose sentence was commuted to transportation, or some less serious penalty. Still, however, the infliction of capital punishments was much more frequent than was suitable to the spirit of the age; and the system was besides liable to many objections. It made the description of punishment by which offences were visited a matter of lottery rather than of anything else, some being punished with disproportionate severity, while others escaped with a comparatively slight visitation. This uncertainty had a most unfavourable operation. Criminals, calculating upon the chances of getting off, even if convicted, with some mitigated punishment, were less indisposed to commit an offence than if the statutory penalty for it had been milder and more rigidly enforced. Inasmuch, too, as individuals were every now and then left for execution for offences which, in the public estimation, did not deserve so severe a punishment, injured parties were not unfrequently disinclined to prosecute, and witnesses to give evidence; and juries sometimes went so far, in convicting for theft, as to find the culprit guilty only of stealing property below the value which enforced a capital punishment, though in point of fact, its real value might be a hundred or a thousand times that amount!

Perhaps, however, nothing did so much to excite the public feeling

defines to be "the fraudulent making or alteration of a writing to the prejudice of another man's right." At common law this offence was punishable by fine, imprisonment, and the pillory; but by statutes passed at various times, and in particular since the Revolution (when paper credit was first established), forgeries were in general made subject to capital punishment, and so continued until the passing of the Act already alluded to, the 7 and 8 Geo. IV., and the 2 and 3 Will. IV., which substituted transportation for life, or years, in all cases, with the exception of forgeries of wills and powers of attorney for the transfer, or to receive the dividends, of any public stock, which offences continued to be punishable by death. But the 1st Victoria, cap. 84, abolished the punishment of death for the forgery of wills, and powers of attorney to transfer stock, or receive dividends; the substitutes being transportation for life, or for any term not less than seven years, or imprisonment, with or without hard labour, for a term not exceeding four years, nor less than two.

Offences under the game laws have long formed, and still continue to form, a very large, and also an increasing class. *Blackstone* deduces the origin of the game laws from the forest laws. Both these codes, he says, "were founded upon the same unwarrantable notions of permanent property in wild creatures; and both were productive of the same tyranny to the commons: but with this difference, that the forest laws established only one mighty hunter throughout the land, whereas the game laws have raised a little Nimrod in every manor." (IV. 416.) This, however, is a subject with which it is more difficult to deal than the learned commentator would seem to have supposed. Down to a late period none but qualified persons, that is, persons who had a heritable landed estate of the value of 100*l.* a-year, or an estate for life, or for 99 years and upwards, of 150*l.* a-year, were entitled to take or kill game; meaning thereby, hares, partridges, pheasants, grouse, heath or moor game, black game, and bustards; and, in some respects, snipes, woodcocks, quails, landrails, and conies. But this oppressive restriction was repealed by the Act 1 and 2 Will. IV., c. 82, which vests the right to kill game in the owners of land, or those who have their permission, provided they take out a game licence from the Board of Stamps and Taxes. We confess we do not see on what grounds the principle of this Act can be fairly objected to. It is true that there always will be in the public estimation a wide difference between the offence of clandestinely killing game, or animals *feræ naturæ*, and killing such as are domesticated. A particular partridge or hare cannot be discriminated from other partridges or hares; and it may, by a volition of its own, enter the estates of 10 or 20 different landlords, and, consequently, may belong to each of them in the course of a single day. And such being the case, it is impossible that any one of these landlords can have that perfect and equitable right of property in the animal he would have possessed had it been susceptible of identification, and been reared by his care and at his expense, and confined within his estate. It is, in consequence, quite idle, do what you will, to expect to make the public view the practice of poaching, or the unlawful taking of game, as involving any considerable degree of criminality. It is, in fact, all but universally looked upon in nearly

detering others by the fear of punishment from the commission of offences (*ut pœna ad paucos, metus ad omnes perveniat*.—Cicero pro Cluentio), may be supposed to be involved in this question, we incline to think that transportation is of all punishments the least effectual. This is a case in which the maxim *de non apparentibus et de non existentibus eadem est ratio* is strictly applicable. A punishment that is to be carried into effect at the Antipodes is too remote, and its infliction depends, in the belief of every one, on too many contingent circumstances, to have any sensible influence. Were offenders, who are to be transported, subjected to some degrading penalty, such as public whipping, before leaving England, the case might be different; but as it is, banishment has little or no effect in deterring from crime.

*Returns of Crimes.*—We have subjoined the official returns of the various offences committed for some years past, which will give some idea of the state of crime in the country. In many respects, however, these returns are not what could be wished for. Their arrangement, considered in a scientific point of view, has been much, and, we think, justly objected to. The object in making a table of offences should, as much as possible, be directed to the grouping or bringing together under the same head, of those that spring from the same motives, or from the indulgence of the same passion; inasmuch as the hopes of repressing crime must depend principally on the means of obviating or counteracting the causes in which it originates: but, in the tables below, this distinction is very imperfectly attended to. The most discordant crimes, to give only one example, are classed together under the first head, or that of "offences against the person." Premeditated murder, to gratify a malignant disposition, or to acquire property, murder committed in a sudden fit of anger, occasioned by some gross provocation, rapes with or without murder, assaults on peace-officers employed to quell a riotous assembly, or to detect or prevent some smuggling transactions, attempts to procure abortion, bigamy, child-stealing, and so forth, are all huddled together under this head, though the character of the crimes, and the motives which led to them, be as different as it is possible to imagine. The same is the case with the other divisions. The classification has been made to depend, in every instance, too much on the crime abstractly considered, or on the mode in which the vicious propensity was indulged, and too little on the circumstances in which it arose, or on the nature of the propensity that led to it. No doubt it is easier to point out a defect than to suggest a remedy; but the importance of the subject, and the countenance which the present classification gives to erroneous reasoning and to bad or defective systems of criminal legislation, require that no means should be left untried to have offences classified on some more correct principle.

A most important return in the statistics of crime would be one showing the number of each class of offences committed, with the number of instances in which detection and punishment followed. In the country it might be difficult to procure a return of this sort; but in London, and other great towns, where the police have notice of almost all offences, one should think it might be procured sufficiently exact for most practical purposes.

We may further observe, that many false inferences have been drawn from comparing together returns as to the state of crime in different countries, and in the same country at different periods. Such returns are obviously good for nothing, except to deceive and mislead, unless the classification of offences in the countries and periods compared together were the same, and unless the police and the laws were similar, the former possessing nearly the same vigilance, and the latter being enforced with about the same precision. But it is needless to say that the greatest discrepancy obtains in all these particulars. The classification of offences is not the same in any two countries, and it is perpetually varying even in the same country. The greatest differences are, however, to be found in the state of the police, and the administration of criminal justice in different countries and periods. Were one to compare the returns of committals in a place without a police, with the returns from the same place after a police had been established, or the returns under an inefficient with those under an efficient police, there would, we doubt not, appear to be an extraordinary increase of crime; whereas the fair presumption is, that, instead of being increased, it is not a little diminished. The cause of the excess is obvious. It results entirely from the circumstance that many offences that formerly escaped all public notice have latterly been brought under the cognizance of the tribunals; though it is, at the same time, abundantly certain that this greater vigilance must have materially diminished the real number of offences. Unless, therefore, we are well assured that the classification of crimes, the activity of the police, and the spirit of the tribunals are nearly the same in the countries and æras for which we have returns, little or nothing that is to be depended on can be learned from comparing them together. Much of that extraordinary increase of crime that is said to have taken place in Great Britain within the last twenty years is, there is good reason to think, apparent only, and is mainly occasioned by the bringing of more crimes to light through the superior organisation of the police, and the more rigid enforcement of the law. During the war, and for some years after, the police was comparatively inefficient; and many offences that would now be visited by a pretty severe punishment, were passed over without any public notice, on the offender consenting to enter the army or navy. We do not, however, mean by this to say that there has been no increase of crime since 1815; offences against property have, no doubt, increased during that interval; but we doubt whether their real increase has materially exceeded that of the population; and whether all the excess be not ascribable to the circumstances now alluded to, that is, to the extension and greater vigilance of the police, and the stricter enforcement of the law.

The frequency of crime is, also, materially dependent on the state of the country at the time with respect to employment and subsistence. In years when there is a brisk demand for labour, or when wages are good and provisions low priced and abundant, there is always a considerable decrease of crime; and, conversely, when employment is scarce, wages low, and provisions deficient and dear. It is in the circumstances now specified that we are to seek for an explanation of the very considerable diminution in the number of commitments in 1844 and 1845, compared with those in 1841 and 1842.

1. Table showing the Total Number of Persons Committed for Trial or Bailed, in each County of England and Wales in 1845, with the Result of the Proceedings.

| County.                   | Total Number of Offenders | Convicted.                   |                             |          |          |                            |                                                         |                            |                     |                            |                     | Issue to be detained. | Acquired.                    |                            |                      | Execution of Capital Sentences, or Commutation of Pardon recommended by the Judge. |                 |        |            |                            |                     |                            |                     |                            |                     |                            |                     |                            |                     |                            |                     |

## VIII.—STATE OF CRIME IN IRELAND.

The state of crime for a series of years, according to the annual returns of the Inspectors-General of Prisons, was as follows :—

| Years. | Number charged with Crime. | Total Convictions. | Sentences, least and greatest.    |          | Executions. | Proportion of Convictions to Population. |
|--------|----------------------------|--------------------|-----------------------------------|----------|-------------|------------------------------------------|
|        |                            |                    | 6 Months' Imprisonment and under. | Capital. |             |                                          |

By a new arrangement of the returns, adopted in 1837, the slighter cases, decided summarily at Petty Sessions and before magistrates, were distinguished from the graver brought before the Quarter Sessions and Assizes, as in the following table :—

| Years. | Summary Convictions. |              | Number of Cases at Assizes and Quarter Sessions. | Total Convicted. | Sentences at Assizes, least and greatest. |          | Executions. | Proportion of Convictions to Population. | Increase or Decrease per Cent. |
|--------|----------------------|--------------|--------------------------------------------------|------------------|-------------------------------------------|----------|-------------|------------------------------------------|--------------------------------|
|        | Petty Offences.      | Drunkenness. |                                                  |                  | 6 Months' Imprisonment and under.         | Capital. |             |                                          |                                |

*Prisons and Prison discipline.*—Our limits enable us to do little more than advert to the more prominent circumstances which have led to the improvement of prisons in this country, the principal enactments which have been passed for their regulation, and the general character of the systems of prison discipline which now claim the attention of the public.

In 1773 the philanthropic Mr. Howard became high sheriff of Bedfordshire, and in the discharge of his duties as such, was deeply affected by the miserable state of the inmates of the prisons under his care. On extending his inquiries, he found that the gaols throughout England were in a lamentable condition; and being earnestly impressed with a deep sense of the duty of alleviating the sufferings he had witnessed, he determined to devote his energies to the examination and reform of these abodes of wretchedness.

At that period the gaols were, with few exceptions, depositories of pestilence, and entirely neglected by those under whose jurisdiction the law had placed them. Many consisted merely of small, filthy, and unventilated dungeons. The prisoners were, in too many cases, subjected to the exactions of tyrannical gaolers, loaded with fetters, immured in loathsome cells, deprived of proper and sufficient food, air, and exercise; and to this treatment were exposed, in common with all others, the prisoners before trial, whom the law presumes innocent of crime. To their personal sufferings were added the most serious of moral evils. In the absence of control, inspection, employment, and religious instruction, imprisonment could not fail to debase and harden, while it was at variance with the primary objects of penal justice.

For the eradication of the gaol distemper (a fatal malady from which few of our prisons were exempted), and the removal of many physical evils in the condition of the prisoner, the country is indebted to the persevering labours of this great philanthropist. The impression which his eminent services produced upon the public mind was, for a time at least, happily great. The attention of the legislature and the magistracy was awakened to the necessity of amending the laws for the government of prisons, and of personally superintending their management. The circumstances of the times combined also to enhance, in the public estimation, the importance of these investigations. The loss of the American provinces had deprived the government of the long accustomed channel for the disposal of convicts sentenced to transportation; and it was thought that many classes of offenders, heretofore sent abroad, might be corrected and reclaimed by imprisonment at home. In conformity with these views, an Act was passed in 1778 (19 Geo. III., c. 74), "to explain and amend the Laws relating to the Transportation, Imprisonment, and other punishment of certain Offenders." The main object of this measure was the establishment of penitentiary houses in this country; and the framing of the enactment was confided to Mr. Howard, Mr. Justice Blackstone, and Sir William Eden.

It is worthy of remark that, in determining upon the nature of the discipline to be enforced in the penitentiary houses contemplated by this statute, these eminent men concurred in recommending the separation of the prisoners from each other. In the 5th section of the

Act it is said that, "if many offenders convicted of crimes for which transportation has been usually inflicted, were ordered to solitary confinement, accompanied by well-regulated labour and religious instruction, it might be the means, under Providence, not only of deterring, but also of reforming the individuals, and inuring them to habits of industry." Differences of opinion occurred among the supervisors appointed to carry this Act into effect, and the erection of penitentiary houses was not at that time proceeded with; but this circumstance did not check the spirit that was abroad for the improvement of the prison laws. The attention of the legislature having been directed to the deplorable state of the prisons generally, an Act was passed in 1781 (22 Geo. III., c. 54), "for amending and rendering more effectual the Laws then in being relative to Houses of Correction." In this statute, also, the legislature sanctioned the separation of prisoners. Houses of correction on the separate principle were erected at Horsham and Petworth, and in their construction every arrangement was made, in the view of carrying that principle into complete effect. Precautionary measures were taken against the transmission of sound from cell to cell. Cells sufficiently spacious for one individual, with a water-closet attached to each cell, were provided. There were separate stalls in the chapel, separate boxes for those who laboured together, and separate airing yards. Encouraged by the successful administration of the separate system in those prisons, the magistrates of Gloucestershire, in 1785, applied for and obtained an Act for the erection of a penitentiary in that county. This prison was completed in 1790. Each prisoner had a separate cell, a room to sleep in, and another in which he was employed alone during the day; and although the separation was not carried out so completely as could have been desired, the discipline was attended with good effects. For a period of twenty years, during which the prisoners were separately confined, no single instance occurred in which the degree of solitude imposed was productive of any unfavourable result. Under the operation of this system at Horsham, Petworth, and Gloucester, we have the strongest testimony that the re-committals had nearly disappeared. The health of the prisoners was excellent; their mental faculties unimpaired; their labour cheerful and constant; their behaviour orderly and submissive; and their moral and religious improvement satisfactory. But no sooner was the system broken in upon at these prisons, by the increase of population, and it became impracticable to continue to confine each prisoner in a separate cell, than these beneficial effects ceased to be apparent. The actual state, however, of the prisons generally throughout the kingdom was but little affected by these enactments and the plans which had been partially adopted for the introduction of an improved system. The more flagrant of the physical sufferings which Mr. Howard had exposed were no sooner alleviated than the interest which his labours had excited in great measure ceased. The prisons remained in a disgraceful state. Many dungeons still existed; and the health and even lives of prisoners were often sacrificed to the want of cleanliness and proper ventilation. The moral effects of imprisonment were most injurious. All classes, the young and old, the untried and convicted, the inexperienced and har-

dened, and in many cases even the sexes, were indiscriminately associated, without employment, and allowed to indulge in nearly every species of corrupt intercourse. The attention of the legislature was drawn to the subject from time to time by the inquiries of parliamentary committees, and also by the reports of the "Society for the Improvement of Prison Discipline."\* The information collected from these sources showed the necessity of further legislation; and an Act was accordingly passed in 1823 (4 Geo. IV., c. 64) "for consolidating and amending the Laws relating to the Building, Repairing, and regulating of certain Gaols and Houses of Correction in England and Wales." This Act extends to all county gaols, and to seventeen of the largest prisons under corporate jurisdiction. For the regulation of all other prisons belonging to cities and boroughs, an Act was passed in the following year (5 Geo. IV., c. 84), which relieves the smaller places of confinement from many of the provisions of the preceding Act.

It cannot be too deeply lamented, that the authors of this enactment (excellent as it is in most of its provisions) should have departed from the enlightened views of prison discipline contained in the Acts of the 19, 22, and 25 Geo. III., to which we have referred; and that, instead of adhering to the plan of individual separation, which was so strenuously advocated by the early reformers of prison discipline, as the only means of preventing the corrupt intercourse of prisoners, and which had proved so successful, the framers of this statute should have had recourse, as a substitute, to the division of prisoners into classes. By the 10th section, rule 16, it is enacted, "That the male and female prisoners shall be confined in separate buildings or parts of the prison, so as to prevent them from seeing, conversing, or holding any intercourse with each other; and the prisoners of each sex shall be divided into distinct classes, care being taken that prisoners of the following classes do not intermix with each other:—In gaols, first, debtors and persons confined for contempt of court on civil process; second, prisoners convicted of felony; third, prisoners convicted of misdemeanors; fourth, prisoners committed on charge or suspicion of felony; fifth, prisoners committed on charge or suspicion of misdemeanors, or for want of sureties. In houses of correction, first, prisoners convicted of felony; second, prisoners convicted of misdemeanors; third, prisoners committed on charge or suspicion of felony; fourth, prisoners committed on charge or suspicion of misdemeanors; fifth, vagrants. Such prisoners as are intended to be examined as witnesses on behalf of the Crown, in any prosecution, shall also be kept separate in all prisons and houses of correction."

Since the passing of this Act, the scale of classification which it prescribes has been generally observed, at least in the county prisons. We have now, therefore, had the experience of several years as to the effect of classification in preventing moral contamination. And what, we ask, are the results? Are the gaols of this country no longer subject to the reproach of rendering more criminal those whom they ought to correct, and of demoralizing those whom they should reform?

\* Reports of the "Society for the Improvement of Prison Discipline, and for the Reformation of Juvenile Offenders," 1816-1832.

To this inquiry we answer that, with scarcely an exception, the prisons throughout the country inspire no salutary nor permanent dread, and afford, especially in regard to untried prisoners, as great facilities for the corruption of their inmates as they did prior to the passing of this Act. We can be at no loss to ascertain the causes of this failure. And first, we would ask upon what principle is the classification of prisoners to be regulated, in order to prevent contamination? If by the technical character of the imputed offence, it is certain that, as crimes differing widely in magnitude are classed under general terms, prisoners of every variety of character must necessarily be placed together. Even were this not the case, the inefficiency of classification would be apparent from the fact, that many who have been before in prison for serious crimes are subsequently liable to be associated, on their commitment, with persons innocent of the crime imputed to them, and with young and inexperienced offenders.\* If, again, the classification proceed on an assumed knowledge of character, by what means can such knowledge be attained? In the consideration of this question, these evident truths seem not to have had their proper weight. First, that moral guilt is not the immediate subject of human observation; nor, if discovered, is it capable of being so nicely appreciated as to enable us to assign to each individual who may be infected with it his comparative place in the scale; and, if it could be discovered, it would appear that no two individuals would be found contaminated in the same degree. Secondly, that if these difficulties could be surmounted, and a class formed of individuals who had advanced exactly to the same point, not only of offence, but of moral depravity, still their association would produce a further progress in both. It is not in human nature that the mind should be stationary; it must advance in virtue or in vice. Nothing promotes this progress so much as the emulation created by society; and from the nature of that society it will receive its direction. Hence every association of convicts will, in a greater or less degree pervert, but can never reform those of whom it is composed; and we are brought irresistibly to the conclusion that classification, once admitted to be useful, is so in an inverse proportion to the numbers of which each class is composed. We cannot, therefore, wholly escape the evils of communication, unless we effect the complete separation of prisoners from each other.†

To counteract the evils of association in classes, a system has been adopted under which, although prisoners are placed together, they are strictly prohibited by severe punishments, from holding any communication with each other by words, signs, or even looks. This discipline is known by the name of the "silent system;" and as this plan of prison government, and that of individual separation, excite at this time considerable attention, we proceed briefly to state the principal features of the respective systems, and the grounds on which we consider the

\* "I gave up my idea of the value of classification, on seeing a person who was tried for murder and escaped on a point of law, a few days afterwards associated with the cases for assault."—(*Evidence of Samuel Hoare, Esq., before the Prison Committee of the House of Lords.*)

† Third Report of Home Inspectors of Prisons, p. 33.

superiority of the separate system to be established. The silent system fails to prevent mutual intercourse. Under the most vigilant superintendence communications may be carried on by signs, and in a low tone of voice. The knowledge of this fact acts as a spur and incentive to the prisoner's ingenuity, and he is thus encouraged to have recourse to fraud and artifice to evade the prison regulations. The means by which alone the system can be enforced are objectionable, inasmuch as its maintenance depends on the infliction of numerous punishments. These punishments consist in the reduction of food, confinement in dark and ill-ventilated cells, and extra hard labour. The prisoner feels that these sufferings and privations are extra-judicial, that they are over and above the punishment to which he was sentenced by the Court; and hence arise continual irritation, and a strong sense of being subjected to injustice and oppression. Upon the untried prisoner the discipline operates with peculiar hardship. His thoughts, instead of being directed to the preparation of his defence on his approaching trial, are necessarily occupied in learning and obeying the prison regulations, and in endeavouring to avoid the punishments which, from want of attention, he is at any moment liable to incur. The silent system is opposed to the reformation of the prisoner. The close and constant watch to which every act and even look is subjected, the mental irritation produced by the dread or infliction of punishment, have a powerful tendency to banish reflection, prevent self communion, and to close the heart against religious impressions.

The daily assembling of prisoners in sight of each other, notwithstanding that silence may be strictly enforced, exposes them to recognition on their discharge. Reformation is thus discouraged. A man unjustly accused may be ruined for ever in his reputation from the mere circumstance of being placed for a period, however short, with depraved associates. The evils of recognition are encountered, also, by the offender who may be led to repent of his crimes, and may desire to return to honest courses; for, on his discharge, he is liable to constant exposure from his prison companions. Again, the power of recognition operates most injuriously in the case of the hardened convict resolved to persevere in crime. Among such characters acquaintanceship by sight soon ripens into intimacy on leaving the prison, and leads to results alike mischievous to the offender and to the best interests of society. From these objections the system of individual separation is wholly free. Nothing can be more unfair than to confound that system with the ideas which are generally attached to the term "solitary confinement." Separate confinement differs from solitary confinement both in its nature and design. Solitary confinement is universally and correctly understood to be a condition of as unmitigated, uninterrupted seclusion from human society as is practicable, often in dark or gloomy cells of small dimensions, ill-ventilated, often damp, and destitute of those accommodations necessary for the prisoner's convenience, his diet being generally restricted to mere bread and water. Separate confinement is totally different in its nature from this. It differs from it in the following particulars:—In providing the prisoner with a well-lighted and well-ventilated apartment, instead of immuring him in a confined, ill-ventilated, and dark

cell;—in providing the prisoner with everything that is necessary for his cleanliness, health, and comfort during the day, and for his repose at night, instead of denying him these advantages;—in supplying him with sufficient food of wholesome quality, instead of confining him to bread and water:—in alleviating his mental discomfort, by giving him employment; by regular visits of the officers of the prison, of the governor, surgeon, turnkeys, or trades instructors, and particularly of the chaplain, instead of consigning him to the torpor and other bad consequences of idleness, and the misery of unmitigated remorse, resentment, or revenge;—in separating him from none of the inmates of the prison, except his fellow-prisoners, instead of cutting him off, as far as may be, from the sight and solace of human society;—in allowing him the privilege of attending both chapel and school, for the purpose of public worship and education in class (securing on these occasions his complete separation from the sight and hearing of his fellows), instead of excluding him from divine service and instruction;—in providing him with the means of taking exercise in the open air whenever it is proper and necessary, instead of confining him to the unbroken seclusion of his cell. Separate confinement also differs from solitary confinement in its object. The object of separate confinement is the permanent moral benefit of the prisoner; an object which he can plainly see that the system has in view. The object of solitary confinement is solely to punish the prisoner, principally for violating the prison regulations, and that, too, by means always harsh and severe, and often vexatious and exasperating; and this, not to effect a lasting moral benefit to himself, but to uphold the prison discipline at the price of severe bodily and mental suffering.

Under the separate system, an appeal is made to the moral sense and understanding of the prisoner: he is treated as a man, and with the respect and benevolence due to humanity, even in its lowest debasement. Under solitary confinement, on the other hand, the offender is treated as a being divested of the common rights, capacities, and feelings of human nature. It is upon his corporeal frame that the punishment is designed to act; no attempt, or but little, is made to appeal to his reason and conscience. This treatment tends to harden, provoke, and brutalise; whereas the other is fitted and designed to induce reflection, kindness, gratitude, and amendment. In short, separate confinement is the separation of each offender from all communication and association with his fellow offenders, regard being had to his bodily health, his mental sanity, his intellectual improvement, and his amendment, by inculcating industrious habits, and by religious and moral instruction. Solitary confinement is the seclusion of the prisoner, as far as is practicable, from all human society, attended with privations both bodily and mental, which are intended merely to inflict punishment, to subdue obstinacy of temper, and to uphold authority by the operation of pain and fear. It employs harsh measures to effect a temporary purpose.\*

The application of the separate system to the untried has been opposed on the ground of its presumed severity. But by well-regulated minds, the seclusion would be felt as a boon and a protection. The

\* Third Report of Home Inspectors of Prisons, p. 13.

prisoner enjoys the privilege of seeing his friends; has every facility for consulting with his legal adviser; sends and receives letters; is permitted to have unobjectionable books; receives suitable articles of food; has the option of any employment that can be conveniently furnished to him; he is exempted from all discipline that is calculated to create irritation; he is tempted to commit no violation of prison rules; and he is consequently, in a great measure, spared the infliction of prison punishments: he is exposed to no quarrels with, and he is protected from the assaults of, his fellow prisoners: his mind cannot be demoralised by the relations of the burglar, nor by the language of the blasphemous and obscene.

But although, to the untried, separate confinement is a privilege; yet, when strictly enforced, and divested of all indulgences, it becomes the most efficient and salutary of all punishments. The convict is confined alone, by day and by night; in a cell fitted up with every convenience essential to ensure ventilation, warmth, cleanliness, and personal exercise. Whatever is necessary for the preservation of the prisoner's health is strictly attended to; but no indulgence, in any shape, is extended. The distinctions observed in the treatment of the untried and convicted are broad and definite. It has been seen that, under this system, the untried are permitted to receive visits from their connexions; the convicted are prohibited from this intercourse: the untried may also communicate with their friends by letter; the convicted have no such privilege: the untried are allowed to receive food beyond the prison diet; the convicted are rigorously restricted to the prescribed ration: with the untried, employment is optional; upon the convicted, a daily task of labour is imposed.

The advantages of individual separation are not merely of a preventive character. It not only renders corrupt intercourse impracticable, but it affords to the prisoner direct and peculiar facilities for reflection and self-improvement. In the retirement of the cell, the prisoner is not only cut off from the means of being rendered a worse, but he is placed in a situation in which he may become a better, man. He has the most favourable opportunities of promoting his own moral and religious improvement: he is furnished with the Holy Scriptures, visited by a minister of religion, has the privilege of attending public worship, and is provided with books adapted to his situation. Nor are the benefits of the system limited to the period of his imprisonment. It is one of the most distinctive features of that system, to prohibit each prisoner, during the whole term of his confinement, from seeing another prisoner. Thus, exposure to recognition, on the return of the prisoner into society, is wholly prevented.

If it be alleged that this discipline is unsafe, and unreasonably severe, it is only necessary, in reply, to refer to those prisons in which the separate system has been most extensively and for the longest period enforced. The system has now been in successful operation at the Eastern Penitentiary in Philadelphia for nine years. In the last official Report of this penitentiary, the inspectors state, "that there are some prisoners now in this institution, who have been in confinement for eight years, some six, and some four years, and all of them in good health. Among the healthiest prisoners are those who have been

the longest time in prison ; and not a single instance of mental derangement, it is believed, has been caused by separate and solitary confinement."

This penitentiary, as well as other prisons on the separate system in the United States, has been subjected, in its principles, details, and results, to the minute personal investigation of commissioners sent from France, England, and the Canadas ; and these gentlemen have concurred in declaring themselves decidedly in favour of the system. The views which have been given of the advantages of separate confinement have been adopted by Her Majesty's Government, as will appear from the following extract of a letter, addressed in August 1837, by the Secretary of State (Lord John Russell) for the Home Department, to the magistrates assembled at quarter sessions of the peace, and to the justices of boroughs :—

" I proceed to lay before you the grounds upon which I am disposed to concur with the Home Inspectors, in the opinion that any new prisons to be erected should be constructed with a view to separate confinement.

" The plan which has of late years been most generally adopted, in order to prevent the evils of contamination, proceeds on the principle of separation at night, and strict silence during the hours of labour. This plan is subject to the following objections :—

" 1. It requires numerous punishments in the gaol. You will observe, from the Report of the Coldbath Fields prison, and from that of the Wakefield House of Correction, contained in the Report of the Inspectors of the Northern District, that these punishments are large in number, and exceedingly vexatious in their nature. This practice is of itself a strong objection to the plan : it varies the punishment unequally in different cases ; and the imprisonment contemplated by the sentence is thus aggravated by the infliction of fresh penalties.

" 2. A feeling of continual irritation is kept up, both by the observance of the rule, and by the punishment for its violation. Persons confined in a prison should, if possible, be reduced to a quiet and submissive state, whereby they may at leisure reflect on the evil of the course they have pursued, and some chance be afforded of their reformation ; instead of this, prisoners confined in society, and not debarred from communication, are invited, as it were, to a perpetual battle with authority, and go out of prison provoked rather than subdued by the punishment they have undergone.

" 3. The low diet, which is one of the punishments frequently inflicted, has often an injurious effect on the health, while it does not prevent a repetition of the offence.

" 4. This system cannot be kept up without perpetual vigilance on the part of a very numerous body of keepers. The system is therefore combined, almost of necessity, with the very injurious practice of employing prisoners as wardsmen ; by which means, a person convicted of crime, and degraded by the sentence of imprisonment, is immediately placed in a situation of power and authority, and considered as worthy of trust and indulgence. Besides this anomaly, so contrary to all notions of prison discipline, the practice alluded to gives rise to much intrigue and favouritism, every prisoner being anxious to obtain the

place of wardman, and, when so employed, dispensing favour to those of the convicts with whom he has the most intimate connexion.

"For these reasons, and others, I am disposed to believe that the silent system, if fully carried into effect, would be attended with much evil. But there are, in fact, very few prisons where the vigilance and activity of the governor of the prison have been such as to make the system really effective; and in all such cases, while noise and uproar are repressed, contamination exists to the most pernicious degree.

"I should therefore be anxious to see the system of separation adopted in all new prisons, and, as far as it is practicable, in those already constructed; but great care must be taken, when this system is put into operation, not to confound separate with solitary confinement.

"It is generally understood that solitary imprisonment implies confinement in a gloomy and narrow cell, without occupation, and with a diet of bread and water only. Separate confinement, as recommended by the Inspectors of the Home District, means, on the other hand, confinement in large, airy, light, well-warmed, and ventilated cells, with moral and religious instruction, regular employment, and the daily visits of the chaplain and officers of the prison, as well as of those engaged in the instruction of the prisoners.

"It is obvious that this system of confinement would be subject to a very unfair experiment, if it were tried where there do not exist the means of setting apart cells of proper dimensions and wholesome ventilation; or, if the prisoners so confined should be left, without employment or instruction of any kind, to brood over their melancholy condition.

"Where, however, these precautions can be observed, and are properly attended to, there can be no reason to doubt that, whatever be the result with respect to the more hardened offenders, opportunity will be given for saving, from a course of crime and disgrace, those young and casual offenders, whose previous good character is a proof that their crimes are not the result of confirmed habits. According to the system still too generally prevalent, such offenders, in being sent to gaol, are in fact sent to a school where elaborate instruction is given for the violation of the laws, and where the sense of shame is destroyed by the number and confidence of guilty companions. By the regulations of the separate system, such persons would be strictly separated from all other criminals, would have the means of repenting of their offences, and, when discharged, would not be liable to be claimed and recognised by convicts who had been inmates with them in the same prison.

"Having described the respective systems of prison discipline which now claim the attention of the public, it remains for us but to state, that the present condition of the prisons throughout the kingdom, is such as to call for immediate amendment. There exists in their management a lamentable want of system and uniformity. Whether the prisoners are indiscriminately placed together, or classed agreeably to the provisions of the law, the evils consequent upon association almost universally prevail. Idleness in the case of the untried is a prolific source of demoralisation. Silence, although nominally enjoined upon the convicted, is in but few cases rigidly enforced. In many prisons several prisoners are crowded at night in small apartments;

and moral and religious instruction, when attended to, is generally administered under such unfavourable circumstances, arising from the association of the prisoners, as to be productive of little or no benefit. The consequences of this laxity and neglect are, that the most important objects of criminal justice are frustrated; imprisonment inspires the offender at large with no salutary dread; while its effect on those in confinement is to vitiate rather than deter, and harden rather than reform.

"Until, however, prisons are conducted on the principle of individual separation, no material improvement can take place in their regulation and discipline. The existing plans, whether those of indiscriminate association, classification, or silence, are radically vicious. The errors of those plans are far too important, and too deeply seated, to be removed by modifications or palliations of any description. The great master evil is association, and the remedy is only to be found in the entire separation of prisoner from prisoner.

"By the 5 & 6 Will. IV. c. 38, s. 5, it is enacted, that all rules and regulations for the government of prisons are to be submitted to the Secretary of State for the Home Department, who may, if he thinks fit, alter them, or make additional rules; and no rules can be legally enforced until the Secretary of State shall have subscribed a certificate or declaration that they are proper to be enforced. In case the clerks of the peace neglect to submit the regulations to the Secretary of State, agreeably to the provisions of the statute, he may certify such rules as he may deem proper for the government of such prisons. By this Act, also, power is given to the Secretary of State to appoint inspectors, not exceeding five, to visit and report upon the several prisons. The inspectors are required to submit their reports annually to the Secretary of State, and copies of them are to be laid before Parliament."

The foregoing article was written for the former edition of this work, by Mr. Crawford, one of the Inspectors of Prisons. But though the system of separation which he so strongly recommends still preserves its ascendancy, it may be doubted whether it really deserves all the commendation it has met with. It has been affirmed, in statements said to be founded on experience, that the tendency of the system is to weaken the intellects of those subjected to its operation; to render insanity frequent; and to unfit those who do not become insane for that intercourse with the world which they have to sustain when their imprisonment is at an end. And such we should think, on general grounds, must be the case. Those for whom everything is done, and who rarely see any one but their keepers, or those visitors by whom they are stared at as if they were wild beasts in a menagerie, and who have nothing to do but to perform the same routine tasks, can hardly fail to become little better than machines, and to lose all or most part of their bodily, as well as their mental vigour. And, on the whole, we should be inclined to think, notwithstanding the difficulties in the way of classification, that it is preferable to the separate system.

We incline, also, to think that a great deal too much has been and is expected from prison discipline; and that it has been rendered less severe and irksome than is expedient. A prison should be not merely a place for the safe custody, but also for the correction and chastisement

of such of its inmates as have been convicted of crimes deserving thereof, or who may have misconducted themselves within its walls. And this correction and the whole discipline of the prison should be such as to make a committal to it after conviction truly a punishment, of which those that are most reckless should entertain a salutary horror. This, however, is not the case at present. Prisons have in very many instances more of the character of schools and workhouses than of penal and correctional repositories. They have, in consequence, not so much a floating as a resident population; and we hear every day of offences being committed, merely that those who commit them may be sent back to prison! There can in truth be no doubt that of late years our legislation in penal matters has inclined too much to the side of leniency; and this has been particularly the case in all that respects prisons. No one of course objects to everything being done that is practicable to preserve the health, bodily and mental, of those that may be committed to them. But the best interests of society require at the same time, that the privations and the discipline of prisons should be such as to make them be abhorred by all classes of evil-doers.

Exclusive of the Penitentiary at Millbank, a model prison on the separate system has been constructed on a very large scale at Pentonville, one of the suburbs of the metropolis; and others have been, and are in course of being, opened in different parts of the country.

The number of prisoners in gaol varies of course with the varying circumstances that contribute to the increase or diminution of crime; but it is always very considerable.

The two following tables show the number of prisoners before and after trial at assizes and sessions in England and Wales, during each of the five years ending with 1843, with the periods for which they were imprisoned, &c. :—

I.—Table showing the Terms of Imprisonment of the Prisoners before Trial, at Assizes and Sessions, in England and Wales, with the Proportions per Cent. which the several Classes of Prisoners, distributed according to the Terms of their Imprisonment, bear to the whole Number of Prisoners during each of the Five Years ending with 1843.

But by far the greatest number of prisoners consists of those committed to gaol under summary convictions for offences against the game laws, the revenue laws, the Bastardy Act, the Vagrant Act, the Malicious Trespass Act, &c. This will be seen from the following statements:—

*Table showing the Total Number of Male and Female Prisoners, classed according to their Offences, under Summary Convictions in England and Wales during the Five Years ending with 1843.*

| Years. | Military Prisoners. | Under the Game Laws. |      | Under the Revenue Laws. |      | Under the Bastardy Laws. |      | Under the Vagrant Act. |       | Under the Malicious Trespass Act. |      | Under the Larceny Act. |      |

*Scotch Prisons.*—Down to a comparatively recent period the prisons of Scotland were in an extremely bad state. They have, however, been materially improved since 1826, when their state was inquired into, and the abuses by which they were infected exposed, by a Com-

mittee of the House of Commons. At present they are principally conducted under the provisions of an Act passed in 1839, the 2 and 3 Vict., c. 42. This statute established a General Prison Board, which has its seat in Edinburgh: it consists partly of members holding their seats *ex officio*, and partly of others nominated by the Crown. This Board makes rules, subject to the revision of the Secretary of State for the Home Department, for the government of prisons and prisoners, and makes annual reports of its proceedings. The immediate management and control of all county prisons (excepting that near Perth) is vested in County Boards, chosen in the way pointed out in the Act, and governed in certain particulars by the advice of the General Board. The cost of providing for prisons and prisoners is defrayed by a general rate on property.

A central prison, on a large scale, under the exclusive control of the General Board, is established near Perth; a building formerly used as a dépôt for French prisoners having been fitted up for that purpose. Prisoners are sent to this prison from all parts of Scotland. It is conducted on the separate system, which is either introduced, or to be introduced where practicable, into all the gaols in Scotland. The Scotch prisons are regularly inspected by an officer appointed by Government for the purpose.

The Glasgow bridewell is one of the best-managed prisons in the country, according to the present separate system, of which it affords a very favourable specimen. It is one of the "lions" of the town, and is visited almost every day by strangers. The prisoners occupy well-aired, well-lighted, comfortable cells, in which they are employed in their respective trades, and their health is said to be improved rather than injured by their detention. But the result that every man of sense, not under the influence of the merest prejudice, might have anticipated, has taken place. Confinement in the bridewell has, in great measure, ceased to be regarded in the light of a punishment; and crimes are every now and then committed by individuals who have been dismissed from it, that they may get back to their old quarters! It is absurd to call such a place a bridewell or a penitentiary; it acts as an incentive to crime, and not as a means of correcting criminals; and is, in fact, neither more nor less than a public nuisance. And yet we are to have similar edifices opened in every great town in the empire; and the management of the Glasgow bridewell is to be held up as a model for their imitation! We subjoin—

I. *An Account of the Average Daily Number of Prisoners confined in the Prisons of Scotland during each of the Six Years ending with 1845.*

| Years. | Civil Prisoners. |      |        | Criminal Prisoners. |      |        |
|--------|------------------|------|--------|---------------------|------|--------|
|        | Males.           | Fem. | Total. | Males.              | Fem. | Total. |
| 1840   | 56               | 10   | 108    | 1,354               | 678  | 1,940  |
| 1841   | 50               | 7    | 97     | 1,123               | 743  | 1,954  |
| 1842   | 68               | 6    | 94     | 1,557               | 665  | 2,472  |
| 1843   | 94               | 6    | 90     | 1,469               | 799  | 2,291  |
| 1844   | 83               | 5    | 88     | 1,473               | 766  | 2,236  |
| 1845   | 69               | 5    | 74     | 1,328               | 769  | 2,098  |

II. *An Account showing the Number of Prisoners sentenced to Imprisonment for Six Months and upwards in Scotland, during each of the Six Years ending with 1845, distinguishing between Males and Females, and between the Terms for which they were Sentenced.*

| Years. | Total Sentenced for<br>6 Months and upwards. |      |        | Of whom, Sentenced to            |      |        |                           |      |        |

| 1845   | 496                                          | 267  | 733    | 256                              | 107  | 428    | 210                       | 129  | 390    |

*Irish Prisons.*—The statute 7 Geo. IV., cap. 74, “for the better Regulation of Prisons in Ireland,” was framed on the basis of the English Gaol Act. This statute vested a power in the Irish government of appointing two inspectors-general, whose duty it is to visit the prisons of Ireland, to suggest improvements in their construction and regulation, and to report annually to government on their condition. The grand juries of each county and city are also required to appoint a board of superintendence and a local inspector, whose duty it is to visit the prison twice, at least, in every week. Much benefit has been derived from the adoption of these measures. Before the Act in question, the gaols were in a deplorable condition, but various improvements have since been effected. Tread-wheel labour and employments of various kinds have been introduced into several county prisons; and increased attention is paid to moral and religious instruction. To comply with the provisions of the Act, it was found necessary to build new gaols in several counties, and to enlarge others. Many of the small bridewells and prisons belonging to local jurisdictions have been abolished in pursuance of the statute.

In Ireland there are 42 county and city gaols, and 106 houses of correction and bridewells. The expenses of the former amounted, in 1845, to 75,658*l*.

CHAPTER V.—CHANGES OF FOOD, CLOTHING, AND LODGING.  
CLASSIFICATION AND INCOME OF THE PEOPLE.

To enter fully into the consideration of these interesting subjects would require not a short chapter, but a large volume. The real influence and practical operation of improvements in the arts and sciences are to be measured by their influence over the condition of the great bulk of the people; and, tried by this test, it will be found in Great Britain, as in most other countries, that they have been singularly advantageous. The comforts of *all* classes have been wonderfully augmented within the last two centuries. Probably, however, the labouring orders have been the principal gainers, as well by the large numbers of them who have succeeded in advancing themselves to a superior station, as by the many additional comforts that now fall to the share even of the poorest individuals. From the age of Henry VII. improvement in England has, a few short intervals only excepted, been pretty uniformly progressive; and though various circumstances have of late years conspired to check this advance, they would seem on the whole to have been counterbalanced or overcome. The vigorous and selfish policy of Henry, assisted, no doubt, by the course of events, subverted the foundations of the feudal system, and provided for the exaltation of the Crown and the law upon the ruins of the feudal nobility. The Reformation in the next reign, the rise of foreign commerce in the reign of Elizabeth, and the foundation of the colonies in North America and the West Indies in the reign of James I., gave a stimulus to industry and improvement which even the civil wars could not countervail; but which did not receive its full development till after the Restoration, or rather till after the peace of Paris in 1763. Without going farther back, we may mention, in proof of the disorderly and wretched state of the population in the early part of the sixteenth century, that Harrison tells us (*Description of Britain*, p. 186) that 72,000 “great and petty thieves were put to death during the reign of Henry VIII.” This account of the disorderly state of the kingdom, at the period in question, is corroborated by a statement preserved by Strype, written by an eminent justice of Somersetshire in 1596, wherein it is stated that “Forty persons had been executed (in that county), in a year, for robberies, thefts, and other felonies; 35 burnt in the hand; 37 whipped; 183 discharged: that those who were discharged were most wicked and desperate persons, who never could come to any good, because they would not work, and none would take them into service: that, notwithstanding these great number of indictments, the fifth part of the felonies committed in the county were not brought to trial; and the greater number escaped censure, either from the superior cunning of the felons, the remissness of the magistrates, or the foolish lenity of the people: that the rapines committed by the infinite number of wicked, wandering idle people were intolerable to the poor countrymen, and obliged them to a perpetual watch of their sheep-folds, pastures, woods, and corn-fields: that the other counties of England were in no better condition than Somersetshire; and many of them were even in a worse: that there were, at least, 300 or 400 able-bodied vagabonds in every county, who lived by theft or rapine,

and who sometimes met in troops to the number of 60, and committed spoil on the inhabitants; that, if all the felons of this kind were reduced to good subjection, they would form a strong army: and that the magistrates were awed, by the associations and the threats of confederates, from executing justice on the offenders."—(*Strype's Annals*, vol. iv. p. 290.)

These disorders were partly, no doubt, occasioned by the dissolution of the monasteries, the consolidation of small farms, and, more than either or both of these causes, by the depreciation of the value of money, caused by the discovery of the American mines, and the enfeebling of the standard by Henry VIII. The necessity of providing some remedy for these aggravated disorders, or rather for obviating the poverty and destitution in which they mainly originated, led to the final establishment of the poor laws. But independently of the accidental circumstances now adverted to, the condition of the great bulk of the people in the sixteenth century was the most depressed imaginable. "The bread throughout the land," says Harrison, who wrote in the reign of Elizabeth, "is made of such graine as the soil yieldeth; neverthelesse the gentilitie commonlie provide themselves sufficientlie of wheat for their owne tables, whilest their household and poore neighbours, in some shires, are enforced to content themselves with rie or harleie; yea, and in time of dearth, manie with bread made either of bran, peason, or otes, or of altogether, and some acorns among; of which scourge the poorest doe soonest tast, sith they are least able to provide themselves of better. I will not saie that this extremitie is oft so well to be seene in time of plentie as of dearth; but, if I should, I could easilie bring my triall."—(*Description of England*, p. 168.)

Sir F. M. Eden, whose elaborate researches have thrown much light on this subject, truly states that the substantiality of diet, for which the sixteenth century is renowned, was confined chiefly to the tables of persons of rank. "A maid of honour, perhaps, breakfasted on roast beef; but the ploughman, in these good old times, as they are called, could, I fear, only banquet 'on the strength of water gruel.'"—(*State of the Poor*, vol. i. p. 116.)

But, if their provisions were coarse and deficient, their clothing and lodging were incomparably more so. The houses, even of the rich and great, were, in the sixteenth century, mostly destitute of glass windows; and the cottages of the poor were not only universally without them, but also without chimneys! The luxury of a linen shirt was confined to the higher classes. The cloth used by the bulk of the people was mostly of home manufacture; and, compared with what they now make use of, was at once costly, coarse, and comfortless. All classes, from the peer to the peasant, were universally without many articles the daily enjoyment of which is now deemed essential even by the poorest individuals. Tea and coffee were then wholly, and sugar almost wholly, unknown; and, notwithstanding all that is said of the rude hospitality, and of the consumption of ale and beer, in these remote times, it is probable that the labouring classes consume at this moment more malt liquor than their ancestors in either the fifteenth or the sixteenth century.

The superior condition of the bulk of the people in our own times

over that of their ancestors in the periods alluded to above is, indeed, too obvious to be disputed by any one acquainted with the facts. Perhaps, however, their superior condition at the present moment, as compared with their condition a century ago, or in the reign of George II., may not be so generally admitted. But despite the countervailing influences that have been at work during the interval, the progress of improvement since the middle of last century has, excepting in a few limited localities, been even more rapid than at any former period. It will not be difficult to demonstrate this.

Mr. Charles Smith, the well-informed author of the "Tracts on the Corn Trade," estimated the population of England and Wales, in 1760, at 6,000,000, which, as we have previously seen (vol. i., 399), was pretty near the truth. He then estimated the consumers of each sort of grain, the quantity consumed by each individual, and consequently the whole consumed by man, as follows:—

| Estimated Population of England and Wales. | Average Consumption of each Person.     | Consumed by Man.     |
|--------------------------------------------|-----------------------------------------|----------------------|
| 3,750,000                                  | Consumers of Wheat, at 1 quarter each . | 3,750,000 quarters.  |
| 739,000                                    | .. of Barley, at 1½ .. .                | 1,016,125 ..         |
| 888,000                                    | .. of Rye, at 1½ .. .                   | 999,000 ..           |
| 623,000                                    | .. of Oats, at 2½ .. .                  | 1,791,225 ..         |
|                                            | Consumed by Man . . . .                 | 7,556,350 quarters.* |

Now, it will be observed, that, of the 6,000,000 of people in England and Wales in 1760, Mr. Charles Smith tells us, that no fewer than 888,000 fed on rye. But at present we are quite sure there are not 20,000 who use that species of grain. The rye eaters have universally almost been changed into wheat eaters; and, except in the county of Durham, where a mixture of wheat and rye, called *maslin*, is grown, the culture of rye is almost unknown. Nearly the same may be said of the consumption of barley. In the northern counties of England, at the middle of last century, and for long after, very little wheat was used. In Cumberland, the principal families used only a small quantity about Christmas. The crust of the goose-pie, with which every table of the county is then supplied, was, at the period referred to, almost uniformly made of barley-meal. (Sir F. M. Eden on the Poor, vol. i., p. 564.) But no such thing is now ever heard of, even in the poorest houses. Almost all individuals, except those who depend on potatoes, use wheaten bread, at all times of the year. It is, in fact, the only bread ever tasted by those who live in towns and villages, and mostly, also, by those who live in the country.

It has been the same in most other parts of the kingdom. In Cornwall, from 40 to 50 years ago, the small farmers, with the agricultural labourers, and those employed in the mines, almost invariably used barley; but at present they do not use it to anything like the same extent as formerly, and in many extensive districts it has been entirely

\* *Tracts on the Corn Trade*, 2nd ed. p. 140.

abandoned.\* The same thing has happened in Somersetshire, and in every other county where either barley or oats was formerly made use of. Wheat is now the all but universal bread-corn of England; and in some of the manufacturing towns, within the last few years, the use of the inferior sorts of wheaten bread has been a good deal restricted; and is rejected, indeed, by all but the lowest and poorest classes.

It must, however, be admitted that the introduction of potatoes, and their substitution in various parts of England, during the last five and twenty years, for bread among the labouring classes, is a formidable set-off to the progress they have made in other respects. We have already (vol. i., pp. 441-444) endeavoured to point out the injurious consequences resulting to these classes from their being principally dependent on the potato; and the state of destitution in which they are now (November, 1846) involved in most parts of Ireland, and in the western islands, too painfully confirms the truth of the statements referred to. Luckily the dependence on the potato as a principal article of food has hitherto been confined to a few districts of England and of the mainland of Scotland; but it has in the best of these, as everywhere else, been productive of the very worst results. Somerset, with portions of Hants, Dorset, Wilts, and Devon, makes one of the districts in which the potato forms a principal, or, rather perhaps, *the* principal part of the food of the labourers; and notwithstanding the fertility of the district, and the improvements that are being made in it, wages are there comparatively low, and the bulk of the rural population exceedingly depressed. And such is the case in all parts of the kingdom where the potato is not used merely as a subsidiary article. Wherever it supersedes bread, the population, though there should be no increased demand for labour, invariably increases; wages are gradually lowered; and poverty and its attendant train of evils diffuse themselves over the vicinage.

We are not, therefore, of the number of those who regard the potato rot of this and the previous year as a manifestation of the Divine wrath, and who suppose that its continuance will be ruinous to the poor. On the contrary, we do not hesitate to say that, judging of its influence in time to come by that which it has hitherto exercised, we should look upon the total extinction of the plant as a blessing, and not as an evil. The transition from an inferior and cheap, to a superior and more costly species of food, might no doubt occasion considerable inconvenience in some parts of Great Britain, while in Ireland it would be a matter of much difficulty. But this inconvenience and difficulty, how troublesome soever in the mean time, would be got over in no very lengthened period; and when the change had once been accomplished, the benefit to the country, and especially to the labouring classes, would be greater than can be easily imagined. It would not, we think, be difficult to show, that the gradually extending use of the potato has done more to depress the labourers, or, at all events, to countervail those causes that would have raised them to a higher position, than all the other unfavourable influences to which they have been exposed put together. And supposing such to be the case, it is matter for grave consideration,

\* Evidence of Edward Coode, Esq., *Report of 1833 on the State of Agriculture*, p. 169.

provided (as is indeed most probable) the potato rot should turn out to be accidental and temporary only, whether some restrictions should not be laid on the culture of the root. The tendency to resort to the potato when it is abundant is so very strong that in the long run it is almost sure to prevail; but this resort is necessarily productive of so many evils, and places the very existence of a people in such imminent hazard, that no means should be left untried by which it may be averted.

But, as already stated, the dependence on the potato, though gaining ground, is at present principally confined to a few districts, and has elsewhere had comparatively little influence. The improvement that has taken place in the condition of the people generally, is strikingly evinced by the increase in the consumption of butchers' meat, which is even greater than the increase in the consumption of wheat. Its quality, also, has been greatly improved. From 1740 to about 1750, the population of the metropolis fluctuated very little; amounting, during the whole of that period, to about 670,000 or 675,000. Now, during the 10 years ending with 1750, there were, at an average, about 74,000 head of cattle, and about 570,000 head of sheep sold annually in Smithfield market. In 1841, the population had increased to 1,690,084, or in the ratio of about 150 per cent.: and at an average of the three years ending with 1841, 175,066 head of cattle, and 1,347,447 head of sheep were annually sold in Smithfield; being an increase of 136 per cent. on the cattle, and of exactly the same amount on the sheep, as compared with the numbers sold in 1740-50. It consequently appears that the number of cattle and sheep consumed in London has increased, since 1740, in a proportion but little inferior to the population. The weight of the animals has, however, a good deal more than doubled in the interval. In the earlier part of last century, the nett weight of the cattle sold at Smithfield did not, at an average, exceed 370 lbs., and that of the sheep 28 lbs.; whereas, at present, the average weight of the cattle is estimated at about 800 lbs., and that of the sheep at about 80 lbs. (vol. i., p. 498.) Hence, on the most moderate computation, it may be affirmed that the consumption of butchers' meat in the metropolis, as compared with the population, is more than twice as great at this moment as in 1740 or 1750.

In most other parts of the country, the increase in the consumption of butchers' meat has been even greater. In thinly peopled agricultural districts very little is consumed, but in manufacturing and commercial towns it is quite the reverse; and their vast increase during the last half century more than justifies the inference that there has been, at least, a corresponding increase in the consumption of butchers' meat.

The above statements apply only to the changes that have taken place in the condition of the people of England and Wales; but the change that has taken place in Scotland since the beginning and middle of last century has been still more striking and extraordinary. At the periods referred to, no manufactures, with the exception of that of linen, had been introduced into Scotland. Its agriculture was in the most wretched state imaginable; and the inhabitants were miserably

supplied, even in the best years, with food, and were every now and then exposed to all the horrors of famine.

The details already laid before the reader have shown the extreme prevalence of outrage and disorder in England in the sixteenth century : but Scotland was a prey to the same sort of disorders so late as the end of the seventeenth and the beginning of the eighteenth centuries. In one of the Discourses of the celebrated Scotch patriot, Fletcher of Saltoun, written in 1698, we find the following statement :—

“ There are at this day in Scotland (besides a great many poor families, very meanly provided for by the church boxes, with others who by living on bad food fall into various diseases) *two hundred thousand* people begging from door to door. These are not only no way advantageous, but a very grievous burden to so poor a country. And though the number of them be, perhaps, double to what it was formerly, by reason of this present great distress, yet *in all times* there have been about 100,000 of those vagabonds, who have lived without any regard or subjection either to the laws of the land, or even those of God and nature : fathers incestuously accompanying with their own daughters, the son with the mother, and the brother with the sister. No magistrate could ever discover, or be informed which way one in a hundred of those wretches died, or that ever they were baptised. Many murders have been discovered among them ; and they are not only a most unspeakable oppression to poor tenants (who, if they give not bread, or some kind of provision, to perhaps *forty* such villains in one day, are sure to be insulted by them), but they rob many poor people who live in houses distant from any neighbourhood. In years of plenty many thousands of them meet together in the mountains, where they feast and riot for many days ; and at country weddings, markets, burials, and other the like public occasions, they are to be seen, both men and women, perpetually drunk, cursing, blaspheming, and fighting together.”\*

We suspect there must be a great deal of exaggeration in this striking paragraph ; for, as Scotland did not, at the period referred to, contain more than a million of inhabitants, it is difficult to suppose, notwithstanding the peculiar distress by which she was then visited,† that 200,000 persons, or a *fifth part* of the entire population, could be given up to the mendicancy and disorders described above. But the intelligence and good faith of Fletcher are unquestionable ; and there cannot be the shadow of a doubt that the disorders to which he refers were of long standing, and upon the most gigantic scale, and that he did not believe he had in any degree over-stated them. Indeed, so impressed was he by the idleness and crime then so prevalent, and by the enormities he had witnessed, that, to introduce good order and industry, he did not scruple to recommend the establishment of a system of predial slavery, to which the vagabonds in question and their children

\* *Fletcher's Works*, p. 144, ed. 1737.

† The period from 1693 to 1700, emphatically termed the “ *seven ill years*,” was long remembered in Scotland. A scarcity continued throughout ; and the severity of its pressure was such as to depopulate several extensive parishes in different parts of the country. See Vol. I., p. 421.

should be subjected ! The nature of the proposed remedy shows what the disease must have been.

The establishment of schools, and of a more vigorous and impartial system of government, happily succeeded in repressing these disorders. But the people of Scotland continued, till a comparatively recent period, without manufactures or trade, and were frequently involved in the extreme of misery and destitution. The following paragraph, extracted from the old statistical account of the parish of Meigle in Strathmore, contributed by the late Rev. Dr. Playfair, of St. Andrews, may be considered as applying to the whole surrounding district :—

“Since the year 1745, a fortunate epoch for Scotland in general, improvements have been carried on with great ardour and success. At that time the state of the country was rude beyond conception. The most fertile tracts were waste, or indifferently cultivated. The education, manners, dress, furniture, and tables of the gentry were not so liberal, decent, and sumptuous as those of ordinary farmers are at present. The common people, clothed in the coarsest garb, and starving on the meanest fare, lived in despicable huts with their cattle.

“The half-ploughed fields yielded scanty crops, and manufactures scarcely existed. Almost every improvement in agriculture is of late date : for *no ground was then fallowed ; no peas, grass, turnips, nor potatoes were then raised ; no cattle were fattened ;* and little grain was exported. Oats and barley were alternately sown ; and during seven months of the year the best soil was ravaged by flocks of sheep, a certain number of which was annually sold and carried off, to be fed on richer pastures.

“The inactivity and indolence of farmers were astonishing. When seedtime was finished, the plough and harrow were laid aside till after autumn ; and the sole employment of the farmer and his servants consisted in weeding the corn fields, and in digging and carrying home peat, turf, and heath for winter fuel. The produce of the farm was barely sufficient to enable the tenant to pay a trifling rent and servants’ wages, and to procure for his family a scanty subsistence.”

In the Highlands the situation of the inhabitants was, if possible, worse. The writer of the statistical account of the united parishes of Lochgoilhead and Kilmorish, in Argyleshire, referring to the state of the people about 1760, observes,—

“Indolence was almost the only comfort they enjoyed. There was scarcely any variety of wretchedness with which they were not obliged to struggle, or rather, to which they were not obliged to submit. They often felt what it was to want food. The scanty crops they raised were consumed by their cattle in winter and spring ; for a great part of the year they lived wholly on milk, and even that, by the end of the spring and the beginning of summer, was very scarce. To such an extremity were they frequently reduced, that *they were obliged to bleed their cattle, in order to subsist some time on the blood* (boiled) ; and even the inhabitants of the glens and valleys repaired in crowds to the shore, at the distance of three or four miles, to pick up the scanty provision which the shell-fish afforded them. They were miserably ill-clothed, and the huts in which they lived were dirty and mean beyond

description. How different from their present situation! They now enjoy the necessaries, and many of the comforts of life in abundance; even those who are supported by the charity of the parish feel no real want."

The southern counties presented the same picture of sloth, poverty, and wretchedness. The Rev. Mr. Smith, in his *Agricultural Survey of Wigtown and Kirkcudbright*, published in 1810, gives, on authority of persons then living, the following details with respect to the state of husbandry, and the condition of the people towards the middle of last century:—

"Estates appear to have been broken down into very small farms; or where these were large, they were held in common by two, three, or even four different tenants, who divided the labour and produce in a proportion corresponding to their rent. These, when in tillage, were sometimes *run-rigg*, when each had his proportion allotted; sometimes the whole was ploughed, sowed, and reaped in common, and the produce divided in the field, barn, or barn-yard. Houses or sheds for the whole cattle of the farm never entered into their conception. Their cows were, indeed, not uncomfortably lodged; very often under the same roof with themselves, and sometimes without any intervening wall or partition. Their houses were commonly wretched dirty hovels, built with stones and mud, thatched with fern and turf; without chimneys; filled with smoke; black with soot; having low doors, and small holes for windows, with wooden shutters, or, in place of these, often stopped with turf, straw, or fragments of old clothes.

"The principal object of tillage was to afford straw for the winter support of the few cattle which the pasture (if such it could be called) maintained in summer. As they always overstocked, this was a difficult task; and the poor starved animals, before the return of spring, were reduced to the greatest extremities. Through mere weakness, often they could not rise of themselves. It was a constant practice to gather together neighbours to lift the cows or horses, or to draw them out of the bogs and quagmires into which they were tempted by the first appearances of vegetation.

"Nothing but the frugal penurious manner in which the peasantry then lived could have enabled them to subsist and pay any rent whatever. Their clothing was of the coarsest materials; their furniture and gardening utensils were often made by themselves; their food always the produce of their farms, was little expensive, consisting chiefly of oatmeal, vegetables, and the produce of the dairy; if a little animal food was occasionally added, it was generally the refuse of the flock unfit to be brought to market."

In the view of the *Agriculture of Ayrshire*, published by Colonel Fullarton of Fullarton, in 1793, we have the following details as to its state about 1760:—

"At that period there was hardly a practicable road in the county; the farm houses were mere hovels, moated with clay, having the open hearth, or fireplace, in the middle; the dunghill at the door; the cattle starving, and the people wretched. The few ditches which existed were ill constructed, and the hedges worse preserved. The

land overrun with weeds and rushes, gathered into very high, broad, serpentine ridges, interrupted with large balks, such as still disgrace the agriculture of some English counties. The soil was collected on the top of the ridge, and the furrow drowned with water. No fallows—no green crops—no sown grasses—no carts or waggons—no straw yards—hardly a potato or any other esculent root, and, indeed, no garden vegetables, unless a few Scotch kail, which, with milk and oatmeal, formed the diet of the people; with little straw and no hay, except a scanty portion of the coarsest quality collected from the bogs. The quantity of dung produced was of small avail, and that portion, little as it was, was dragged on cars or sledges, or on what were called tumbler-wheels, which turned with the axle, and supported the wretched vehicle, hardly able to carry five hundred weight. The ground was scourged with a succession of oats after oats, as long as they would pay for seed and labour, and afford a small surplus of oatmeal for the family, and then was left in a state of absolute sterility, or overrun with thistles, till rest again enabled it to produce a scanty crop.”—(Quoted in *Robertson's Rural Recollections*, p. 538.)

The situation even of the Lothians was but little better. We have already seen (vol. i., p. 585) that, so late as 1757, neither turnips, potatoes, clover, nor cultivated herbage of any sort had been introduced into that district. The condition of the occupiers and of the peasantry was also exceedingly depressed. It is stated by Mr. Robertson, that, so late as 1765, mendicity in the Lothians was so very prevalent, that hardly a day passed in which farm houses were not visited by beggars, and hardly a week without some of them getting a night's lodging in the barn.—(*Rural Recollections*, p. 109.)

Such was the abject state of Scotland about the middle of last century! And we are bold to say, that the contrast between the savages by whom Kentucky was formerly occupied and its present inhabitants, is hardly greater than the contrast between the farmers and labourers of Scotland in 1770 and those of the present day. The existing Scotch farmers are distinguished by their superior intelligence and skill in agriculture, the excellence of their stock and implements, and their genteel, comfortable style of living. The labourers, too, are generally well fed and well clothed; their cottages are, for the most part, comfortable and well furnished; and they are all, with the exception of those in some parts of the Highlands who depend principally on potatoes, in the enjoyment of luxuries that formerly were never tasted even by the most extensive proprietors.

The demand for butchers' meat in Scotland has increased in the most extraordinary manner. So late as 1763, the slaughter of bullocks for the supply of the public markets was a thing wholly unknown even in Glasgow, though it had then a population of nearly 30,000! Previously to 1775, or perhaps later, it was customary in Edinburgh, Glasgow, and the principal Scotch towns, for families to purchase in November what would now be reckoned a small, miserable, half-fed cow or ox, the salted carcass of which was the only butchers' meat they tasted throughout the year. In the smaller towns and country districts this practice prevailed till the present century, but it is now

almost everywhere abandoned. The consumption of butchers' meat in Glasgow, as compared with the population, does not at present differ materially from that of the metropolis. We do not, indeed, believe that the command of the people of any country over food and all sorts of conveniences ever increased, in any equal period, half so rapidly as that of the people of Scotland has done since 1770.

Signal, however, as has been the improvement in the condition of the labouring population in most parts of England since the close of the American war, it is hardly so great as might fairly have been expected, considering the vast advances that have been made in the interval in arts and industry. But it is less difficult, perhaps, than may have been supposed to account for this anomalous result. The astonishing increase in the demand for manufacturing labour, consequent to the inventions of Hargreaves and Arkwright, was not confined to adults, but extended to young persons, and even children, of both sexes. Hence a family became in the manufacturing districts an advantage rather than a burden; and population has been increased in them, partly by the powerful stimulus thus given to marriage, and partly by immigration from other parts of Britain and from Ireland, with more than its rapidity in prosperous colonies. And this increase appears, for some years past, to have fully equalled, or, probably, gone beyond the increasing demand for labour, and has, consequently, kept wages from rising. The immigration of labourers from Ireland, which has principally taken place since steam navigation afforded an easy means of conveyance to the poorest classes, has had a powerful influence in bringing about this result, directly by adding to the number of work-people, and indirectly through the contaminating influence of their example. The latter has tended to accustom the English and Scotch labourers to a lower standard of comfort and a lower style of living. In this respect the irruption of this pauper horde has been most injurious; and next to the dependence on the potato, of which, indeed, it may be said to be a consequence, has been most prejudicial to the interests of the labouring population.

No doubt, also, there are various disadvantages, some of which appear to be not a little formidable, and not easily guarded against, incident to the great extension and improvement of manufactures. But to treat of them here would lead us into inquiries not well suited to a work of this description.\*

Owing to the influence of causes which we have elsewhere endeavoured to elucidate, we doubt whether the condition of the labouring part of the population of Ireland, that is, of the great mass of its people, be materially better at this moment than when it was visited by Sir William Petty, under Cromwell. The middle class has, however, been considerably increased within the last half century: and it has shared to some extent in the improvements in which all classes of the people of England and Scotland have so liberally participated during that period.

*Value of the Food annually consumed.*—We have already seen

\* For some remarks on the circumstances now alluded to, see *Principles of Political Economy*, by the author of this work, 3rd ed. pp. 181-188.

(vol. i., p. 573) that the yearly value of the whole agricultural produce of England and Wales, exclusive of seed, may be estimated at about 141,600,000*l.*, and that of Scotland at about 27,740,000*l.*; making a gross sum of 169,340,000*l.*; which, of course, represents the value of the various articles of agricultural produce, of native growth, annually consumed by the people of Britain; and adding to this sum 10,500,000*l.* for the annual value of the imports of food from Ireland and the continent, the entire consumption will be 179,840,000*l.*, or 180,000,000*l.* Now as the population of Great Britain may at present (1846) be estimated at about 20,000,000, (vol. i., p. 449,) we have consequently ( $\frac{180,000,000}{20,000,000}$ ) 9*l.* for the value of the average annual consumption of each individual; and it seems to be the concurrent opinion of those best entitled to decide in respect to such subjects, that this average is not very wide of the mark.

We have estimated (vol. i., p. 573) the value of the entire annual produce of the land of Ireland at 48,200,000*l.*: and deducting from this sum 6,000,000*l.* for the values remitted in the shape of rent, to absentee proprietors, and in payment of manufactures and colonial produce, we have 42,200,000*l.* to be distributed among the resident population; which, as the latter may be taken at 8,386,000, gives about 5*l.* to each.

*Improvements in Clothing.*—The improvements that have been made during the last half century in the clothing and lodging of the people of Great Britain are even more remarkable than those that have been made in their food. The unparalleled abundance and cheapness of cotton goods, caused by the wonderful progress made in the cotton manufacture, have been, in this respect, of vast importance. "It is impossible," says Mr. Baines, "to estimate the advantage, to the bulk of the people, from the wonderful cheapness of cotton goods. The wife of a labouring man may buy, at a retail shop, a neat and good print as low as 4*d.* per yard; so that, allowing seven yards for the dress, the whole material shall only cost 2*s.* 4*d.* Common plain calico may be bought for 2½*d.* per yard. Elegant cotton prints, for ladies' dresses, sell at from 10*d.* to 1*s.* 4*d.* per yard, and printed muslins at from 1*s.* to 4*s.*, the higher priced having beautiful patterns, in brilliant and permanent colours. Thus, the humblest classes have now the means of as great neatness, and even gaiety, of dress, as the middle and upper classes of the last age. A country wake, in the nineteenth century, may display as much finery as a drawing room of the eighteenth; and the peasant's cottage may, at this day, with good management, have as handsome furniture for beds, windows, and tables, as the house of a substantial tradesman sixty years since."—(*History of the Cotton Manufacture*, p. 358.)

The price of most other articles of clothing has also been considerably reduced, though not in the same degree as cottons, at the same time that their fabric has been improved and beautified.

*Improvements in Lodgings.*—Since the middle of last century an extraordinary change for the better has taken place in the habitations of the middle, and, to a certain extent, also in those of the lowest classes. Any one must be struck with this who compares the houses

in the old streets and lanes in any of our towns, with those built within the last fifty years. The latter are, for the most part, in all respects, superior. They are constructed on a larger scale; the apartments are more spacious and lofty; they are better ventilated; and are supplied with water to an extent of which our ancestors had no idea. It is, in fact, to the better construction of houses, to the greater width of streets, and above all, to the abundant supply of water, and the effective system of under-draining that now exists, that the comparative freedom of the newer portions of our great towns from epidemical diseases, and the improvement in the health of the inhabitants, are mainly to be ascribed.

It should, however, be observed, that all, or almost all, that has been done for the improvement of towns, has been the result of the efforts of individuals or of municipal bodies, with little or no co-operation on the part of government. And hence, as stated elsewhere (vol. i., p. 699), the disgraceful condition of a large proportion of the lodgings for the poor in most part of our great towns. And this, it must be borne in mind, is not the case with those houses only that are of rather ancient date, but, also, with very many of those that are of comparatively recent construction; the speculators by whom they have been mostly built being anxious only that they should let, and not expending a farthing they could possibly avoid on anything to promote the health and comfort of the occupiers. The latter, in consequence, become the victims of diseases which extend to the other classes. And hence the expediency of the legislature directing its attention to this subject; and of its taking measures to secure the proper drainage and ventilation of all labourers' houses to be built in future, as well as to improve those already existing.

It may be truly affirmed that, with few exceptions, *all* the farm houses, offices, and cottages of Scotland have been rebuilt since 1780, and mostly, indeed, since 1800. From being the meanest and most wretched of their kind, they are now, speaking generally, well contrived, substantial, and commodious. Whether, indeed, we look to the appearance of that part of the country, or to the condition of the people, the most striking evidences of a rapid and mighty change for the better present themselves on all sides. The progress of improvement has been such as to outstrip the anticipations even of the most sanguine.

*Numbers and Rent of Inhabited Houses.*—We have already given (vol. i., p. 429 and 446) accounts of the number of inhabited houses in each county of England, Scotland, and Ireland, in 1841, and of the average number of persons to a house. It would be desirable to be able to specify the annual rent or value of such houses; but unluckily there are no materials for doing this with any considerable degree of accuracy.

It appears from the returns obtained under the Property Tax Act (*ante*, p. 418), that the rental of houses and *other buildings* assessed in 1842-43 amounted to 35,556,400*l.* in England and Wales, and to 2,919,339*l.* in Scotland. Little information can, however, be derived from this return, inasmuch as it confounds mills, warehouses, shops, &c., with dwelling-houses; and as the value of houses occupied by agriculturists is included in the rental of the lands.

The returns under the house duty afford some more definite information. Down to 1833 a duty was charged on all *inhabited* houses, provided they were of the value of 10*l.* a-year and upwards. Now, it appears from the population returns, that there were, in 1831, 2,850,937 inhabited houses in Great Britain, exclusive of 132,634 that were uninhabited, and of 27,327 that were being built. It farther appears, from the returns as to the house duty, that, in 1832, 442,482 houses were charged with this duty, being of the annual value of 10*l.* a-year and upwards, and producing a gross rental of 12,603,912*l.* (*Papers published by the Board of Trade*, vol. iv., p. 37.) We have no means of accurately estimating the yearly rental of the 2,408,455 houses not subjected to the tax; but we believe we may take it, at a rough average, at about 4*l.* a-house, which would give a total of 9,633,820*l.* According to this statement the rental of the inhabited houses of Great Britain would amount, in 1832, to 22,237,732*l.* a-year; and, as the rental to which houses were assessed to the house tax was very generally below the real rental, this estimate is, probably, a good deal within the mark. At present (1846) the rental of houses in Great Britain is probably not under 28,000,000*l.* a-year.

The value of houses may, perhaps, be taken, one with another, at 10 years' purchase. But, in making an estimate of this sort, or of the rental of houses, it must be borne in mind, that the value and rental of all those that are connected with agriculture are uniformly included in the value and rental of the land, and must, consequently, be deducted in forming any estimate of the total or yearly value of lands and houses taken together.

According to the population returns, there were in Ireland, in 1841, 1,328,839 inhabited houses, and 55,521 uninhabited ditto. The house tax did not extend to Ireland, so that there are no means of estimating the value of these houses. Considering, however, that a very large number of them consist of mere mud cabins, deriving almost all their value from the patches of land on which they are built, their value must be trifling indeed, compared with that of the houses of Great Britain.

Some intrepid calculators have amused themselves by framing estimates of the value of the plate, furniture, clothes, &c., belonging to individuals; but it is needless to say, that there are no data whatever whereon to construct such estimates; which are, in fact, good for nothing, unless it be to throw discredit on all statistical computations.

*Distribution and Income of the Population.*—We have already laid before the reader sundry statements given in the population returns for 1841, with respect to the number of families and individuals engaged in agriculture and in manufactures and commerce in Great Britain and Ireland. But it may, notwithstanding, be desirable to lay the following summary of the returns in question before the reader:—

*Account of the Number of Persons, distinguishing between Males and Females, belonging to the different Divisions of the United Kingdom in 1841; showing, also the Number of Houses in each, with the Number of Persons chiefly occupied in Agriculture, Trade, Manufactures, &c.*

|                                                   | PERSONS.          |                   |                   | HOUSES.          |                |               | OCCUPATIONS.                             |                                                               |                                                               |
|---------------------------------------------------|-------------------|-------------------|-------------------|------------------|----------------|---------------|------------------------------------------|---------------------------------------------------------------|---------------------------------------------------------------|
|                                                   | Males.            | Females.          | Total of Persons. | Inhabited.       | Uninhabited.   | Building.     | Persons chiefly Employed in Agriculture. | Persons chiefly Employed in Trade, Commerce, and Manufacture. | All other Persons not comprised in the two preceding Classes. |
| England . . . .                                   | 7,387,517         | 7,072,637         | 15,000,154        | 2,755,710        | 108,077        | 25,704        | 1,157,816                                | 2,589,078                                                     | 11,213,260                                                    |
| Wales . . . .                                     | 447,707           | 469,898           | 911,603           | 186,229          | 10,137         | 1,764         | 108,622                                  | 80,148                                                        | 717,883                                                       |
| Scotland . . . .                                  | 1,841,968         | 1,970,822         | 3,880,184         | 504,838          | 84,086         | 8,648         | 289,327                                  | 478,561                                                       | 1,517,890                                                     |
| Iales in the British Seas . . . .                 | 57,556            | 66,404            | 124,040           | 19,190           | ..             | 280           | 8,453                                    | 17,869                                                        | 97,180                                                        |

| Total . . . . .                              | 4,981,045                    | 4,301,061              | 5,300,748                    | 4,301,596              | 18,844,484 |

It would be very desirable to have a table representing the numbers and incomes of the different ranks and orders of the people. Unfortunately, however, we are without any materials for its construction. The classification in the population returns, as given above, is but very rude, and little to be depended on; and we are absolutely destitute of any means by which to form any estimate of the average income of any one of the leading classes. It is seen from the details elsewhere given, (*ante*, p. 404,) that the amount of income assessed to the property tax, in 1842-43, including the dividends on the national debt, and the salaries and incomes to public servants, amounted to 171,078,899*l.*: but all incomes of less than 150*l.* a-year are exempted from the operation of the Act; so that we can only guess at their gross amount.

The population of Great Britain may, as already seen, (vol. i., p. 449,) be taken at present (1846) at about 20,000,000. We have, however, no authentic details by which to measure the average annual incomes of any pretty considerable number of individuals in the various ranks and orders of life; and without knowing the numbers in each class, a

knowledge of the average incomes of the individuals belonging to it would not enable us to form a correct estimate of the average income of the people generally. But, in the absence of authentic data, we incline to think we shall not be very wide of the mark if we estimate the average annual income of the people of Great Britain at from 18*l.* to 19*l.* each, or at 92*l.* 10*s.* at a medium for every family of five persons. This, taking the population at 20,000,000, would give a total gross income of 370,000,000*l.* We offer this merely as a rude approximation. But, how diminutive soever it may appear, when contrasted with some late estimates, we are pretty well satisfied that, if it be not materially beyond, it is, at all events, not much within, the mark. The late Lord Liverpool, who was well versed in questions of this sort, stated, in his place in the House of Lords, on the 26th of February, 1822, that he estimated the annual income of the people of Great Britain at from 250,000,000*l.* to 280,000,000*l.* And we believe we shall not be far wrong if we estimate it, at this moment, at from 360,000,000*l.* to 380,000,000*l.*

Considering the poverty and destitution of the great bulk of the Irish people, their incomes must be inconsiderable indeed, compared with those of the people of Britain. We should not, in fact, be inclined to estimate them at above 7*l.* 7*s.* or 7*l.* 10*s.* each, at an average of the population.

---

## CHAPTER VI.—COLONIES AND DEPENDENCIES.

No work descriptive of the British empire could have any pretensions to completeness that omitted to notice its colonies and dependencies. It would, however, be inconsistent alike with the objects and the limits of this work to enter into any detailed investigations, with respect to their statistics. Our object has been to exhibit the physical capabilities, the industry, wealth, and institutions of the British nation; and our colonies and foreign dependencies are connected with our subject only in those respects in which they may be supposed to contribute to, or diminish, our wealth and prosperity.

Our colonies consist of the extensive provinces of the Canadas, Nova Scotia, New Brunswick, &c., in North America; of Jamaica, Barbadoes, and the other islands subject to our sway in the West Indies; of Demerara and Berbice in South America; and of the colonies of the Cape of Good Hope, Mauritius, Ceylon, New South Wales, Van Diemen's Land, &c., in South Africa and Australia. The vast empire of Hindostan, of which we are now the uncontrolled masters, is a dependent or tributary kingdom. Malta and Gibraltar are to be regarded as mere fortified stations or strongholds: and the Ionian Islands form a sort of semi-independent state, of which Great Britain is protector.

*Advantages of Colonial Establishments.*—However extensive and valuable, our colonies confer on us no direct advantage. The attempt made in the early part of the reign of George III. to compel the American colonists to contribute towards the public revenue of the

empire eventually led to that disastrous war which terminated in their independence. Since then we have renounced all attempts to tax the colonies for any purpose, except that of their own internal government and police. They contribute nothing directly to the general revenue of the empire. The fleets and armies required for their protection in war, and their security in peace, are all supplied by the British nation, and cost them nothing. Whatever benefits they confer on us result entirely, or almost entirely, from the commercial intercourse we carry on with them, the opening they afford to emigrants from this country, and the facilities they give to British adventurers for making fortunes, with which they may return to their native land.

The policy pursued with respect to India is different. It is subjected to very heavy taxes, and is not only made, in as far as practicable, to defray the cost of the armaments required for its protection, but a surplus revenue has occasionally, also, been transmitted from India to England. A large number of Englishmen are besides employed, at good salaries, in administering the government of India; and the opportunities it affords to these and other descriptions of adventurers for making fortunes are much greater than those afforded by any of our colonies.

The advantages derived from the possession of such strongholds as Malta and Gibraltar are altogether of a political nature, consisting principally in the shelter they afford to our fleets, and, consequently, in the means they afford for protecting our commerce, and for the annoyance of our enemies during war. Every commercial and maritime nation that takes a just view of its real interests will always take care to possess itself of some such fortified positions.

Were this the proper place for entering upon such inquiries, it might be very easily shown that the advantages supposed peculiarly to belong to the colony trade, are in a great degree imaginary. No considerable colony will ever import any material quantity of goods from the mother-country, unless they be, at the same time, the cheapest and most suitable for her markets; and if they have this quality, the chances are ten to one that the colony would continue to import them were she to become independent. It is not by dint of custom-house regulations, but exclusively through the agency of comparatively cheap goods, that all great markets are acquired in the first instance, and are subsequently preserved. All the *guarda costas* and tyrannical regulations of Old Spain could not hinder her trans-Atlantic possessions from being overrun with the manufactured products of other countries. And were any competitor to come into the field capable of supplying the Canadians with woollens, cottons, or hardware, on lower terms than we can supply them, we should be effectually shut out of their markets. It is not, therefore, to the fact of a country being a colony that we are to ascribe the circumstance of our carrying on a great *free* trade with it; but to the fact of our being able to supply it, or of its being able to supply us, with one or more articles or products in considerable demand on cheaper terms than it or they can be supplied from any other quarter. And a circumstance of this sort would, in most cases, lay the foundations of as extensive a trade with an independent state as with a colony.

Admitting that it were possible—which, however, it rarely is—to compel a colony to purchase articles from the mother-country with which she might supply herself cheaper elsewhere, that would be of no advantage to the parent state, how injurious soever to the colony. Every country has some peculiar departments in which she possesses either a natural or an acquired advantage over others; and in which, consequently, it is most for her interest that her capital and industry should be principally employed. But the articles she compels the colony to take from her are plainly not of this description; and by continuing to produce them, and to force them upon the colony, she retains a portion of her capital and labour in a comparatively disadvantageous business, doing an injury to herself as well as to those she obliges to buy the dear articles.

A country which founds a colony on the liberal principle of allowing it to trade freely with all the world, necessarily possesses considerable advantages in its markets, from identity of language, religion, customs, &c. These are natural and legitimate sources of preference, of which it cannot be deprived; and these, combined with equal or greater cheapness of the products suitable for the colonial markets, will give its merchants the complete command of them. But all attempts at forcing a trade with colonies are sure to be pernicious alike to the mother-country and the colony; and make that intercourse a source of poverty and ill-will, which, if let alone, would be a source of reciprocal advantage.

The state of the trade with Canada may be referred to in proof of what has now been stated. It employs a large number of ships and seamen, and seems, to a superficial observer, highly valuable. In truth and reality, however, it is decidedly the reverse. Two-thirds, or more, of the trade with Canada is forced and factitious; originating in the excess of 40*s.* a load formerly imposed on timber from the north of Europe, over and above what was imposed on that brought from a British settlement in North America; and which excess, notwithstanding the reduction it has undergone, and is to undergo, will amount to about 14*s.* a load from the 5th of April, 1848. This tempts us to resort to Canada, whence we import an inferior article at a higher price. The disadvantages of this impolitic system are numerous and glaring. To a manufacturing country, having a great mercantile and warlike navy, timber is an *indispensable necessary*; and yet, instead of supplying ourselves with it where it may be found best and cheapest, we load the superior and cheaper article with a high comparative duty; and thus do the most we can to make our houses and ships be built, and our machinery constructed, of what is inferior and dear! But the mischief does not stop here. By lessening the imports of the timber of the north of Europe, we proportionally lessen the power of the Russians, Prussians, Swedes, and Norwegians, to buy our manufactured goods; while, by forcing the importation of timber from Canada, we withdraw the attention of its inhabitants from the most profitable employment they can carry on, that is, from the cultivation of the soil, and make them waste their energies in comparatively disadvantageous pursuits! Such, either in a less or a greater degree, is the uniform result of all attempts to interfere with the natural order of things, and

to force a trade—whether with a colony or a foreign country, matters not—that would not otherwise be carried on.

Canada is not, and never has been, of any considerable advantage to England. Should the duties on her timber be reduced to the same level as those on Baltic timber, we question whether she would be found to possess a single article that could be advantageously exported to this country, or that we might not buy cheaper and better elsewhere. While, however, the forcing a trade with colonies is no advantage, but the reverse, the effort to keep them in a state of unwilling dependence, after they are desirous to be independent, entails a very heavy expense on the mother country. Our ascendancy in Canada, at this moment, is wholly dependent on the presence of a large military force, occasioning, one way and another, a direct outlay of little less than 1,500,000*l.* a-year; and all this heavy expense is incurred without any equivalent advantage, and with a full conviction in the mind of every man of sense in the empire that, at no very distant period, Canada will be independent, or an integral portion of the United States.

If we persevere in this policy, it may be doubted whether we have profited much by the dear-bought experience afforded by the American war. We deny that Canada contributes in any way whatever either to the strength or security of Great Britain. On the contrary, the connection with it is an evident source of weakness; for, while it multiplies the chances of our being involved in disputes with other powers, it supplies no means of carrying them on, and distracts and lessens those in our possession. National pride may prevent our relinquishing this costly and worthless dominion; but good sense, and the most obvious views of expediency, would suggest the policy of voluntarily anticipating what must in the end necessarily happen; and of providing for the independence of Canada, under a system of friendly and mutually beneficial relations with this country.

If a colony enjoy a natural monopoly of any product or article in extensive demand, it is supposed that, by laying a heavy duty on its exportation, a considerable advantage may be made to accrue to the mother country; but this does not really appear to be the case. Ceylon possesses a monopoly of the trade in cinnamon; but the high duty (1*s.* per lib\*) laid on the article when exported, restricts the demand for it within very narrow limits; and has reduced its culture and the revenue derived from it to a comparatively trifling extent. Most of our readers have no doubt heard of the immense profits made by the Dutch on spices, of which the possession of the Moluccas gave them the monopoly. But these high profits were wholly a consequence of the limitation of the quantity sold; and to prevent a fall of price by an increase of the supply brought to market, the Dutch occasionally destroyed a portion of the produce. There is no longer, however, so much even as the shadow of a doubt that they were heavy losers by this oppressive and short-sighted policy. The sales were confined to an amount hardly sufficient to employ the capital even of a single merchant; and the total sum realised by the government is not supposed to have amounted to the tenth part of what it would have risen to had the trade been left free, under a moderate duty.

\* Till very recently this duty was 3*s.* per lib! It is still, however, three times as much as it should be.

When a nation derives the whole or any considerable portion of any important article from abroad, it is necessarily exposed, especially if the supply come from only one foreign country, or but a few, to the risk of more or less inconvenience, from any interruption of the friendly intercourse subsisting with it or them. When such important articles are furnished by a colony, their supply is, of course, comparatively secure; and in such cases colonial possessions may be of peculiar value. At this moment any interruption of the trade with the United States might, by interfering with the supply of raw cotton, be productive of the most calamitous results; and there can be no doubt that if the whole, or any considerable part, of the supply of cotton were derived from a colony, it would be an important advantage. This, however, is not the case. It is not, indeed, improbable, but that at some future period India may yield abundant supplies of cotton; but at present the cotton she sends to Europe is neither considerable in amount nor of good quality.

It is said that the West India colonies are advantageous, because they supply us with sugar, which yields a large amount of revenue! But in this respect they are merely on a level with China and Virginia, which supply us with tea and tobacco, which also yield a large amount of revenue. It is the people of Britain, and not the West Indian islands that pay the sugar duties. And as sugar may be imported as the law now stands, after the 5th of July, 1851, from Brazil and Cuba at the same duty, and quite as cheap as it can be imported from the British West Indies, it is difficult to perceive how the emancipation of the latter could occasion any very material public loss.

It must not, however, be supposed, from anything now stated, that we regard the foundation of colonies as inexpedient; on the contrary, colonies have been, in their consequences, highly advantageous to this, as they have been to most old settled countries in all ages. It is not to their establishment, provided they be placed in proper situations, and judiciously managed, but to the needless interference with their government, the trammels imposed on their industry, the prevention of their free intercourse with other people, and the attempt to govern them after they are able and determined to govern themselves, that we object. A nation that founds a colony in an unoccupied country, or in a country occupied only by savages, extends, by so doing, the empire of civilisation to, it may be, an indefinite degree. Such colony not only forms a desirable outlet for the redundant or unemployed population of the mother-country, but it forms a new and rapidly increasing market for its products and those of other countries. No one can doubt that Europe, and especially England, has been signally benefited by the discovery and civilisation of America; but the advantages thence arising, how great soever, would have been incomparably greater but for the various impolitic regulations imposed by the mother states on their colonies. The British colonies, though fettered in various ways, enjoyed a much greater degree of freedom than those of any other country; and, in consequence, their progress, both before and since the era of their independence, has been proportionally rapid. The colonies of Spain, on the other hand, though occupying the finest provinces, had their progress thwarted by the blind jealousy of the mother-country, and were kept as much as possible in a state of pupillage.

The government was entirely administered by natives of Old Spain; the colonists were carefully excluded from every office of power and emolument; one colony was prohibited from trading with another; and had foreigners presumed to settle amongst them, they would have been liable to capital punishment! In consequence, their progress was very slow; and when at length they succeeded in throwing off the galling yoke of the mother-country, they became, and have continued, from their inexperience in self-government, a prey to all sorts of disorders. It is questionable whether her South American colonies were of the least service to Old Spain, and it is, at all events, certain that they have not conferred either on her or on others, a tenth part of the benefit they would have done had they been treated with more liberality, and permitted freely to avail themselves of all the advantages of their situation.

The American war seems to have decided, in as far as experience can decide anything, the question in regard to the policy of retaining colonies in a state of dependency that are determined to govern themselves. No colonies were ever regarded as half so valuable as those which now form the republic of the United States; and it was generally supposed that their emancipation would be decisive of the fate of England, that her sun would then set, and for ever! But have we really lost anything by that event? Has our trade, our wealth, or our power been in any degree impaired by the independence of the United States? The reverse is distinctly the case. The notion that we could have continued for any length of time to retain such rapidly growing countries in a state of dependence, or that we could have been advantageously united in a federal union with vast regions situated in another hemisphere, is too wild and extravagant to require examination. But notwithstanding its independence we have continued, and will continue in time to come, to reap all the advantage we can reasonably claim as the founders of this mighty empire in the wilderness. Englishmen will necessarily always command a preference in the American markets. And while we are disencumbered of the impossible task and enormous expenses attending the government and defence of all but boundless territories 3,000 miles distant, our intercourse with them grows with their growth; and we are as much benefited and enriched by them as we should have been had they continued in the same state of dependence as Malta or the Cape of Good Hope.

The colonisation of Australia will contribute in no ordinary degree to extend the blessings of civilisation; and there can be no doubt that this newly discovered quarter of the globe, the native inhabitants of which were still fewer in number and more barbarous than those of America, is destined, at no very remote period, to be the seat of flourishing communities: and while they preserve the language and literature, it is to be hoped that they may also pursue the mild, liberal, and tolerant policy, of the illustrious people from whom it should ever be their proudest boast to have descended.

Nothing, therefore, can be a greater error than to suppose that we are indebted for any very considerable portion of our national greatness to the extent of our colonial dominion. In all those cases in which we carry on a really beneficial trade with a colony, the chances

are ten to one that we should carry it on to an equal extent were it independent; while the number of our colonies, their distance from the United Kingdom, the ease with which some of them may be attacked during war, and the difficulty and expense of defending them, are very serious considerations. On the whole, perhaps, it will be found, if rightly examined, that extensive colonial possessions are a source of weakness rather than of strength. We derive our superior wealth and civilisation from totally different sources—from the moral and physical advantages, which have made the United Kingdom the head quarters, as it were, of freedom, civilisation, and manufacturing industry; and while we possess these, we need not fear that any serious injury will result from circumscribing the extent of our colonial dominion.

Probably the greatest advantage derived from our extensive colonial dominions is to be found in the field they afford for the profitable employment of our surplus population, and for the exercise of talents for which there is comparatively little demand at home. The United States also present great attractions to emigrants from this country, resulting in part from the common origin of their people, the identity of their language, the general mildness of their climate, and their comparative proximity; and in part from the greater facility with which tracts of unoccupied land may be acquired in them. The policy of the existing regulations in regard to the disposal of unoccupied lands in most of our colonies appears, indeed, to be of the most questionable description. At present, however, we shall content ourselves with observing that whether the plan of fixing a *minimum* price on unoccupied land be or be not expedient, the price fixed in the greater number of our colonies is by far too high, being in truth four or five times as much as it should be. We subjoin

*An Account of the Total Numbers of Emigrants that have left the United Kingdom during each of the 21 Years ending with 1845, specifying also the Destination of the Emigrants.*

| Years.  | North American Colonies. | United States. | Australian Colonies and New Zealand. | All other Places. | Total.    |
|---------|--------------------------|----------------|--------------------------------------|-------------------|-----------|
|         | Emig.                    | Emig.          | Emig.                                | Emig.             | Emig.     |
| 1825    | 8,741                    | 5,351          | 453                                  | 114               | 14,661    |

Average Annual Emigration from the United Kingdom for the last 21 Years . . . 64,260

A very large proportion of the population of the West Indian islands, and of the Mauritius, consists of blacks, who were either them-

selves brought from Africa as slaves, or are the descendants of such. Their importation began in the 16th century ; and was, for a lengthened period, extensively carried on by the English, and by the other European nations who had colonial possessions. At length, however, grave doubts began to be entertained of the justifiableness of the traffic ; and notwithstanding the encouragement received from the legislature, a conviction gradually grew up in the public mind, that the trade in slaves was essentially cruel and unjust. The first motion with relation to it in parliament was made in 1776 ; but the subject was not taken up systematically till 1787, when a committee was formed, of which Mr. Granville Sharp and Mr. Clarkson, whose names are imperishably associated with the abolition of the slave trade, were members. This committee collected evidence of the enormities produced by the trade, which they circulated throughout the country, and thereby succeeded in making a great impression on the public mind. After a number of witnesses on both sides had been examined before the privy council, Mr. Wilberforce, on the 12th of May, 1789, moved a series of resolutions condemnatory of the traffic. They were supported by Mr. Burke, Mr. Pitt, and Mr. Fox. But, notwithstanding the resolutions were carried, nothing was done to give them effect. The friends of the trade having obtained leave to produce evidence at the bar of the House, contrived to interpose so many delays that the session passed off without anything being done. In the following sessions the struggle was continued with various success, but without any definite result. At length the triumph of the abolitionists was finally consummated in 1807 ; a bill for the total and immediate abolition of the slave trade, having been carried in both Houses by immense majorities, received the royal assent on the 25th of March, being the last act of the administration of Mr. Fox and Lord Grenville.

But if the reducing of men into a state of slavery be radically unjust, the retaining of them in that state must be so too ; and consistently with this principle the abolitionists did not content themselves with having effected the abolition of the traffic in slaves, but exerted themselves to improve their condition in the colonies, and to accomplish their emancipation. And after a great deal of discussion, an Act was passed in 1833, by which, on payment being made of 20,000,000*l.* to the proprietors, the progressive emancipation of the slaves was provided for ; and it was finally accomplished in 1838.

This measure has, of course, made a very great change, of which the results cannot as yet be fully appreciated, in the West Indian islands. In the mean time, however, it has occasioned a very considerable decline in the production of sugar, the occupation in which the slaves were mostly employed : and unless means be adopted for securing an adequate supply of free labour to our islands, it seems not a little doubtful whether, after the sugar duties are equalized, the planters in them will be able to sustain the competition of the planters of Brazil and Cuba, who command the services of slaves.

*Relations and Trade with India.*—The first establishments of the English in India, like those of other European nations, arose out of the alleged necessity of providing armed factories or strongholds, where the adventurers might warehouse their goods, and reside in safety for the purpose of carrying on their intercourse with the natives ;

but the factories speedily degenerated into fortifications, and the garrisons into armies. For a while the power of the English and French was pretty nearly balanced in India; but the talents and victories of the famous Lord Clive gave us a decided superiority over every competitor, foreign or native, and extended our sway over some of the largest and finest portions of the Mogul empire. The policy of Clive, whether it were really approved by the succeeding governors-general of our Indian dominions, or were forced upon them by necessity, has, some few short intervals excepted, been steadily followed up; and with such signal success that our Indian empire comprises at present the whole of Hindostan from the Himalaya mountains to Cape Comorin, with a population of above 120 millions!

The most exaggerated accounts have been at all times current in Europe of the extraordinary wealth of India, and of the importance of the commerce with that part of the world. After the victories of Lord Clive the most sanguine expectations began to be entertained, not only of a vast increase of trade with India, but that we should draw from her an immense amount of surplus revenue, or tribute. Perhaps it is not going too far to say that these expectations have been entirely disappointed. Great abuses existed in the government of the Bengal provinces when conquered by Clive; the servants of the East India Company making large fortunes by the oppression of the natives and the ruin of the country. But, notwithstanding the eradication of the abuses in question, the immense additions that have since been made to our empire, and the oppressive taxes laid on the natives, it is not very clear that England has hitherto derived any direct revenue from India. The distance of the country, and the totally dissimilar language and customs of the people, are very great obstacles to our governing it with the economy necessary to make it yield any considerable amount of surplus revenue. The East India Company always contended that the profits made by their monopoly of the China trade were necessary to enable them to conduct the government of India. But, though there are strong grounds on which to impeach the accuracy of this statement, still it is abundantly clear that the surplus revenue we have derived from India, supposing there has been any such, has been comparatively inconsiderable; and quite trifling, indeed, compared with our own anticipations, and with the notions entertained by others of its magnitude.

Down to the abolition of the Company's monopoly in 1814, our trade with India was, also, very limited; so much so, that the total amount of the exports from this country to it, including the important item of military stores, did not amount to 1,400,000*l.* a-year! And a considerable loss is said to have been incurred even on this. In their efforts to force the sale of woollens, by which they were heavy losers, the Company seem to have entirely forgotten that we had attained to great excellency in the manufacture of cotton-stuffs, the articles principally made use of as clothing in Hindostan; and that, notwithstanding the cheapness of labour in India, the advantage we derived from our superior machinery might enable us to offer cotton stuffs to the natives at a lower price than they could afford to manufacture them for. No sooner, however, had the trade been opened to private adventurers, than this channel of enterprise was explored; and the result has been, that, instead of bringing cottons from India to England, the former has

become one of the best and most extensive markets for the cottons of the latter. We question, indeed, whether, in the whole history of commerce, another equally striking example can be produced of the powerful influence of competition in opening new and almost boundless fields for the successful prosecution of commercial enterprise.

In 1814, the first year of the free trade to India, the exports of cotton amounted to 817,000 yards, of which only about 170,000 yards, valued at 17,778*l.*, were exported by the Company! The progress of the trade has since been such that we now annually export about 250,000,000 yards of cotton stuffs to India, and about 23,000,000 *lbs.* of twist and yarn, their conjoint value being little short of 5,000,000*l.*

The demand for several other articles of British manufacture has also considerably increased, though not in the same unprecedented manner as cotton. Notwithstanding all that has been said of the immutability of Hindoo habits, the fact is not to be denied, that a taste for European products and customs is rapidly spreading itself over India. And the fair presumption is, that it will continue to gain ground according as education is more diffused, and as the natives become better acquainted with our language, arts, and habits. The aggregate value of our exports to India is now rather above 6,000,000*l.* a-year!

It would, however, be unjust not to state that though extremely ill fitted to serve as a commercial engine, the East India Company has governed India with singular discretion; and has made the most praiseworthy efforts to enforce economy in all departments of the administration, and to appoint the best men to all situations of power and emolument in that country. The patronage of India has always been less jobbed and abused than that of England; and, notwithstanding the small amount of surplus revenue, there are few governments that have made more vigorous exertions to repress abuse, and to protect the rights of their subjects.

We subjoin some tables giving pretty ample details as to the population, trade, revenue, &c., of our colonies and dependencies.

The area and population of the principal divisions of British India have been estimated as follows:—

| Divisions.                                                            | Area in sq. m. | Population. |
|-----------------------------------------------------------------------|----------------|-------------|
| <i>In Hindostan</i> —                                                 |                |             |
| Presidencies of Bengal and Agra . . . . .                             | 200,000        | 60,710,000  |
| Presidency of Madras . . . . .                                        | 230,100        | 14,860,000  |
| Presidency of Bombay . . . . .                                        | 80,100         | 8,940,000   |
| Island of Ceylon . . . . .                                            | 34,450         | 1,840,000   |
| <i>In India beyond the Ganges</i> —                                   |                |             |
| Provinces conquered from the Burmese (under the Bengal presidency) .— |                |             |
| Assam . . . . .                                                       | 16,800         | 600,000     |
| Jynteah } . . . . .                                                   | 10,350         | 270,000     |
| Cachar } . . . . .                                                    | 16,250         | 70,000      |
| Aracan . . . . .                                                      |                | 230,000     |
| Tenasserim coast { Marishan, . . . . .                                | 30,500         | 85,000      |
| { Turry and Ye . . . . .                                              |                |             |
| { Mergui and Archipelago . . . . .                                    |                |             |
| Strait settlements:—                                                  |                |             |
| Penang, or Prince of Wales's Island, and prov. Wellesley . . . . .    | 1,570          | 154,500     |
| Malacca . . . . .                                                     |                |             |
| Singapore . . . . .                                                   |                |             |
| Total . . . . .                                                       | 608,470        | 98,929,000  |

To the foregoing territories, under the immediate rule of the British, may be added the tributary States of Berar, Oude, Mysore, Tra-

| Colonies.                      | Date of Capture, Conquest, or Settlement. | Whether having Legislative Assemblies, or governed by Orders in Council. | Population, 1842, last Census. | Imports and Exports of United Kingdom, (Official Value.) | British and Irish Produce and Manufactures exported from United Kingdom, (Declared Value.) | Entered Ports of United Kingdom. | Number and Tonnage of Vessels to and from the United Kingdom. | Cleared from Ports of United Kingdom. |

**vancore, Cochin, Sattarah, the dominions of the Nizam, of the Rajpoot and Bundelcund chiefs, &c., which are substantially administered by British rulers, and are either entirely or in part surrounded by British territories. They are estimated to comprise in all about 433,000 square miles, and a population of about 41,000,000.**

The army maintained in British India consisted, in 1837, of the following effective force, in British, native, and contingent native troops:—

| British.                  |        | Native.                                       |         | Contingent Native.                 |         |

The expense of the Anglo-Indian army, according to reports laid before parliament in 1830, was as follows :—

|                          | £.        |                        | £.        |
|--------------------------|-----------|------------------------|-----------|
| Engineer Corps . . . . . | 83,874    | Pioneers . . . . .     | 74,511    |
| Artillery . . . . .      | 606,463   | Commissariat . . . . . | 614,327   |
| Cavalry . . . . .        | 1,070,834 | Sundries . . . . .     | 2,178,887 |
| Infantry . . . . .       | 4,124,079 |                        |           |
| Staff . . . . .          | 481,490   | Total . . . . .        | 9,378,955 |
| Medical Staff . . . . .  | 132,490   |                        |           |

It may be observed, by the way, that this sum of 9,374,000*l.* is more than double the sum annually expended on the Prussian army! Considerable additions have been made within the last half dozen years to the military force in India.

*Revenue and Expenditure of the East India Company.*—The far greater part of the revenue of India is at present, and has always been, derived from the soil. The land has been held by its immediate cultivators generally in small portions, with a perpetual and transferable title; but they have been under the obligation of making an annual payment to government of a certain portion of the produce of their farms, which might be increased or diminished at the pleasure of the sovereign; and which has, in almost all cases, been so large, as seldom to leave the cultivators more than a bare subsistence. Under the Mohammedan government, the *gross* produce of the soil was divided into equal, or nearly equal shares, between the ryots, or cultivators, and the government. We regret we are not able to say that the British government has made any material deductions from this enormous assessment. Its oppressiveness, more than anything else, has prevented our ascendancy in India, and the comparative tranquillity and good order we have introduced, from having the beneficial effects

that might have been anticipated. The cultivators throughout Hindostan are proverbially poor; and till the amount of the assessment they are at present subject to be effectually reduced, they cannot be otherwise than wretched. They are commonly obliged to borrow money, to buy their seed and carry on their operations, at a high interest, on a species of mortgage over the ensuing crop. Their only object is to get subsistence—to be able to exist in the same obscure poverty as their forefathers. If they succeed in this, they are satisfied. Mr. Colebrooke, whose authority on all that relates to India is so deservedly high, mentions that the quantity of land occupied by each ryot, or cultivator, in Bengal, is commonly about six acres, and rarely amounts to 24; and it is obvious that the abstraction of half the produce raised on such patches can leave their occupiers nothing more than the barest subsistence for themselves and their families. Indeed, Mr. Colebrooke tells us that the condition of ryots subject to this tax is generally inferior to that of a hired labourer, who receives the miserable pittance of two annas, or about threepence, a day of wages.

*Abstract View of the Revenues (inclusive of Commercial Assets realised in England) and Charges of British India, for the Years 1840-41, 1841-42, 1842-43, and 1843-44, including the Charges disbursed in Great Britain.—(Parl. Paper, No. 362, Sess. 1845.)*

Besides the land revenue, a considerable revenue is derived in India from the monopolies of salt and opium, the sale of spirituous liquors, land and sea customs, post-office, &c. Of these monopolies, the first is, in all respects, decidedly the most objectionable. Few things, indeed, would do more to promote the improvement of India than the total abolition of this monopoly. An open trade in salt, with moderate

duties, would, there can be no doubt, be productive of the greatest advantage to the public, and of a large increase of revenue to government. The opium monopoly, though less objectionable than the last, is, notwithstanding, very oppressive. It interferes with the industry of the inhabitants; those who are engaged in the cultivation of opium being obliged to sell their produce at prices arbitrarily fixed by the Company's agents. It would be worse than useless to waste the reader's time, by pointing out in detail the mischievous effects of such a system; they are too obvious not to arrest the attention of every one.

We subjoin the following statement with respect to the revenue of the presidency of Bengal, the most important of all the presidencies:—

*Account of the Revenue of the Bengal Presidency, in 1840-41, 1841-42, 1842-43, 1843-44.*

| Revenues.                                                                                                                 | 1840-41            | 1841-42            | 1842-43            | Estimate, 1843-44  |
|---------------------------------------------------------------------------------------------------------------------------|--------------------|--------------------|--------------------|--------------------|
| Mint duties . . . . .                                                                                                     | Co.'s rs. 5,07,320 | Co.'s rs. 4,75,391 | Co.'s rs. 4,10,723 | Co.'s rs. 2,13,464 |

It is seen from these statements that the territorial revenues at the disposal of the East India Company equal those of the most powerful monarchies. At present they are greater than those of either Russia or Austria, being inferior only to those of Great Britain and France. Still, however, the Company's financial situation is not very prosperous. Vast as their revenue has been, their expenditure appears, in most instances, to have been still larger; and their debts in India,

exclusive of their bond debts at home, amount at present (1846) to probably not less than 40,000,000*l*.

The following account shows the balance between the revenue and expenditure of our Indian dominions, from 1814-15 to 1839-40:—

*Account exhibiting the Total Revenues and Charges of the British Possessions in India, in each Year from 1814-15 to 1839-40, both included, exclusive of the Expense of the Expedition into Afghanistan.*—(Compiled from the Parl. Paper No. 574, Sess. 1842.)

| Years   | Total Gross Revenue of India. | Cost of Collection and Payments thereon | Total Net Revenue of India. | Total Charges in India, St. Helena, &c. | Payments in England on account of India. | Total Charges exclusive of Collection, &c. | Net Surplus of Revenue over Expenditure. | Net Surplus of Expenditure over Revenue. |
|---------|-------------------------------|-----------------------------------------|-----------------------------|-----------------------------------------|------------------------------------------|--------------------------------------------|------------------------------------------|------------------------------------------|
| 1814-15 | £ 14,786,219                  | £ 2,722,000                             | £ 12,064,219                | £ 10,773,502                            | £ 1,290,718                              | £ 12,177,000                               | £ -                                      | £ 843,853                                |

N.B.—The charges defrayed in England on account of India, include dividends on Company's stock, about £20,000*l* *per* *ann*; interest on home bond debt; invoice value of stores consigned to India; half-pay, and other retired allowances, &c.

However much this account of the financial concerns of our Eastern empire may be at variance with the exaggerated ideas entertained respecting it, as well by a large proportion of the people of England as by foreigners, it will excite no surprise in the mind of any one who has ever reflected on the subject. It is due, indeed, to the directors, to state, that though they have occasionally acted on erroneous principles, they have always exerted themselves to enforce economy in every branch of their expenditure, and to impose and collect their revenues in the best and cheapest manner. But though they have succeeded in repressing many abuses, it would be idle to suppose that they should ever entirely succeed in rooting them out. How can it be imagined, that strangers sent to India, conscious that they are armed with all the strength of government, placed under no real responsibility, exempted from the salutary influence of public opinion, fearing no effectual exposure through the medium of the press, and anxious only to accumulate a fortune, should not occasionally abuse their authority? or that they should manage the complicated and difficult affairs of a vast empire, inhabited by a race of people of whose language, manners, and habits they are almost wholly ignorant, with that prudence, economy, and vigilance, without which it were idle to expect that any great surplus revenue should ever be realised?

*An Account of the Public Debts, bearing Interest, outstanding at the several Presidencies in the East Indies on the 30th April, 1843; specifying the Rates and Annual Interest thereon.*  
—(Parl. Paper, No. 362, Sess. 1845.)

## CHAPTER VII.—VITAL STATISTICS.

To exhibit the sanatory state of the British population as accurately as existing materials permit, we shall severally examine the mortality, the sickness, the epidemics, the endemics, the prevailing forms of sporadic disease, and the various ways in which, at all ages, its successive generations perish.

Human existence may terminate at any instant between 0 and 100 years: it may be a constant process of disease, or remain uninterrupted by a day's sickness. On opening a watch, or any piece of mechanism, and observing the state of its springs, chains, or wheels, it is not difficult to foresee how long its movements will continue; but no one, contemplating a solitary individual of the human species, and ignorant of the secret sources of his life, as well as of the many conjunctures of external circumstances in which he may be placed, can foretell the period when some mortal derangement will occur in his organisation; what diseases he will encounter; how long he will suffer, or the hour when his sufferings and his existence will end. The same uncertainty is extended, in the popular thought, to families, nations, and mankind, considered in collective masses; but observation proves that generations succeed each other, develop their energies, are afflicted with sickness, and waste in the procession of their life, according to fixed laws—that the mortality and sickness of a people are constant in the same circumstances, or only revolve through a prescribed cycle, varying as the causes favourable or unfavourable to health preponderate.

## MORTALITY.

The physiological changes in the human body intimate that it was framed to continue in healthy action for 70 or 80 years: yet owing to hereditary weakness, or a vicious tendency, and the imperfect adaptation of parts of the external world to its organisation, a certain number of every generation fall sick, and of these a certain number die at all ages: in such a ratio, however, that from birth to the age of puberty the sickness and mortality decline; while from puberty they increase slowly, in a geometrical progression, up to the 50th or 60th year, and then more rapidly to the end. In comparing, therefore, the sanatory state of different nations, it is not enough to know the absolute mortality or sickness to which they are subject; as experience has proved that these may be nearly the same, yet from their bearing differently on the periods of childhood, manhood, or old age, have a very different effect on the national strength and resources.

From observations to which we shall again have occasion to recur, it appears that in manhood, when 1 person in 100 dies annually, 2 at the least are constantly sick: and although this exact relation is, perhaps, not preserved in infancy and old age, or where the rate of mortality deviates much from the standard, it may be safely assumed as an approximation to the truth. Admitting, then, that the annual mortality is 2·19 per cent., after the corrected returns, and that the population of England and Wales is at present (1846) 17,000,000, the total number constantly disabled by sickness will amount to 744,600 persons; and if the same proportions be extended to Scotland and Ireland, to 1,247,000. This reduces the efficient population of the empire 1-23rd part; and the productive power, so far as it depends on human labour, 1-15th part, if the maintenance and attendance of the sick cost half the produce of their labour in health:\* an example will show how it would be erroneous to suppose that two populations, in which the same absolute proportion of sick existed, suffered consequently to an equal extent. Two-fifths of the registered deaths occur below 5 years of age, yet the mortality in England has latterly (1841) not been more than 63·5 per 1,000 at this early age: in Sweden it was (1755-75) 90·1 per 1,000; and it is probable that at the same period the mortality of infants in England was not a great deal lower than in Sweden: so that, if sickness have diminished at the same rate, the proportion of infants constantly ill is not by one-third so great as it was a century ago. But children being entirely helpless, and in no way contributing to the nation's actual strength, a diminution of sickness among them, however desirable, adds little immediately to national power and happiness, compared with an improvement in the health of adults, between the ages of 15 and 60 years, such as has been observed in London since the 16th century, when the destructive epidemics ceased.

The magnitude of the subject, and the fact that a million and quarter of the inhabitants of the United Kingdom are disabled by disease and

\* In the English provincial hospitals the maintenance and the drugs administered to each patient cost 1s. 5d. daily; in Paris. 1s. 5½d.; in London considerably more.—(*British Medical Almanac*, p. 118.)

suffering, is of less importance than the consideration that their condition may be vastly ameliorated. In one class of districts the mortality of boys below 5 years of age, is 145 in 1,000, in another 48 in 1,000: between the ages of 15 and 55 it varies from 18 to 11, implying a difference of 14 men constantly sick in 1000 living. In the former districts about 36, in the latter, 22 are constantly suffering from disease, and absolutely disabled from labour. If the population of the United Kingdom, and the adjacent islands (28,487,000), were as unhealthy as that of Liverpool and Manchester, 1,937,000 would be ill, and 968,500 would die annually; whereas if the whole people enjoyed as good health as the inhabitants of other parts of England, only 1,026,000 would be constantly ill, and only 513,000 would die annually on an average. In the former case, the mean duration of life would be 25 years, in the latter 45 years. Whether it be possible or not to raise the standard of health to the height enjoyed in the healthiest counties, or to one still higher, the importance of the subject recommends it to a careful experimental investigation; because, when the character and causes of our diseases are known, some provision may be made for their alleviation; the extent of the injuries which they inflict upon the public will be determined; and the standard of salubrity, indicating an increase or diminution of physical strength, will afford the best index of the prosperity of the nation, and of the extent to which it is affected by atmospherical, political, or economical influences.

The method pursued in obtaining the following results is unexceptionable, and demonstrates that for the last century the mortality of children in London has constantly been on the decline.

1. *Table showing the Births and the Deaths under 5 Years of Age, according to the "London Bills of Mortality," for 100 years, in 5 Periods of 20 Years each; also showing the Number dying under 5 Years out of 100 born.\**

|                               | 1730-49 | 1750-69 | 1770-89 | 1790-1809 | 1810-29 |
|-------------------------------|---------|---------|---------|-----------|---------|
| Total Births . . . . .        | 315,456 | 307,395 | 349,477 | 386,393   | 477,910 |
| Total Deaths under 5 Years .  | 235,087 | 193,694 | 180,058 | 159,571   | 131,794 |
| Dying per Cent. under 5 Years | 74.5    | 63.0    | 51.5    | 41.3      | 31.6    |

The general question of population has already been examined, and requires no further notice; but the deaths at different ages are so closely connected with health and with the great apparent changes in the diseases of this country, that we shall here present a comparative view of the rate of mortality that prevailed in England, Carlisle, Belgium, and Sweden, from an article in the *British Medical Almanac* for 1836. (See next page.)

Here it appears that the mortality of the whole English population, between the ages of 20 and 40, was higher than in Belgium and Sweden, while the mortality in early life was much lower; and if the Carlisle observations ever approximately represented the mortality of England, the waste of life in the 5 years of infancy has almost dimi-

\* On the Diminution in the Mortality of Infants in England, by T. R. Edmonds, Esq.—*Lancet*, vol. i. 1835-36.

nished one-half during the last 100 years. Other observations support this probability.

II. Table showing, in each of Thirteen Intervals of Age, the Number of Deaths which occur annually for every 1000 Persons, living at the same Age, in England, Sweden, and Belgium.

| Between Ages.       | England and Wales.         |                      |                                |                    |          | Carlisle.                              | Belgium.                | Sweden                                  |                                         |

In the 20 years, 1730-49, out of 100 born, 74.5 died under the age of 5 years. During the 20 years, 1810-29, only 31.8 died out of the same number. This table is from a paper of Mr. Edmonds, to whose investigations of the English population returns we shall have frequently to refer.

If half the children formerly cut off at an early age in England be now reared, and form part of the adult population; while the annual deaths between 20 and 30, instead of being 7.6, or 9.1, or 8.9 per 1,000, as in Carlisle, Belgium, and Sweden, are 10.1; it will appear that a vast number of weakly children are every year introduced into the English population, and that, unless proper means be taken to fortify the constitution in manhood, the relative vigour will not increase in the same ratio as the population.

Contrary to the Swedish observations, the mortality of females between the ages of 10 and 40, is higher than that of males: it is only in childhood, and after the 50th year, that the mortality of females is lower than that of males.

The extent to which, at five intervals of age, the mortality, and consequently the intensity of disease, differ in the English counties, is exhibited in the subsequent table (III.), calculated by Mr. Edmonds, on the ascertained ages of the living in 1821, and the deaths during the 18 years, 1813-30. The counties are arranged chiefly according to the rate of mortality among females between the ages of 15 and 60 years. Mr. Edmonds conceived that the mortality of males at the same interval of age would not serve as a good index of the healthfulness of a locality, unless we could abstract the detrimental effect of their occupations, leading to fatal accidents or to loss of health. In many counties also, the amount of the military and maritime population

(which was not enumerated) diminishes considerably the value of the apparent mortality of the male sex.\* (See Table III.)

III. Table showing for each County of England the Annual Deaths which occur for every Hundred Living in each of Five Gradations of Age, the Counties being classified according to the Mortality of Females between the Ages of Fifteen and Sixty Years.

The numbers representing the mortality in thirty-nine counties have been obtained by increasing the registered deaths one-ninth part. In the case of Wales, Monmouth, Middlesex, and Surrey, the increase has been one-fourth part. The relative weight of each observation is indicated by the additional column representing in thousands the amount of the female population of each county.

We leave the reader to investigate the causes which increase or diminish mortality in the several counties, and to compare their geological, botanical, meteorological, and economical states, with this table. It will be observed, that the healthiness of each class of counties decreases from Cornwall and Devon, the healthiest in England, to Cambridge, Kent, Surrey, and Middlesex, where the mortality is greatest. A slight diminution of the mortality, varying from .05 to .09 is required, between the ages of 15 to 60, in some of the counties where the maritime and military population was not enumerated, although its deaths are recorded in the parish registers. This correction has been made in Table IV.

\* Lancet, vol. i. 1835-36. No 12.

IV. Table showing, in each of Six Gradations of Age, the Mortality per Cent. of each Sex in each of Eight Classes of English Counties.

| Class.                                                                                  | MALES (corrected).* |      |       |       |       |          | FEMALES.  |      |      |       |       |       |          |           |

Except Cambridge, it will be found that, generally, the counties having the greatest proportion of inhabitants congregated in towns are the most unhealthy. Above 60, the mortality in these counties would have been higher, had the ages of the inhabitants of Birmingham, Bristol, Newcastle-upon-Tyne, Manchester, Leeds, and some other large towns, not been omitted, in some unaccountable manner, in the specification made in 1821. Through this omission, and the uncertainty in the parish registry, it is impossible to ascertain the present mortality prevailing in many of our large towns. The population returns do not furnish materials for determining the mortality, except in the six towns subjoined: the absolute mortality in which is stated, on the assumption that the registered deaths are to be increased 20 per cent. in order to obtain the true number of deaths; while, in the whole of England and Wales, the estimated increase was 13.92 per cent. Fortunately the valuable observations collected in Glasgow by the "Committee on Churchyards," comprising an accurate return of the deaths during 15 years (1821-35), and two enumerations of the living, and their ages, come here to our assistance: they have furnished Mr. Edmonds the materials for determining very accurately the mortality in Glasgow during the three last quinquennial periods. The public spirit of the Glasgow town council, and the exertions of Dr. Cleland, in obtaining a second voluntary enumeration of the living, and their ages, in 1831, are as honourable to them, as the omission of the ages in 1831 is discreditable to the persons who directed that census in England and Scotland.

V. Table of the Annual Mortality per Cent. at every Age in Glasgow during the Fifteen Years, 1821-35, compared with the Mortality prevailing during Eighteen Years, 1813-30, in Six large English Towns, viz., York, Norwich, Plymouth, Hull, Portsmouth, Liverpool, and London.

| Between Ages | 1813-30. Six Towns of England. | 1821-35. Glasgow. | 1813-30. London. | Between Ages | 1813-30. Six Towns of England. | 1821-35. Glasgow. | 1813-30. London. |

\* The apparent mortality of the male sex between 15 and 30, between 30 and 60

By comparing the mortality prevailing in these towns with that of England, it will be seen how much the chances of dying are increased among the mass of people dwelling in cities.

To show what variation has taken place in Glasgow during the last 15 years, the following table was constructed :—

VI. Table showing, for each of Three Quinquennial Periods, the Average Annual Deaths which occurred in each Interval of Age, out of 100 Living at the same Interval; also showing the Annual Mortality for the Four last Years, exclusive of the Year of Cholera.\*

| Between Ages | MALES.  |         |         | FEMALES. |         |         | Third Period, exclusive of Year of Cholera. |          |
|--------------|---------|---------|---------|----------|---------|---------|---------------------------------------------|----------|
|              | 1821-25 | 1826-30 | 1831-35 | 1821-25  | 1826-30 | 1831-35 | Males.                                      | Females. |
| 0—5          | 8.08    | 7.47    | 9.78    | 7.66     | 7.10    | 8.58    | 9.31                                        | 8.29     |
| 5—10         | 1.31    | 1.14    | 1.31    | 1.16     | 1.11    | 1.31    | 1.38                                        | 1.24     |
| 10—20        | .74     | .62     | .85     | .71      | .61     | .72     | .68                                         | .67      |
| 20—30        | 1.22    | 1.29    | 1.51    | .88      | .84     | 1.12    | 1.46                                        | .92      |
| 30—40        | 1.35    | 1.56    | 2.14    | 1.24     | 1.32    | 1.55    | 1.77                                        | 1.48     |
| 40—50        | 1.52    | 2.31    | 3.19    | 1.65     | 2.06    | 2.67    | 2.60                                        | 2.21     |
| 50—60        | 2.04    | 3.71    | 4.11    | 2.68     | 3.36    | 4.50    | 3.29                                        | 3.51     |
| 60—70        | 5.72    | 6.38    | 6.97    | 4.67     | 5.74    | 6.72    | 6.80                                        | 5.50     |
| 70—80        | 12.70   | 15.45   | 17.90   | 10.46    | 11.90   | 15.06   | 15.54                                       | 11.02    |
| 80—90        | 21.27   | 29.07   | 30.33   | 16.72    | 21.67   | 22.50   | 22.54                                       | 22.72    |
| Above 90     | 36.29   | 54.00   | 37.36   | 31.04    | 31.32   | 44.48   | 26.69                                       | 42.76    |
| All Ages     | 2.78    | 2.31    | 3.59    | 2.37     | 2.40    | 2.93    | 3.31                                        | 2.62     |
| 30—60        | 1.04    | 2.27    | 2.85    | 1.69     | 1.98    | 2.66    | 2.05                                        | 2.12     |
| Above 60     | 9.81    | 10.23   | 10.95   | 7.28     | 8.70    | 9.77    | 9.00                                        | 8.37     |

This table deserves serious attention; it places beyond all doubt the remarkable fact that, “between the ages 30 and 60, the mortality of each sex increased 20 per cent. every 5 years. This is the case after deducting 10 per cent. from the actual average of the 5 years, 1831-35, for the effect of the cholera visitation in 1832. The mortality in 1832, between the ages of 30 and 60, really raised the average 20 per cent.” By comparing the two last columns of the table with the third and sixth, it becomes evident that cholera increased the mortality principally between the ages of 20 and 70.

Through the ignorance, not yet wholly dispelled, of the conditions of animal existence prevailing when large towns were built, the social and intellectual advantages which they offered were in part neutralised, and in some instances overbalanced, by their baleful influence upon the health and physical strength of the inhabitants. It is probable that at one time the population of several cities in England was only maintained by immigration; and when large towns were designated “the graves of mankind,” experience and calculation sanctioned the appellation. Besides certain vices, and the misery of the poor, in cities, the crowding in close rooms, the collection of putrid effluvia, and the imperfect drainage of excretions and refuse animal or vegetable matter, are the main sources of insalubrity where masses of men are collected. A city on a well-selected site, constructed with a view to the supply of atmospheric air, and the removal of all refuse matter, whether gaseous,

and at all ages, has been diminished by .06 in the total, and in classes 1, 2, and 3; it has been diminished by .03 in classes 4, 5, 6, and 7; and by .10 in the eighth class.

\* *Lancet*, 1835-36, No. 12. The materials from which these tables have been deduced were communicated to Mr. Edmonds by Henry Paul, Esq., the convener of the Committee on Churchyards in Glasgow; and have been published in the *Lancet*.

liquid, or solid, may undoubtedly be rendered little less healthy than the country. The increasing mortality in Glasgow is in part due to the accession of Irish population, who amounted, in 1831, to 35,554, or to more than a sixth part of the inhabitants. The Irish, we strongly suspect, are keeping up, if they be not introducing, the fevers of their wretched country into the heart of the British cities; this is confirmed in the case of Glasgow, by the ages at which the mortality is principally augmented, and by a Report of the Glasgow Infirmary, from which it appears that, in the year 1835, out of 3,260 patients treated, 1,258 had fevers, and of these 125 died.\*

\* This passage has inflamed the patriotism of an Irish reviewer; and Dr. Cowan, in a recent pamphlet, imagines that he has proved it to be incorrect. Dr. Cowan, however, has merely stated that the mortality increased, under 10 years of age, down to 1835; a fact which has been established in the preceding page, not by the isolated experience of single years, but by the three series of quinquennial observations. We admit this; but until some shadow of reasoning shall be advanced in favour of the opposite opinion, we cannot cease to consider the poor Irish immigrants accumulated in English cities, a prolific source of epidemic disease. They enter this kingdom through three principal ports—Bristol, Liverpool, and Glasgow. And what are their circumstances on entering? Dr. Symonds frequently found in Bristol a family of 5 or 6 "Irish adventurers" with one threadbare blanket among them. "It is a common circumstance," he says, "for a house to be tenanted by 5 or 6 families. We have found 13 individuals, men, women, and children, living promiscuously in one garret of no very large dimensions. On one occasion it happened to us to discover that 30 individuals had, on one night, slept in a room, the measurements of which did not exceed 20 ft. by 16 ft. The people thus congregated were Irish; they chanced to be on their way from London to their native country. At that period cholera was hovering over us, and, on the night to which we refer, it swooped down on 9 out of the 30, and 7 became corpses in the course of a few hours. \* \* They were under the scarcely less noxious agency of a loathsome diet."\* It is calculated that the Irish in Liverpool amount to 30,000; and fever is nearly as prevalent in Liverpool as in Glasgow. The admissions into the fever ward were, in the year ending March, 1834, 1,102; 1835, 1,097; 1836, 1,680; 1837, 2,447; 1838, 2,816. In the latter year, 2,558 cases were treated, and 419 died of fever.† It is said that Manchester, Leeds, and other manufacturing towns, in which the Irish are numerous, are comparatively free from fever. But are the Irish themselves free from fever in the inland towns? Dr. Walker, physician to the Huddersfield Infirmary, observes: "The most irksome part of our duty is the visiting the vast number of Irish domiciled in the numerous lodging-houses; where we are never without some, and usually a large number of typhus cases. Last year it was very fatal. Two Catholic priests have fallen victims to it from attending these lodging-houses. We have now about 40 or 50 cases of typhus among the Irish, most of whom require visiting. I have now been in the constant habit of giving gratuitous attendance to the out-patients of our charity for nearly a quarter of a century, and though it has fallen to my lot to see as many disgusting spectacles among the abodes of disease and poverty as any other medical man can have done, yet the present loathsome condition of our Irish lodging-houses surpasses any thing I have seen or read of in England."‡ If we follow these wanderers to the metropolis, disease is always found in their track: in the high healthy Highgate there is "a lodging-house, which is inhabited by a great number of the lowest and most abandoned persons, chiefly Irish beggars. These people frequently sleep three or more in a bed, which appears never to be changed or cleaned. There are 4 or 5 beds in some of the rooms, which are very imperfectly ventilated. This is a constant and prolific source of disease during summer and autumn; fever is seldom absent, and it is not without risk of infection that the sick can be visited. Within

‡ Medical Annual, 1838, p. 85.

No materials exist for determining the relative mortality at different ages in Scotland and Ireland; the proportions specified, in the enumeration of ages above 60, furnish, however, a certain approximation to the truth. The number living above 60, for every 100 living between 30 and 60 years was, in

|                   |                     |       |
|-------------------|---------------------|-------|
| England and Wales | (Females)           | 27.5  |
| Scotland          | (Females)           | 28.0  |
| Ireland           | (Males and Females) | 15.7  |
| Belgium           | (Males and Females) | 30.3* |

The proportion of old people in Ireland is little more than half the proportion living in Belgium: Scotland, in this respect, differs little from England.

The preceding tables and observations are founded on the returns of burials obtained from the clergy by Mr. Rickman in 1831. We have retained them in the present edition, for though the records are imperfect, they were skilfully corrected by Mr. Edmonds, and analyzed, so as to represent approximatively the mortality in different parts of England during the 18 years which ended in 1830. The census of 1841, and the new system of registration already described, supply the means of accurately determining the rates of mortality, and the average duration of life in all parts of the country. A series of calculations is now in progress, having the objects in view, and the Registrar-General has permitted us to print the subsequent tables selected from those already completed.

the last year 11 cases of severe disease have occurred in this house, mostly to be traced to the above causes: of the 11, 5 have died."† Typhus is endemic among the Irish in St. Giles and St. George, Bloomsbury, and in no other parish so far west. Let us return to Glasgow. Will a physician, so candid and so well informed as Dr. Cowan, maintain that 35,554 persons in such circumstances, and of such habits, can be introduced into any city with impunity? Will not the diseases, generated in their crowded loathsome dwellings, be communicated to the other inhabitants; whether by contagion or otherwise we stop not to inquire? And if epidemics originate in their huts in their own country, what is likely to take place in a crowded city, with narrow streets, and bad sewers? The population of Glasgow, in 1831, was found to be 202,426; and 35,554 were Irish. Dr. Cowan ascertained that, of 2,513 cases of fever received in 1836 at the Fever Hospital, 757 were Irish ‡ If the population had remained stationary, the proportion of the admissions in each class to the living would have been as follows:—

Irish population, 1,000.—Cases of fever sent to hospital in the year, 21  
Scotch, &c. - 1,000.—Cases of fever sent to hospital in the year, 10

Fever was twice as frequent among the Irish as among the other inhabitants, according to this calculation; and as patients were daily refused admission for want of room, it is not probable that the Irish were admitted in undue proportion, to the exclusion of the Scotch.

In directing attention to a weighty sanitary fact, it is far from our intention to convey any reflection upon the Irish people. We shall, in treating of epidemics, show that the English were formerly in as bad a condition as the Irish; and we must say we had imagined that any attempt to prove that England is vitally interested in the prosperity and happiness of Ireland would be rendering neither country disservice; and we think so still.

\* Manchester town sub-districts, are, Ancoats, Deansgate, St. George, London-road, Market-street.

† Liverpool comprises the whole of the Liverpool district.

‡ Manchester country sub-districts, are, Blackley, Cheetham, Fallowfield, Newton, Prestwich.

§ Extra metropolitan districts of Surrey included in the Table; Richmond and Kingston, Chertsey and Epsom, Croydon, Godstone, Reigate and Dorking, Guildford, Farnham, and Hambledon.

|| The facts after the age 25, are too few and uncertain to deserve attention in any of the districts. The results are not given here for Manchester.

NOTE.—The mortality against the age 5, is the mortality amongst persons of the age of 5 and under 10, and so of other ages.

The Table is read thus:—The mortality in Manchester amongst boys of the age of 0 and under 5, is 14.767 per cent. annually; of men of the age of 45 and under 55, it is 3.226 per cent.; at the same age in the extra-metropolitan part of Surrey, the mortality is only 4.772 per cent., and 1.430 per cent.

On the mode of expressing Age.—In ordinary language, a person who was 20 at his last birthday, is called 20 until he is 21; so in these Tables the number living placed against the age 25 are the numbers living at the age 25, and at all ages under the next age in the column, namely 30; and so in other cases.

The results are every way remarkable. How many persons would perish prematurely in the most favourable circumstances, we have no means of knowing; but here on one side of the table, we see that in Surrey, 12,284 males of all ages died in seven years, out of an average population of 94,443, while the other shows a loss of 20,288 lives in the same time, out of the much smaller average population of 79,235. The mean annual mortality per cent. was in Manchester 3·655, Liverpool 3·583, London 2·748, the suburban parts of the Manchester district 2·193, Kent 2·085, Surrey 1·856. One male in 27 died annually in Manchester, one in 54 in Surrey. The mean duration of life in Manchester is 25 years, in Surrey more than 45 years. Brief as man's life is by the law of nature, it is rendered briefer by the circumstances to which the people are now exposed in Manchester, Liverpool, and all other large towns. What these circumstances are is as well known as the causes of the mortality which ravaged camps, fleets, and prisons in former times. They affect males and females of every occupation, and of all ages. The mortality among children under 5 years of age is appalling. While 48 boys of 1000 die in Surrey, and 57 in Kent, 144 die in Liverpool, and 148 in Manchester! Between the ages of 15 and 25, there is a great influx of the healthier portion of the country population into the towns, which grow by the immigration of adults, as well as by indigenous births; accordingly the mortality at the age of 15-25, appears lower in towns, and higher in the country than it is, if allowance be made for the derangement thus produced in the tables. The mortality of females in London is so low as 6 in 1000, at an age when the mortality in the surrounding counties is from 7 to 8 in 1000. Among young men of 15-25 in London, the mortality is 8 in 1000. In the after age 25-35, the mortality of males and females is still kept down by the accession of healthy lives; from 35 to 45, when immigration ceases, the disturbance is less considerable; and at 45 to 55 is felt the full influence, no longer masked, of the deleterious atmosphere of towns poisoned by slaughter-houses, cesspools, bad sewers, the bodies of the dead, and the breath of the living, all commingled in the fluid air of which a man drinks a gallon a minute as long as he lives. At this age (45-55) the deaths to 1000 men living, are in Liverpool 34, Manchester 32, London 27, the country sub-districts round Manchester 20, Kent 16, and Surrey 15. At the age 55-65, the mortality is in Manchester 57 in 1000, Liverpool 53, London 48, Manchester country sub-districts 30, Kent 28, Surrey 28. If the mortality of females be compared, similar results will be obtained. This fact, as well as the slight difference between the mortality in Manchester and Liverpool, and the other great fact, that the mortality falls on the children in towns at all ages, from birth to 10 years of age, before their employment in any business has commenced, if they prove nothing against the influence of occupation on health, demonstrate that the mortality in towns is due to general causes, and not to any particular modification of the labour in which the inhabitants are engaged.

Government have it, we understand, in contemplation to introduce a sanatory measure, which if judiciously conceived, and efficiently carried out, will accelerate that improvement of the health of towns, which has been going on so slowly since the time of the last great plague and the fire of London.

*Kings and Peers.*—The average reigns of kings should correspond with the expectation of life at the period of accession. This varies in elective and hereditary princes. The mean age at accession is higher, and the reigns shorter, in the former, than in the latter case. The popes represent the electoral system; 156 successors of St. Peter occupied the papal chair 1023 years (800—1823). Each continued pope at an average  $6\frac{1}{2}$  years. In England, from William the Conqueror to William IV., 34 sovereigns reigned 763 years; the mean age at accession was 30 years, and the mean length of the reigns  $22\frac{1}{2}$  years. The hereditary kings were younger men on their accession than the popes: the kings who gained the throne by violence, or were chosen by the people, have been above 30 years of age in England. William the Conqueror was 42 years of age; Cromwell, 52; William III., 39; George I., 55; at the time they ascended the throne. When, as in the case of George IV. and William IV., the crown devolves upon a brother, the age at accession is advanced, and the reign shortened. The ancients reckoned three generations to a century; and the estimate is very near the truth, where the line is uninterruptedly kept up from father to son. In the English peerage  $31\frac{1}{2}$  years intervene, at an average, between the birth of father and son, in the line of ancestors of any peer. Newton, in his *Chronology*, found, upon taking 11 monarchies, that 189 kings reigned 3,597 years; and that the mean of all the reigns was 19 years.

Of the 34 English sovereigns, 10 died violent deaths; 2 died in battle; 3 by accidents; 1 was publicly executed; 4 were assassinated by other sovereigns. Suspicion of poisoning was popularly entertained in other instances. The mean expectation of life, of the 34 sovereigns at the time of their accession, was 33 years, according to the English table: they should, therefore, have died aged 63; but died actually at the age of  $52\frac{1}{2}$ ; their life was 11 years shorter than it should have been, according to the rate of mortality prevalent among the people generally in the present century. If the Manchester life table, (7th Report of Registrar-General, 8vo. p. 338,) which represents a lower mortality, be referred to, the mean duration of the reigns should have been 27 years, instead of  $22\frac{1}{2}$  years.

These facts point out the dangers which have surrounded the throne; they evince no less distinctly the progress of civilisation, in the increased security of life enjoyed by the heads of the government. Of the 17 first sovereigns, 7 died violent deaths; of the 17 last, (including Charles I.), only three died violent deaths. Sharon Turner gives lists of the reigns in the kingdoms of Kent, Wessex, Bernicia (Northumbria), and Mercia, from which it appears that the mean duration of 83 reigns, between A.D. 449—836, was 14 years: from Egbert to Harold II. (800—1065), 20 kings reigned, each upon an average 13 years. This proves incontestably that the life of sovereigns is infinitely safer in popular than in despotic—in civilised than in barbarous states. The same truth is exhibited by the following observations. In Germany (1056—1792), the reigns of 38 emperors lasted at an average 19 years; in Sweden (1066—1818), 41 kings reigned 752 years, 18 years each; in Russia (1073—1825), 50 czars reigned 750 years, or upon an average 15 years, when the English kings reigned  $22\frac{1}{2}$  years! The

lives of the nobles partook of the insecurity of those of the sovereigns, in the early ages; and they were equally interested in the progress of civilisation, which mitigated violence, and suppressed many other causes of premature death.\*

The mortality of English peers has been investigated by Mr. Edmonds.† The inquiry extended to 707 peers. The author reduced the number to 675 peers, by excluding 32 whose deaths were violent or accidental: a proceeding by which he probably proposed to render the results more applicable to the peerage of the present day; as it would otherwise have been unjustifiable to exclude deaths which are, in certain states of society, of constant occurrence, and only accidental in the same sense as a fever or a pleurisy. The number of lines of succession was 109; the number of peers observed, 675; the aggregate of ages at accession, 20,390; the aggregate of years of rule, 17,931; the average age at accession 30·21 years; the average period of rule, 26·56 years.‡ The *expectation*, or mean duration of life after accession, when the peer acceded between the ages 10—19 was 38·29 years; 20—29, 27·03 years; 30—39, 23·87 years; 40—59, 15·99 years. In other terms, the mean future duration of the life of the peers who acceded at the mean age 34½, was 23·87; nearly 24 years.

*Table showing the Numbers who entered or acceded to the Title, and the Numbers who died in each Decennial Interval of Age; also the Annual Deaths out of 100 living at each Decennial Interval of Age.*

| PEERS.                                   |     |       |       |       |       |       |       |       |       |       |

We have subjoined the rate of mortality which prevailed among the East India Company's labourers; and it will be observed, that after the influence of selection has ceased in the latter, at the age of 50 and upwards, there is a near approximation in the rates of mortality. And it must be recollected that 32 violent deaths have been excluded from the peers. Are we to infer that the mortality among peers is now higher than among labourers, crowded within the metropolis? Should we not rather infer, that as the investigation extends far back into the centuries of bloodshed and pestilence, that the lives of peers were then

\* Article by William Farr, Esq., the writer of this article, in the *British Annals of Medicine*, July 14, 1837.

† *Lancet*, Feb. 1838.

‡ 26½ years is the average duration of the reigns of the 24 sovereigns who died in the ordinary course of nature, from William I. to George IV.—*Edmonds*. The first peers are excluded from the calculation: for the reasons explained in speaking of sovereigns they are older at the period of accession, and their period of rule is shorter than that of their lineal descendants.

shorter, and are now longer, than the lives of labourers? The plague, which was born in huts, and nursed by famine, rioted in luxurious halls, and smote the highborn.

Dr. Guy and Mr. Neison have recently determined the duration of life in the males of the families of the peerage and baronetage; it is 35 years at the age 25, 27 years at 35, 18 years at 50.—(*Stat. Journal*, Mar. 1845, p. 76.)

*Literary Men.*—If the expectation of life in literary and scientific persons may be considered as represented by that of medical writers, it nearly agrees with that of the English population. M. Du Bois took out the ages of 850 medical men mentioned in an historical dictionary. We have excluded 72 who died under the age of 40, and extended the inquiry no further, as men have scarcely had a chance of attaining even a place in a biographical dictionary before that age.

*Expectation of Life in Medical Writers, deduced from 778 Lives.*

*Army.*—The mortality of the military shows at what expense of life and health we have extended our power into all the quarters and climates of the globe. The constitution of a race of men is fitted to the locality and the atmosphere in which they are born; and they must possess a redundant vitality to acquire and retain possessions in a climate different from their own, and destructive of a body not moulded by its influences into a correspondent temperament. By the subjoined table of the mortality of the British army, it will be seen that the soldier, in the prime of his physical powers, is more exposed to death every step he takes from his native climate, till at last the man of 28 years is subject, in the West Indies, to the same mortality as the man of 80 remaining in Britain. By a judicious choice of stations, some very obvious hygiological precautions, and a temperate regimen, little doubt can be entertained that the European mortality may be diminished by a half in the tropical colonies. The mortality of the troops is double that of the officers. Is not this mainly due to the crowding of the men in barracks?

This interrogatory, which was put in the former edition, may now be answered in the affirmative. The authors of the valuable Report upon the mortality among the troops in the West Indies have the following observation:—"So far as we can learn, the extent of barrack accommodation to the soldiers serving in the windward and leeward command, did not, prior to 1827, exceed from 22 to 23 inches in breadth to each, and as that would not admit of their having bedsteads, they slept in hammocks; by which expedient as many men could be placed in one apartment as the breadth of their bodies would admit." They then give some details of the barrack accommodation at Tobago, in 1826, at that time said to be the best in the command: from which it appears that the number of cubic feet allotted to each man varied

from 200 to 311 feet! Since 1827 the barrack accommodation for each man has been extended to 350—400 cubic feet! and this in the hot moist climate of the West Indies! Why, these black-holes would treble the mortality in a temperate climate! This is a remarkable proof of the utility of Reports. We have no doubt that steps have been, or that they will very speedily be taken, to have the accommodations improved, and the mortality reduced.

*Table of the Mortality of the British Army, showing the Mean Number of Annual Deaths out of 100 Living at each Station mentioned.\**

The mortality of the native troops in the Madras presidency was only 1.4 per cent.; that of the European troops was quadrupled in Bengal. At home 1.5, in Bengal 5.7, per cent. of the European troops died. The climate of the East Indies is, therefore, congenial to the Hindoos, and only extraordinarily fatal to foreigners. The same holds of other countries, not poisoned by vegetable or animal effluvia, where their extremes of heat and cold, moisture and dryness, are not excessive.

The mean mortality of the French infantry at home is higher than that stated above for the English army.†

| The whole Windward and Leeward Command . . . . } | 86,661              | 6,803   | 7.8                     | 40,934              | 1,645   | 4.0                     |
| The Jamaica Command . . . .                      | 51,567              | 6,254   | 12.1                    | 5,729               | 172     | 3.0                     |

The numbers in the whole command do not quite agree with the sum of the numbers in each separate command. To obtain the mean constant strength, the aggregate strength must be divided by 20. For various reasons, a few of the deaths were not returned by the medical officers; thus the War Office Returns make the deaths in the windward and leeward command 7,069, instead of 6,803. The strength was also overstated in the medical reports by about 10 per cent. The corrections for these errors make the annual mortality in the windward and leeward command 9.6 per cent.; in Jamaica, 14.1 per cent.: about 0.002 died on the passage home from Jamaica; 0.0035 from the other command. Since 1825, it appears that 0.016 were invalided from Jamaica; 0.024 from the other islands.

As in all unhealthy places, the mortality fluctuated to a great extent in different years: thus in Jamaica the annual rates of mortality in the years 1819, 1825, 1827, and 1831, were 29.4, 30.7, 22.4, and 13.3 per cent. In the years 1823, 1829, 1835, and 1836, the rates were respectively 6.5, 6.2, 7.5, 6.1 per cent. In the former years yellow fever was epidemic. The mortality of different stations in the same island exhibits equal discrepancies. The following were the annual rates of mortality at different stations in Jamaica: Montego Bay, .18; Spanish Town, .16; Port Antonio, .15; Up-Park Camp, .14; Port Royal, .11; Falmouth, .10; Stoney Hill, .09; Lucia, .08; Fort Augusta, .07; Maroon Town, .03. *Montego Bay* is a town about 15 miles west of Falmouth. It lies at the foot of a range of mountains, which surround it upon every side except the north-west, where they open to the sea, and form the bay, at the extremity of which the town is built. The sea breeze is obstructed by the mountains; and the heat is more intense than in any other part of this island. *Maroon Town* is situated on a high range called the Trelawney Mountains, in the in-

terior of the island, upwards of 2,000 feet above the level of the sea. It is surrounded by still loftier mountains, clothed to the summit with stately trees; the view to the north-east commands a vast expanse of sea and land. About 200 acres are occupied by the troops. The barracks and houses are built upon small detached eminences; and the married soldiers live in small huts, built by themselves, bordering on the parade ground. If the troops lived in separate dwellings the mortality would be greatly diminished in the other stations. This is proved by the low mortality of the officers in the 19 years 1818—36.

The mortality increases with age in the West Indies. The ordinary rate at which the mortality increases in a healthy climate, is 3 per cent. for every year of age from 15 to 55: here it will be perceived that the increase was more rapid; in such a way, however, that from 18—25 to 25—33, the increase was 5 per cent. every year; from 25—33 to 33—40, it was 4 per cent.; from 33—40 to 40—50, it descended to the usual rate, and was 3 per cent. on every advance of one year. This applies to the windward and leeward command. In Jamaica the result was similar: the annual mortality increased 8 per cent. at first, and then 4 per cent. every year.

This bears upon acclimatisation which the authors have investigated with considerable care. Nothing is of greater practical importance to the army than this question: Do men become inured to the pernicious influences of a climate, so as at last to brave them with impunity? or are the survivors in a better condition to meet its dangers than newcomers? The authors of the report decide these questions in the negative. The following\* are the facts which they adduce; the first series is in favour of, the second against, their conclusion.

\* Exclusive of 10 deaths from accident, suicide, and other causes not connected with climate.

| Year of Service .               | WINDWARD and LEEWARD ISLANDS. |        |       |       |       |       |       |       |       |       |

| Annual Deaths per Cent. . . . } | 7.7                           | 8.7    | 8.9   | 6.3   | 6.1   | 7.9   | 8.3   | 7.3   | 12.0  | 10.9  |
|                                 | JAMAICA.                      |        |       |       |       |       |       |       |       |       |
|                                 | 1                             | 2      | 3     | 4     | 5     | 6     | 7     | 8     | 9     | 10    |
| Strength . . . .                | 7,772                         | 7,172  | 6,248 | 5,670 | 4,794 | 3,275 | 3,196 | 2,496 | 2,367 | 1,884 |
| Deaths . . . .                  | 1,776                         | 860    | 682   | 827   | 532   | 448   | 299   | 208   | 150   | 179   |
| Annual Deaths per Cent. . . . } | 22.8                          | 12.0   | 10.9  | 14.6  | 11.1  | 13.7  | 12.5  | 8.3   | 6.3   | 9.5   |

In the windward and leeward islands, it will be observed that the annual mortality increased, instead of diminishing, with the term of service: it was 7.6 per cent. in the first five years; 9.5 in the second. The reverse occurred in Jamaica; for the rate was 15 per cent. in the first five years; 10 per cent. in the second five years. But by uniting the two series of observations, the following results are obtained:

|                             | Years of Life. | Deaths. | Annual Deaths per cent. |
|-----------------------------|----------------|---------|-------------------------|
| First 5 years of service .  | 79,944         | 8,349   | 10.4                    |
| Second 5 years of service . | 40,611         | 3,984   | 9.8                     |

The troops sent out to the West Indies from this country are, we believe, healthy men; they are in the technical sense *select* lives; and according to the experience of life annuitants, and of the assurance offices, the mortality should be excessively low in the first year, and even the first five years; while it should afterwards rapidly increase. But this progression was inverted; and the mortality diminished as the men grew older, instead of increasing 3 per cent. for every year of service. This fact is in favour of acclimatisation, and must be borne in mind in reading the report referred to. At the same time, we can never expect men to accustom themselves to take arsenic, nor to live in the crowded barracks and swampy stations of the West Indies with impunity. Since this was written, the troops in the West Indies have been supplied with fresh (instead of salt) provisions; and the stations in Jamaica have been removed from the insalubrious plains, to the healthy highlands of the interior, and the effect on their health has been most favourable. These beneficial measures were introduced when Lord Howick, now Earl Grey, was Secretary at War.

*Army in War.*—The mortality of an army in a campaign is greatly increased not only by the deaths from fighting, but by the sickness induced by hunger, fatigue, and crowding in fortified cities. This is exemplified by the returns in the adjutant-general's office of the loss of life and the sickness of the British forces\*, in the Peninsular wars. "During the last 41 months, or from the 25th of December, 1810, to the 25th of May, 1814, the total deaths of private soldiers of the army

\* A paper by Mr. Edmonds, in the *Lancet*, April 28, 1838.

amounted to 33,829; the total deaths of officers in the same time amounted to 940. The average numbers living during this period, derived from 41 monthly musters, were 61,511 privates, and 2,716 officers; consequently, the average annual rates of mortality during this period were 16·1 per cent. for privates, and 10·1 per cent. for officers; that is, the total mortality of privates was more than 50 per cent. greater than that of officers. In battle there is a great difference between the mortalities of officers of different ranks. Field officers and captains suffer much more severely than lieutenants, who, again, suffer more severely than ensigns. The mortality of captains from battle is double that of ensigns." The difference is partly due to the greater age of the seniors, and partly to their greater exposure. And it appears that the proportion of officers actually engaged in battle is greater than the proportion of privates, which accounts to a certain extent for the higher mortality. There were 362 captains and subalterns killed, and 1,986 wounded, in the 41 months; 6,674 privates were killed: or the captains were killed at the rate of 4·9 per cent. per annum, the privates at the rate of 3·2 per cent.; and, as the number of officers who die of wounds after the day of action is generally equal to one-third part of the deaths occurring on the day of action, one-third part was added to the former rates, and gave 6·6 per cent. for officers, and 4·2 per cent. for privates killed and fatally wounded. The annual mortality from all causes, *except battle*, was 3·7 per cent. for captains, and 11·9 per cent. for private soldiers! The British army was victorious, and succeeded in driving the French from the Spanish Peninsula, yet 11·9 per cent. of the privates died of diseases—nearly three times as many as died from direct injury. An army, then, has infinitely less to dread from the arms of an enemy than from disease; and the low mortality of the officers proves distinctly that the mortality of the men from disease may be much reduced.

*Table showing the Total Deaths of different Ranks which occurred in the Peninsular Army during 41 months, ending 25th May, 1814; also, showing the average Number Living, and the proportional Mortality of each Rank during a Year.*

| Rank.                             | Total Deaths during 41 Months. | Probable Distribution of these Deaths. |                                 | Average Number Living during the 41 Months. | Proportion Living of each Rank. | Mortality from all Causes per Cent. per Annum. |

The English army of 61,511 men had 13,815, or 22½ per cent., constantly sick during the three years and five months, and the sickness from wounds did not amount to more than 1½ per cent. It is probable that, if some of the subjects discussed in this paper, if the causes of disease, and the means of their removal, had been as well understood as the use of the amputating knife and the *Materia Medica*, the Duke of Wellington would have had 8,000 more men at his command, and the country would have had to pay and support less than 5,815 inefficient men constantly sick in hospitals. In that case 36,999 years of sickness might have been saved. It is right to add that if the difficulty of commanding an army increases with the numbers, the difficulty of supplying them with food, and preserving the men in health, increases in a still more rapid ratio.

In a foreign war the soldiers are the direct sufferers; in a civil war, famine, distress, and epidemics, cause an augmentation in the rate of mortality in both sexes, and at all ages. There is, however, only one series of observations by which this can be directly proved; and that is the following, which we procured from Sweden through the liberality of the consul (C. Tottie, Esq.) Sweden was exposed to a civil and a foreign war in the five years 1806—10: the 20 years of 1811—

30 were years of peace. The difference in the mortality was well marked.

*Annual Mortality per cent., at 20 different Ages, in Sweden.*

*Annual Mortality per cent., at all Ages, in Sweden.*

|                         | Males. | Females. | Mean. |
|-------------------------|--------|----------|-------|
| Before the War, 1801-5  | 2.56   | 2.33     | 2.45  |
| Civil War, 1806-10      | 3.11   | 3.02     | 3.06  |
| Internal Peace, 1811-30 | 2.63   | 2.34     | 2.48  |

The civil war caused the annual mortality to rise 25 per cent. ; and the effect was felt not only by the able-bodied men engaged in warfare, but by the old man, the young woman, and the child upon the mother's breast. The occupation of a country by foreign forces, particularly if there be much fighting, will produce nearly the same effect.

*The Navy.*—The dangers of the sea have, perhaps, never been exaggerated ; but by that peculiarity which leads mankind to view murder, hydrophobia, and lightning with dread, while they hear with indifference of a narrow street, a bad sewer, or a fever, much unnecessary horror has been entertained of shipwreck, and little has been thought of the insidious causes of death which have often decimated our fleets, and defeated more than one expedition. Before the reign of Henry VIII. and Elizabeth, when the first large vessels were equipped, scurvy was little noticed. A free ventilation was inevitable in small open ships ; long voyages were rarely attempted ; and our navies were never stationed upon the destructive coasts of Africa or the West Indies. Scurvy, dysentery, fever—all the inevitable consequences of famine, bad food,

filth, and crowded ships—were experienced by the voyagers of the 17th century. In 1780 the Channel Fleet sent 11,732 sick to Haslar Hospital; 1,457 had scurvy, 240 dysentery, 5,539 fever! This is a fair specimen of the health of the British fleet, down to the end of the 18th century. Neither the ships nor the men could keep the sea more than two months.\*

The records of the navy show that the mortality at sea may be raised to any extent; and that the heads of the naval department have the men's lives so absolutely in their hands, that a given number may be put to death at will, without employing any other agency than bad food and bad air. To establish this fact, we shall state two or three experiments upon a large scale, with others, to show that the mortality at sea may be brought down to an inconsiderable fraction. Passing over the earlier voyages, we find that the first fleet of the East India Company consisted of five small ships, of 1,500 tons burden, carrying 528 men. The fleet sailed on the 13th February, 1601, but was detained, and did not pass the tropic of Capricorn before July 24th. Many of the men fell sick; and by August 1st, so many had the scurvy, that in all the ships, except the Admiral (the ship commanded by the admiral, then called the general), they were hardly able to manage the sails. They arrived at the Cape of Good Hope, September 9th. Though General Lancaster's ship contained double the number of men, he had not so many sick, nor did he lose so many men as the rest. He had brought with him to sea several bottles of lemon-juice, of which he gave to each man fasting. But, of the 528 men, 100 died before, and five after, landing, in the voyage of seven months to the Cape. Here the tide of sickness turned: they purchased 1,000 sheep and 42 oxen, large and fat, and had such "royal refreshing," that all the men recovered their health and strength. The fleet put to sea October 24th; but we shall accompany them no further. This is a good type of the great majority of the early voyages.†

Anson sailed from St. Helena with five ships of war, a sloop, two victuallers, and 1,710 men, September 18th, 1740. Two ships of war separated and returned. The *Wager* was wrecked. Of the ships that remained, the *Centurion* had 506 men, the *Gloucester* 374, the *Tryal* sloop 81. The *Centurion* lost two men on the passage to Madeira, (38 days); after a stoppage of nine days at Madeira, the fleet reached St. Catherine's on the 92d day of the voyage. The ships had become remarkably sickly; many died from fevers and dysenteries. The *Centurion* sent 80 sick—16 per cent. of the crew—ashore, and the other ships as many in proportion. Upon the 123d day of the voyage, the ships sailed from St. Catherine's, and traversed the Straits of Lemaire; scurvy began to make its appearance about the 171st day; in April, the next month, 43 died on board the *Centurion*; in May, double that number. Fevers, dysenteries, gangrenous ulcers, were confounded by the early navigators under the name of scurvy; and the historian of the voyage says, that scurvy produced putrid fevers, pleurisies, and jaundice; the men had discoloured spots dispersed over

\* Sir James Saumarez, cited by Sir G. Blane. *Dissertations*, vol. i., p. 18.

† Kerr's Collection of Voyages.

the body; the gums were putrid, the legs swollen, the bones decayed; fungous ulcers infected the legs; the seamen's spirits were shrouded in gloom; their lassitude was extreme; and they swooned and died upon the least exertion. The *Centurion* and *Tryal* arrived at Juan Fernandez June 16th, 145 days after leaving St. Catherine's, and landed 167 sick. The *Gloucester* arrived 37 days later, and sustained still greater losses.

The loss of men in the three vessels, down to September 1st, was as follows:—

|                         | Numbers<br>at St. Helen's. | Died<br>in 10 Months. | Remaining Alive<br>September 1st. |
|-------------------------|----------------------------|-----------------------|-----------------------------------|
| <i>Centurion</i> . . .  | 506                        | 292                   | 214                               |
| <i>Tryal</i> . . .      | 81                         | 42                    | 39                                |
| <i>Gloucester</i> . . . | 374                        | 292                   | 82                                |
| Total . . .             | 961                        | 626                   | 335                               |

At Juan Fernandez the crews recovered; but in traversing the Pacific, the sickness broke out again, and eight or ten men died daily. About half the 335 men died in the ensuing twelve months; and out of 199, including negroes and Indians, 128 were landed sick at Tinian, August 26th, 1742. The *Centurion* took the Spanish galleon, and returned to England, after an absence of three years and nine months. The Dutch first succeeded in reducing the mortality at sea. The *Nassau Fleet*, of 11 sail, 5,260 tons burthen, and 1,637 men, circumnavigated the globe; 1,228 men remained alive when it reached the Ladrone Islands, February, 1625, and 32 had deserted; 36 died violent deaths. Schouten and Le Maire, two Dutch merchants, reduced the mortality almost to a minimum; Schouten sailed, June 14th, 1615, from the Texel, with two vessels, carrying 87 men, round Cape Horn, and reached Batavia October 31st, 1616, with the loss of only three men. Captain Cook's second voyage was attended with still greater success, as the men were treated with still greater care. The *Resolution* left Deptford April 9th, 1772, with 112 men; was exposed to the extremes of heat and cold in the torrid and frigid zones of the southern hemisphere; and returned at the end of three years, with the loss of only four men—three by accident, one by disease. In a paper read before the Royal Society, Cook described minutely the means which he employed to secure the health of his crew; the care taken in the selection of a vessel, in drying and ventilating, in providing good provisions, antiscorbutics, and an abundant supply of fresh water. The third voyage was equally healthy. The Royal Society gave him the Copley medal; and the art of preserving the health of the navy became popularly known in the narrative of his voyages. Little use, however, was made of Cook's discoveries by the Admiralty, until Lord Melville was impeached; for in the American war, to keep up a force of 60,000 to 70,000 seamen, 170,910 were raised in the five years 1776—80; 1,243 were killed, 18,545 died from disease.

Ships are commissioned for three years; the men are paid off at the end of the term, and none but *healthy* individuals are allowed to re-enter the service. The annual mortality among seamen, therefore, should not exceed 1 per 100 in the temperate zone. It is to be regretted that no accurate statistical returns of the mortality of the British navy have ever been published. The comparative view of the health of the navy, calculated by M. Dupin, is erroneous. It makes the annual attacks 9·3 per cent., the deaths 0·7 per cent. The deaths are the deaths in the naval hospitals; they do not include the deaths in the ships. Now, the deaths in the hospitals amounted, in 1813, to 977 (the number on which M. Dupin's calculation was founded), and the deaths on shipboard (which M. Dupin overlooked) amounted, on an average of the three preceding years, to 4,553. Instead of 698 annual deaths out of 100,000, the ratio of deaths was 4,048. The mortality of assistant surgeons is now, we believe, nearly 3·4 per cent. per annum.

Reports on the health of the navy have appeared since the former edition of this work. The results have been compared with those of the army returns by Colonel Tulloch, and Dr. T. Graham Balfour. || We extract the following from Dr. Balfour's paper, which is a comparison between the mortality of the military in Ceylon, and the navy in the East India command, which extends from the coast of Asia to New Holland and the islands of the north Pacific; the operations being principally directed to the shores of the bay of Bengal, and the Coromandel coast. In the navy 18,381 cases of sickness were treated, 224 seamen died, 435 were invalided in the 7 years, 1830-36, out of a force ranging from 1,523 to 2,204, and equivalent to 12,942 living one year. The strength of the army ranged from 2,002 to 2,192, and was equal to 14,590 men living a year. To 1,000 of the navy 1,420 cases were treated, 17·3 men died, 33·6 were invalided annually. To 1,000 of the army, 1,356 cases were treated, 49·8 men died, and 3·6 were inva-

\* Thirty-two deserted; 7 were poisoned; 29 killed in battle or by savages.

§ One killed by a fall.

|| Papers read at the Statistical Society, 1841, Feb. 15, and 1844, Nov. 18.

lided annually. Exclusive of wounds and injuries, chiefly accidents; the cases of sickness to 1,000 men were 1,225 in the navy, 1,213 in the army; the mortality 15·2 in the navy, and 46·2 in the army. The excess of mortality in the army arose chiefly on dysentery and bowel complaints, (navy ·0046, army ·0194,) cholera, liver diseases, diseases of the lungs, and fevers. The deaths from consumption and spitting of blood in the army were 57, in the navy 18; the cases 130 and 59. Catarrh appears to be much more common in the navy, (in which 2,211 cases are recorded, but only 2 deaths,) than in the army, where 818 cases, and 13 deaths occurred. It is not easy to understand what is meant by "common continued fever," in the returns of both services; from which it would appear that only 21 in 1,541 navy cases, and 18 in 3,910 army cases, terminated fatally. Dr. Balfour intimates that those "fevers" might have been trivial cases, resulting in the army from exposure to "the heat of the sun," and "intoxicating liquors." In the navy returns there appears among the "diseases of the brain," an extraordinary number of cases of "vertigo" and "headaches," which Dr. Balfour suggests would have been entered in the army as "ephemeral fever." The effects of grog and drink thus undergo widely different nosological metamorphoses in the two services. It is to be regretted that the forms and nomenclature of the returns are not revised, and brought up to the level of the present state of medical science.

*Prisons.*—Considerable misapprehension prevails respecting the mortality prevailing in prisons. The deaths have been divided by the committals, instead of the average population, and the quotient has been compared with the annual mortality out of doors. In this way the result appears so much in favour of the prisoners, at first sight, that a French minister declared the gaols the healthiest places in the world; and in a recent report, one of the English inspectors "confidently affirmed that in very few situations of life is an adult less likely to die than in a well-conducted English prison."\* Only 1 in 500 prisoners dies; so, according to this view, if a man desires to live to the age of Methusaleh, he should go to Newgate.

As serious intentions appear to be entertained of substituting the Penitentiary system for transportation; and in the greater number of cases for hanging, we have endeavoured to ascertain the actual effect of imprisonment upon mortality. In the elaborate gaol returns under 4 Geo. IV., c. 64, and 5 Geo. IV., c. 12, the average population of the respective gaols is not given; but a sufficiently near approximation to this may be obtained from the numbers "remaining," at the Michaelmas term of every year, when the returns are made. We took the first 93 gaols (omitting only 5 or 6 which were incomplete) for the 5 years Michaelmas 1826—31; and found that the mean constant population, from 6 enumerations, amounted to 9,409; while the deaths in the 5 years were 769. The mean annual mortality was 16·3 per 1000.

| Mean Prison Population. | Annual Deaths. | Annual Deaths per 1000. |
|-------------------------|----------------|-------------------------|
| 9,409                   | 153·8          | 16·3                    |

In deciding whether this is a high or a low rate of mortality, the *age*

\* Report on Prisons, by Dr. Bisset Hawkins, 1836, p. 2.

of the prisoners must be taken into the calculation ; and for the present purpose it may be assumed to be 20—30 years. Of 23,612 committed in 1837, not less than 14,396 were “aged 30 years and above 16.”\* We subjoin a comparative view of the annual mortality of different populations at the age 20—30.

*Annual Deaths to 1000 Living.*

| Sweden, 1811-1830. | Belgium, 1829. | England and Wales,<br>1813-30. | English Prisons, Mich.,<br>1834-31. |
|--------------------|----------------|--------------------------------|-------------------------------------|
| 8                  | 9              | 10                             | 16                                  |

Here it will be observed at a glance, that the mortality in the English prisons was 60 per cent. higher than the mortality at the same ages in England and Wales.

The extent to which a class of individuals are affected in epidemics is a good sanatory test of the circumstances in which they are placed. In the year ending Michaelmas 1832, when cholera was epidemic, the deaths in the same prisons amounted to 300.

| Year. | Mean Prison Population. | Deaths. | Annual Deaths, per 1000. |
|-------|-------------------------|---------|--------------------------|
| 1832  | 10,497                  | 300     | 29                       |

The mortality was nearly three times as high as the ordinary mortality in England and Wales ; and we know that the general mortality at the same age was raised to nothing near this pitch.

Again, the prisoners rarely labour under any serious disease at the time of their committal. And it will be found by a reference to the facts, that the mean term of their detention is 48 days : for there were 267,771 committals to 35,503 years of imprisonment, or nearly 7 weeks to each committal. The prisoners at the time of their committal must be considered in the same light as those who seek to assure their lives : they have no dangerous disease, and their health has scarcely time to become seriously affected in 48 days before they are removed. Of 12,886 persons entering the Equitable Assurance Society, between the ages 20—40, 43 died in the ensuing year : if they had all been committed to the English prisons, 210 at least would have perished. In the second year of the policy 113 died out of 12,361 ; in the third year, 99 out of 10,982.

If this doctrine of the mortality in prisons be correct, it may be expected that the health of the prisoners will gradually decline, and the mortality increase as the imprisonment is protracted. This is the case. The health of many of the prisoners before they reach the hulks is in a bad state ; and the mortality in the convict hulks is nearly double the mortality in the prisons. 907 deaths occurred in the Convict Hulk Establishment, England, in 9 years (1820—9, exclusive of 1821), when the average convict population was 3,583. The mean term of detention was 1·22 years, or 1 year 2½ months. It gives, therefore, the following results :—

*Annual Mortality per 1000.*

| First Year.<br>Equitable Society. | General Population,<br>England and Wales. | English Prisons. | Hulk Establishments. |
|-----------------------------------|-------------------------------------------|------------------|----------------------|
| 3                                 | 10                                        | 16               | 28                   |

Such is the effect of inaction, privation, and confinement in a close atmosphere, upon the criminal. It may be said that the prisoners are

\* Table showing the Number of Criminal Offenders in the year 1837.

men of bad shattered constitutions. But does this apply to the great majority? and would not imprisonment have quite as fatal an effect upon persons unaccustomed to privations of any kind?

After every allowance has been made, if 200 deaths occur in the English prisons annually, 60 must be set down as the direct effect of imprisonment; and 50 of the 100 annual deaths in the hulks must be ascribed to the punishment. Only 8 criminals were executed in England and Wales during the year 1837; while in the 5 years ending 1834, the average annual number of executions was 51.

We submit these facts with great deference to those who have studied criminal punishment, and particularly to those humane individuals who would abolish capital punishments and substitute solitary confinement in cells for transportation. Let them bear in mind that *the present system of imprisonment destroys 10 times as many lives, and produces 1000 times as much actual suffering, as the executioner.* The mortality of prisons has been greatly reduced: and admits of further reduction, although no system of pains and penalties can be conceived, which will not increase sickness and mortality; for it is an eternal law of our nature that sensation has a tendency to cease, when deprived of objects, or thrown into agony: mercy has made pain the gate of death.

We have no means of knowing the mortality among convicts in the penal colonies; but, judging from all analogies, the immediate effect of assembling them in large buildings and solitary cells would be to raise the mortality very considerably. This is not an insuperable objection to the Penitentiary system; but it must be taken into account as a part of the punishment, which, while it injures the health and destroys more lives than the executioner, produces little impression upon the minds of the spectators.

We shall here add, from a paper by Mr. H. Marshall, the mean number of native prisoners confined in gaols throughout the presidencies of Bengal and Agra during the year 1833; the number of deaths, and the ratio of deaths per 1000, of the mean strength.

| Year. | Mean Prison Population. | Died. | Deaths per 1000. |
|-------|-------------------------|-------|------------------|
| 1833  | 39,658                  | 2,613 | 66               |

Eight hundred and eighty-two of the deaths were from enteritis, dysentery, and diarrhoea, 586 from cholera, 511 from fevers. The ratio of mortality among the native troops of the same presidencies was 10·6 per 1000, in 1833.\*

Dr. Baly, the physician to the Millbank Penitentiary, has latterly instituted an extensive inquiry into the mortality and fatal diseases of that and other penal establishments.† Dr. Baly's investigations con-

\* *British Annals of Medicine*, 1837, p. 490. The materials were derived from a *Report on the Medical Management of the native Gaols throughout these Governments*. Mr. M. justly adds, that great praise is due to Mr. Hutchinson for collecting and publishing the statistical materials which are appended to this report.

† Paper on the Mortality in Prisons, &c., by W. Baly, M.D. Read Feb. 25, 1845. See *Trans. of Med. and Chirurg. Soc.* for that year. Dr. Baly's is one of the best papers, which have appeared in the Transactions of this learned Society, and throws more light on the effects of imprisonment than any other publication in this or any other country.

firm and extend the principles laid down in the above sketch, which appeared in the former edition of this work. In the 18 years, 1825-1842, the total number of deaths in the Millbank Penitentiary amounted to 205; the average number of prisoners during the same period was 532; and the average annual mortality was therefore 21 in 1000. But besides the 205 prisoners who died in the Penitentiary, 355 were invalided, or pardoned on medical grounds; and according to Dr. Baly's estimate, 123 of the 355 cases would have terminated fatally before the completion of imprisonment, had no pardons been granted. The mortality to which confinement gave rise was therefore 34, or, excluding 31 deaths from cholera, 31 in a 1000 annually; while the mortality in London between the ages 15 and 70 is about 15 in 1000. "The criminal's liability to die was more than doubled by imprisonment in the Penitentiary."

The average number of prisoners (1838-41) in 36 of the largest county gaols was 8657, the deaths in the five years 823, or 19 per 1000 annually; or after a correction required for pardons 23 per 1000 annually. The average duration of imprisonment in the English county gaols was about 46 days; in the Penitentiary 2 years. Dr. Baly shows in the following table, that the mortality goes on increasing from the first to the fourth year of confinement, when it is more than quadrupled; for 13 in 1000 die in the first, 57 in 1000 in the fourth year.

| Years.  | Number of Prisoners exposed to the Chance of Death. | Deaths in the Penitentiary. | Prisoners Pardoned. | Total Deaths (estimated). | Deaths to 1000 Prisoners. |
|---------|-----------------------------------------------------|-----------------------------|---------------------|---------------------------|---------------------------|
| 1st . . | 3,365                                               | 38                          | 20                  | 43                        | 13                        |
| 2nd . . | 2,682                                               | 61                          | 100                 | 96                        | 36                        |
| 3rd . . | 1,645                                               | 41                          | 130                 | 86                        | 52                        |
| 4th . . | 611                                                 | 10                          | 73                  | 35                        | 57                        |
| 5th . . | 94                                                  | ..                          | 13                  | 4                         | 44                        |

In the first 3 months of confinement, not 1 convict was pardoned and only 1 in 3571 died; in the second 3 months 15 died in 3470, and 1 was pardoned.

The mortality of men in twelve great prisons of France during each of 10 years of imprisonment was 37·6, 57, 59, 55, 41, 41, 41, 39, 31, 36 to 1000 living in the first, second, &c. years of imprisonment. In the Eastern Penitentiary, Philadelphia, the mortality was ·022 in the first year of imprisonment, ·048 in the second, ·039 in the third year, and ·025 in the fourth year. The highest degree of mortality appears to be experienced generally in the third and fourth years of imprisonment.

"Fever, formerly such a scourge, is now comparatively a rare disease in the English gaols; it does not produce in ten years as many deaths as it formerly caused in one, and I (Dr. Baly) believe never rages in them as a contagious epidemic. Yet both fevers and bowel complaints are, even at the present period, much more frequent causes of death in prisons than amongst the general population." (P. 61 of Dr. Baly's paper.)

The writer shows that the mortality from *fevers and bowel complaints* among persons between the ages of 15 and 60 in London is 1·2 annually; while among the prisoners of 32 county gaols it is 3·4, of Millbank Penitentiary 5·9; of Wakefield House of Correction 8·9 to 1000 from the same causes. These diseases are promoted by bad drainage, dirt, crowding, poor unvaried diet.

Consumption and scrofula are shown, by irrefragable evidence, to be the diseases to which the excessive mortality of prisoners under long confinement is due. Thus while in London 4·4 in 1000 persons between the ages of 15 and 70 die annually of consumption, the proportion of deaths in the Millbank Penitentiary was 7·6 in 1000; and it is estimated that 5·6 should be added to them from those pardoned; making in all 13·2 per 1000 or three times the ordinary mortality of the population from consumption. About 2·87 in 1000 convicts die of other scrofulous diseases; which prove fatal to only ·03 in 1000 of the general population. In 1840, of 1052 prisoners received into the Penitentiary 12 had symptoms of consumption; of the 1040 remaining only 523 were Penitentiary prisoners. *Forty-seven* of the 523 came under treatment, and 17 died of consumption before the end of 1843. Fourteen of the 1052 prisoners had, on admission, signs of scrofula, combined in 4 cases with consumption; 527 of the 1038 remaining were Penitentiary prisoners, and 37 of them before the end of 1843 came under treatment for external glandular scrofula, which was combined in 14 cases with consumption. The developement of these diseases is due to deficient ventilation, cold, sedentary occupations, and the want of exercise, a listless if not dejected state of mind, and poorness of diet; some of which have no necessary connection with a state of incarceration.

*Workhouses.*—The following tables will exhibit the mortality in workhouses. They are from the Appendix to a Report by the Select Committee on the Poor Law Amendment Act (1838).—Medical Evidence —

| Year 1837.                                                         | Average Number constantly Resident. |          | Average Number constantly |         |          | Admitted Ill. |
|--------------------------------------------------------------------|-------------------------------------|----------|---------------------------|---------|----------|---------------|
|                                                                    | Males.                              | Females. | Sick.                     | Infirm. | Healthy. |               |
| Ten Metropolitan Workhouses                                        | 1,252                               | 1,926    | 462                       | 1,591   | 1,125    | 1,316         |
| One Hundred Workhouses in various Counties, taken indiscriminately | 4,650                               | 4,485    | 945                       | 2,864   | 5,334    | 2,717         |

| Year 1837.                                                         | Total Admitted. |          | Total Discharged, including Deaths. |          | Total Deaths. |          |
|--------------------------------------------------------------------|-----------------|----------|-------------------------------------|----------|---------------|----------|
|                                                                    | Males.          | Females. | Males.                              | Females. | Males.        | Females. |
| Ten Metropolitan Workhouses                                        | 2,316           | 2,942    | 2,174                               | 2,749    | 402           | 504      |
| One Hundred Workhouses in various Counties, taken indiscriminately | 10,764          | 9,172    | 8,935                               | 7,341    | 970           | 676      |

Some of the results deducible from the above facts are contained in the annexed table.

|                                                                    | Average Number of Paupers in each Workhouse. | Proportion in 100 Paupers. |         |          | Annual Deaths to 100 constantly Resident. |          |       |
|--------------------------------------------------------------------|----------------------------------------------|----------------------------|---------|----------|-------------------------------------------|----------|-------|
|                                                                    |                                              | Sick.                      | Infirm. | Healthy. | Males.                                    | Females. | Mean. |
| Ten Metropolitan Workhouses                                        | 317·80                                       | 14·5                       | 50·1    | 35·4     | 32·1                                      | 26·2     | 29·1  |
| One Hundred Workhouses in various Counties, taken indiscriminately | 91·25                                        | 10·3                       | 31·3    | 58·3     | 20·9                                      | 15·1     | 18·0  |

It will be observed that the mortality was highest in the metropolitan workhouses, and among males. This immense mortality is not confined to workhouses under the New Poor Law Regulations: it is, *cæteris paribus*, equally high in all workhouses; and is an insuperable objection to the extension of the workhouse test (so called) or its substitution for a labour test. The ages of the inmates may be conjectured from the following enumeration made at the same time as the returns:—

|             | 0-10 | 10-20 | 20-40 | 40-60 | 60-70 | 70, &c. | Total. |
|-------------|------|-------|-------|-------|-------|---------|--------|
| Sick . .    | 43   | 34    | 61    | 76    | 52    | 53      | ..     |
| Infirm . .  | 7    | 12    | 59    | 220   | 362   | 369     | ..     |
| Healthy . . | 300  | 215   | 148   | 174   | 61    | 13      | ..     |
| Total . .   | 350  | 261   | 268   | 470   | 475   | 425     | 2,259  |

Twenty-five in 100 were sick when admitted into the metropolitan workhouses; 14 in 100 when admitted in the workhouses in other unions. This will account for part of the excessive mortality; infirmity for another part; age for a third part; leaving a large residual mortality to be accounted for in the same manner as the mortality of prisons. The mortality of paupers out of doors has not been ascertained; the mortality is probably raised 50 per cent. by confinement in the workhouses. In a depression of trade, or in a densely inhabited district, it must be considered a hazardous experiment to bring crowds of the sickly and depressed classes within the walls of one building. Nothing is more likely to generate an epidemic. The system of administering relief in workhouses should, on this ground alone, be reduced within the narrowest possible limits.

#### SICK-TIME.

A Bill, embodying a plan for enabling the labouring poor to provide support for themselves in sickness and old age, by small weekly savings from their wages, was introduced by Mr. Dowdeswell, and approved by the House of Commons, in 1773; but it met with the same fate as another Bill framed by the Commons in 1789, and founded on tables computed, at the request of a committee, by Dr. Price. The Lords rejected both Bills; and thus deprived the labouring poor of the guidance of a legislative Act in the formation of friendly societies for half a century. The tables of sickness, computed for the first Bill, were published by Baron Maseres in the second volume of his *Treatise on the Doctrine of Life Annuities*: Dr. Price's tables, which have till latterly been in general use, were published, in the edition of his work on Annuities, by Mr. Morgan. These tables were founded partly on observations and partly on an ingenious hypothesis: no extensive ob-

servations were ever made to determine the average time of incapacitation from labour produced by sickness, till the subject was taken up and investigated by the Highland Society (1824). Since then two committees of the House of Commons have sat on benefit societies, and the subject has obtained more attention.

Sickness, in practical statistics, is employed in a general sense. If we consider man as a material body, acting intelligently, anything in the condition of the body itself, which interrupts or impedes that action, is sickness. Any disturbance in the functions of the body, or alteration in the organs by which they are executed—from the skin to the brain and spinal marrow—from the time the food enters the mouth, till it exhales from the skin and lungs in vapour and gas—is a disease: and the sum of sick-time, produced by all diseases, constitutes the sickness of which statisticians speak. It is of various kinds. In acute or severe diseases, such as fever, inflammation of an important part, or malignant ulcer, a man is often able to think and move, just as he can digest a small quantity of food; but not with any energy, or at least with the energy required by an ordinary occupation. Any attempt at exertion aggravates and prolongs the sickness. This, we believe, is called *bedfast* sickness by the friendly societies. In other chronic diseases, slow inflammations of internal organs, reduced dislocations, rheumatisms, ulcerations, the patient can attend partially to his business: he is in possession of half his faculties; whether he can make them in any way available, depends on circumstances. This is walking sickness. The infirm, the crippled, the maimed, may either be entirely helpless and bedridden, or capable of some of the duties of life: their sickness differs from the bedfast, and from the walking, in being beyond the pale of recovery. The Highland Society calculated that of ten weeks' sickness, among persons of all ages under 70, two may be assumed as bedfast sickness, five as walking, and three as permanent.\*

The following table of sickness, from the *British Medical Almanac*, presents a comparative view of the mean proportion of sickness incidental to members of English and Scotch benefit societies; according to (1.) the observations of the Highland Society; (2.) returns obtained by Mr. Ansell, and published in his work by the Society for Promoting Useful Knowledge; and (3.) a table of Mr. Edmonds's, agreeing very nearly with Dr. Price's, at one time in general use:—

VIII.—Table showing the Proportion of Sick out of 100 living at each Interval of Age in Friendly Societies.

| Between<br>Ages, | Sick Time in 100 of Life Time.  |                                  |                                         | Between<br>Ages. | Sick Time in 100 of Life time.  |                                  |                                         |
|------------------|---------------------------------|----------------------------------|-----------------------------------------|------------------|---------------------------------|----------------------------------|-----------------------------------------|

| 20 to 30         | 1.14                            | 1.54                             | 1.72                                    | 70 to 80         | } 31.70 {                       | 32.50                            | ..                                      |
| 30 — 40          | 1.32                            | 1.82                             | 2.30                                    | 80 — 90          |                                 | 40.00                            | ..                                      |
| 40 — 50          | 1.97                            | 2.56                             | 3.10                                    | 90 — 95          |                                 | 67.00                            | ..                                      |
| 50 — 60          | 3.60                            | 4.32                             | 4.51                                    | All Ages         | 2.45                            | 2.76                             | ..                                      |
| 60 — 70          | 10.60                           | 11.26                            | 9.36                                    |                  |                                 |                                  |                                         |

\* Report of Friendly Societies, by a Committee of the Highland Society, p. 108.

These observations show, that, in the different circumstances, 1·32, 1·83, and 2·30 men in 100, between the ages of 30 and 40, were constantly ill: the sick-time increasing regularly with age. It is easy to deduce from this table the average days of sickness to each individual.

The Scotch and English observations represent, so far as limited numbers can, the sickness to which men, who are healthy at the time of entering benefit societies, are subsequently liable: the general proportion of sickness is higher. Tables of sickness for the entire population would be formed by taking 100,000 persons, of given ages, indiscriminately, and observing them for one, two, three, &c., years: they would, consequently, comprehend 4000 or 5000 individuals sick when the observation commenced, expressly excluded, by the rules of benefit societies, as well as those suffering from syphilitic diseases, and accidents incurred through drunkenness or brawls. In the parish of Methven, Perthshire, it was ascertained that 35 out of 743, or 4·7 per cent. of the male population above 15, would, from bodily or mental infirmity, not have been admitted as members of the friendly societies.\* Medical men are well aware that labourers often go about their work with diseases of the heart, tubercles in the lungs, and disorders of considerable severity. Dr. Forbes ascertained, by the personal examination of 120 Cornish miners, in actual employment, that only 63 had good health; of the remaining half, 26 had difficulty of breathing, 14 pain of chest, 10 pain of stomach and bowels, 5 lumbago, pain of shoulder, palpitation, scrofula, or fits.† Out of 115 children below 18 years of age, Dr. Bisset Hawkins states, that 84 had good health; 25 middling health; 6 bad health.‡ Of the miners at work only 53, of the factory children only 73 per cent. enjoyed good health.

How much sickness exists among the actual labourers of this country, independently of those definitively incapacitated by disease, and who are either discharged on this account or set aside as inefficient? For resolving this question, there are valuable materials in the *Supplementary Report* of the Factory Commissioners, of which we shall avail ourselves; regretting, at the same time, that, from several omissions, and the returns not being procured in proper forms, the information they afford is not so complete as it might easily have been rendered.

The first returns deserving notice relate to the workmen employed in Her Majesty's dock-yards, at Woolwich, Sheerness, Chatham, Portsmouth, Devonport, and Pembroke.

The following table from Portsmouth, made by Mr. Pennell, is the most complete, as it distinguishes the cases, and the duration of diseases, from the consequences of injuries incurred in the yards. It has likewise the advantage of exhibiting the liability to accidents and sickness among different classes of workmen.

| 3 years | 5,948                  | 2,250            | 1,011  | 27,410                                     | 15,590                          | 43,000                  |

This table furnishes, as the mean of the three years, the following interesting results. In the year, 1 man in 6 is seriously hurt; 2 in 5 fall ill. Each man, on an average, has an attack of illness, either spontaneous or caused by external injury, every 2 years: and, at an average, each disease lasts 14 days. In a tabular form the results will be more distinctly perceptible.

**XI. Annual Proportion of Attacks and Accidents occurring to 100 Men in the Portsmouth Dock-Yard: and the mean Duration of each Case.**

|                               | Number per Cent. | Duration of each Case in Days.   |
|-------------------------------|------------------|----------------------------------|
| Spontaneous attacks . . . . . | 37.8             | 12.2                             |
| Injuries . . . . .            | 16.0             | 15.6                             |
| Both . . . . .                | 53.8             | 13.2 mean duration of all cases. |

So far as the returns from the other dock-yards can be understood and admit of comparison, they confirm these results; and between Woolwich and Portsmouth, where hurts and sickness are distinguished, there is a remarkable coincidence in the time lost by sickness, although that from injuries is very different.

XII. *Table showing the Time lost by Sickness, whether induced by Accident or otherwise, among the Labourers in Portsmouth and Woolwich Dock-Yards.*

|              | Mean<br>Number of<br>Workmen. | Days Lost<br>by<br>Sickness. | Days Lost<br>by<br>Accidents. | Constantly<br>Sick,<br>per Cent. | Constantly<br>suffering<br>from<br>Accidents<br>per Cent. | Constantly Ill<br>from<br>both Causes,<br>per Cent. |
|--------------|-------------------------------|------------------------------|-------------------------------|----------------------------------|-----------------------------------------------------------|-----------------------------------------------------|
| Portsmouth . | 5,939                         | 27,410                       | 15,590                        | 1.26                             | 0.73                                                      | 1.99                                                |
| Woolwich .   | 2,243                         | 10,593                       | 8,594                         | 1.29                             | 1.05                                                      | 2.34                                                |

It may be safely assumed, that of the labourers employed in the dock-yards, 2 per cent. are constantly kept at home by diseases of one kind or another; and that diseases arising in the body itself, independent of external mechanical injury, constitute almost two-thirds of the entire sickness. No details or explanations accompany the original returns; they do not appear to have been demanded; but it may be presumed that the sickness only of the men who recovered, and returned to the dock-yards, is intended in the tables, and this, with the selection on entering, excludes the greater proportion of sickness prevailing in a population, although it expresses that experienced by the actually working class. The sickness of the working labourers in the East India Company's service was, we shall show, 1.65 per cent.; and this is little more than a fourth part of the entire sick-time experienced by the whole number employed, including those pensioned. This proportion would make the sick-time of the dock-yard labourers 7.8 per cent. of the lifetime.

A return of the state of health among the men employed by the East India Company in London deserves especial attention, as no observations so accurate or extensive have before been published, relative to the sickness and mortality among labourers in large cities. This return was obtained "in the form of a large volume, containing a list of 2,461 labourers, employed in the month of April, 1823, with a statement of the number of days' illness experienced by these labourers, one by one, year by year, for the 10 succeeding years; also the date of every death, and the date when any labourer ceased to be employed, by being superannuated and pensioned, dismissed, or by voluntarily leaving the service of the Company."\*

Every labourer put upon the sick list is allowed 1s. 6d. a day, Sundays included; he is also seen every day by the surgeon, and therefore remains no longer absent than the case requires.

During the 10 years, 496 died, 248 were pensioned, and 208 left the service, or were dismissed. The reporter, Dr. Mitchell, has calculated a table of the duration of sickness per annum for every age, from 16 to 81, which we subjoin:—

\* Factories Inquiry; Supplementary Report, by Dr. Mitchell, vol. i. p. 48.

| Age.     | Average Duration of Sickness per Annum for every Man employed. | Average Duration of Sickness for every Man sick. | Age.     | Average Duration of Sickness per Annum for every Man employed. | Average Duration of Sickness for every Man sick. |
|----------|----------------------------------------------------------------|--------------------------------------------------|----------|----------------------------------------------------------------|--------------------------------------------------|
|          | Days.                                                          | Days.                                            |          | Days.                                                          | Days.                                            |
| Under 21 | 4.02                                                           | 12.66                                            | 51 to 61 | 7.00                                                           | 22.60                                            |
| 21 to 31 | 4.94                                                           | 18.70                                            | 61 to 71 | 10.08                                                          | 29.07                                            |
| 31 to 41 | 5.06                                                           | 22.63                                            | 71 to 81 | 11.63                                                          | 31.77                                            |
| 41 to 51 | 5.31                                                           | 23.21                                            |          |                                                                |                                                  |

Dr. Mitchell has unfortunately withheld the *data* from which these results were derived. He has not stated the total days' sickness, and attacks at each age, nor arranged the observations so as to exhibit the complete years of life. But the report contains tables showing the number of the men at every year of age, from 16 to 78, in the beginning of April, 1823; the ages at which the 248 pensioners were put upon the list; and the ages at which the 496 men died whilst classed as workmen, as well as the ages at which 161 of the pensioners died. It appears that the deaths of the pensioners were obtained in a separate return, extending from April, 1823, to January, 1834, nine months over the ten years in which the other deaths happened. From these facts we first deduced the number living at each decennial period of life, on the supposition that the 2,461 individuals alive in 1823 remained in the service ten years; and thence subtracted the years of life lost by deaths and dismissals. Dr. Mitchell having omitted to state when or at what age the 208 men left the service, it has been assumed that the younger men left in rather greater proportion than the aged, but that all remained in the service five full years; which is the same as supposing the dismissals were equally distributed over the ten years. A similar correction was made for the deaths: 1-14th part was deducted from the deaths of pensioners for the nine additional months in which they were observed.

XIII. *Table showing the Number of Labourers in the East India Company's Service, April, 1823; and, from Ten Years' Observations, the Number living complete Years between 16 and 90 years of age; the Deaths among the Workmen and Pensioners; the resulting Mortality compared with the Mortality among Males in London and Stockholm.*

|       | 2,461                      | 24,610              | 20,343                           | 496         | 161            | 2.50                              | 10.6      | 10.5        | 2.13                       | ..                         | ..                         |

These observations are equivalent to observations on 20,343 men during one complete year, and between the ages of 30 and 70 are sufficiently extensive to furnish a near approximation to the mortality in four decennial periods: earlier or later they are of little separate value. The annual rate of mortality was 3.13 per cent.; and, notwithstanding

the selection, it agrees, between 40 and 60, very nearly with the general mortality of males in London (1813-30).

The mortality under 40 is not so high among the labourers, because the greater part of them are selected healthy men, received into the service between the age of 20 and 35; after 50 it is higher than the general mortality in London. These men were well supplied with food and clothing; their work, without being hard, insured regular muscular exercise; in sickness they had rest and proper medical attendance; yet, between 40 and 50, the mortality was 67 per cent.; between 50 and 60, as much as 82 per cent. higher than the mortality at the same ages in all England. Such facts as these annihilate the supposition that the increased mortality in cities is due to want of food, and greater misery; nor, although these men drank freely, can we admit that their moral habits differed so greatly from those of country labourers as to account for their greater mortality.

Of the 2,461 labourers, 10 per cent. were pensioned in the course of ten years; 8 per cent. were discharged, or quitted the service; 1 man in 81 working a year was pensioned; 1 in 4 had an attack of sickness; 1 in 60 was constantly on the sick list; 1 in 21 (4·79 per cent.) of the labourers was a pensioner; and 1 in 6 of the pensioners died annually. The mean duration of life, after being pensioned, would therefore be six years; five years and a half less than the mean duration of life among the general class of men in cities at the same ages.\* This, and the evidence of the medical attendant, Mr. Lewis Leese, prove clearly that the greater part of the pension-time must come under any comprehensive definition of sickness: the pensioners were declared by a special report of the surgeon, permanently disqualified for labour; and that not by age alone, for the majority were pensioned between the ages of 50 and 70, but by the mechanical injury of a limb, some infirmity, or a slow but fatal disease. Half the pension-time may therefore be safely viewed as sick time.

XIV. *Showing the Number of the East India Company's Labourers at several Periods of Age working a complete Year; the Number attacked by Sickness; the Days of Sickness experienced; the Pensioned; the Pensioners on the List One complete Year. Also the Proportion that annually fall sick, or are pensioned, out of 100 working; the Proportion Sick of the Class still on the Working List; the average Number of Labourers on the Pension List; the Proportion of the Living Disabled, and either on the Sick or Pension List.*

\* The expectation of life at the mean age when the 248 men were pensioned was 11·4 years, according to the city table of Mr. Edmonds.

† Obtained by multiplying the mean number working by the days of sickness

The proportion attacked by sickness out of 100 men, at each age, working one year, differed inconsiderably between 20 and 60: the number pensioned between 20 and 50 was also the same ('0022); from 6 to 11 per cent. of the workmen were placed on the pension-list between the ages of 60 and 90; of the actually working class the sick-time increased with age from 1·1 to 3·2 per cent.; the pensioners, at the ages 60–70, formed 24, at 70–80 more than 46 per cent. of the living. The total sick-time (including pension-time) increased up to 50, in geometrical progression, at the rate of nearly one-third every ten years; and if half the pension-time after 60 be counted as sickness, it rather more than doubled in the subsequent decennial periods. The rate of sickness, including all the pension-time under 50 years of age, is much higher than that found by the Highland Society: it lies between the rate assumed by Dr. Price and the observations by Ansell on the English benefit societies. (See tab. VIII.) There were rather more than two years of incapacitation for labour to each death. The deaths were to the sick and pension-time as 3·13 to 6·44.

Friendly societies, and companies who, like the East India Company, may deem it prudent to make their men subscribe to a sick and pension fund, will find these tables very valuable. They also throw great light upon the state of health prevailing in the metropolis: the mortality and other considerations show that these men, labouring in warehouses in the heart of the city, yet well provided for, occupy, as regards health, a middle point between the worst classes and the inhabitants of the cleaner and less crowded districts.\*

The comparative health of children in factories could be satisfactorily determined only by an enumeration of the living and sick in the manufacturing and other towns. The following tables, by Dr. Mitchell, are, however, not uninteresting. In reading them, it must be borne in mind that the fourth column does not represent, as stated, the "average duration of sickness per annum for every person em-

experienced by one person: this sickness is a fraction higher than that given by Dr. Mitchell, as the days opposite 21–31, &c., in his table were applied to the numbers 20–30, &c., in this. He has improperly compared the 9th instead of the last column with the sickness of the Highland Societies, which comprehended every kind of incapacitation for labour.

\* In addition to the statements in the report, we have ascertained from Mr. Lewis Leese, the intelligent surgeon, who, with his father and another surgeon, attended the East India Company's labourers, that they were selected chiefly between the ages of 25 and 35, when they became ineligible, or only obtained admission by special favour. To keep up a body of 1984 men, and compensate for the dying, the pensioned, and the discharged, 94 recruits were required every year; and from a book kept by Mr. Leese, who saw about three-fifths of the whole, it appears that he examined, during fifteen years, 1808–1822, 69 annually, about 7·5 per cent. of whom were rejected, chiefly for hernia and varicose veins. For various reasons the Company only took sound healthy men into their service. The diseases in the report were all of a severe nature: when influenza and cholera prevailed, 40 or 50 attended daily at the surgery for coughs and bowel complaints; but, as in other slight cases, they continued at work, were favoured by the *commodore*, and were not entered on the sick list. Venereal complaints were also excluded, as well as accidents from drinking, &c., when their cause was discovered. The old men gave up more readily than men between the ages of 30 and 50. Consumption and pulmonary complaints were very prevalent, so was fever, formerly. Consumptive patients remained on the sick list. Some of the men were Irish; the majority came from the country; the *alongshore* men were very liable to phthisis.

ployed;" for the operatives were generally examined at the end of the year, and from their statement of the sickness they had experienced in the preceding year, reported by their employers, this sick-time was deduced; a method which would exclude the sickness of all who had died, or been prevented by chronic diseases from resuming their labour. The "number employed" applies solely to the wages; only a certain proportion of them, not mentioned by Dr. Mitchell, furnished the average rate of sickness. Tables of sickness are given for 8 places; but the extent of observation in the other places was so small as to render the results quite irregular, and of no separate value. Through the omission of the number of observations, and of the other data, it is impossible to combine the facts together, so as to obtain a general result.\*

\* We need not urge the importance of furnishing the data, whatever they are, of calculations in statistical documents. The data are the essential part of a statistical report: the results, without these, are of no weight.

*Sicktime among Spinners and Piecers.*—Mr. John Shuttleworth, in 1833, investigated the health of the spinners and piecers employed during 1832, in the whole of the Manchester cotton mills, engaged in spinning fine numbers of yarn. Such mills require to be kept at a higher temperature than is necessary in spinning common numbers. They worked 69 hours a week, and employed 837 spinners, who were adults. The united ages of the 837 spinners were 27,367, giving on an average 32 years for each spinner. They had worked 23 years, on an average, in cotton mills, making in the aggregate 19,133 years. 255, or nearly 30 per cent. were *absent from work on account of sickness*, in the year 1832, an aggregate of 6,297 days, or 25 days for each of the 255 who were sick, and  $7\frac{1}{2}$  days (7·53 days) for the whole number of spinners employed. Of the 837 spinners, 621 reported themselves to have “good health;” 171 or 20 $\frac{1}{2}$  per cent. to have “*pretty good health*,” and 45 or 5 per cent. to have “indifferent health.” 681 of the spinners had wives living, 422 of whom were reported to enjoy “good health;” 151 or 22 per cent. to have “*pretty good health*,” and 108 or 16 per cent. to have “indifferent health.” 707 of the men had been married 11 years on an average (7907 years) to wives of the average age of 21 at marriage; 26 of the women died in the interval. The married spinners had had 3,166 children ( $4\frac{1}{2}$  to each marriage), of whom 1,922 were alive, and 1,244 (or 39 per cent.) dead. Mr. Shuttleworth’s statement evidently does not include the sickness of the spinners, who *died*, or were discharged on account of sickness in 1832. It will be seen in the annexed table, that the absence from work on account of sickness was least between the ages 26-41, when the men were married and rearing families.\*

*Sicktime among the Poor of parts of London.*—In 1839 or 1840 the Statistical Society of London inquired into the condition of the working classes resident within the parishes of St. Margaret and St. John, Westminster. 16,176 persons were included in the inquiry; and 277, or 1·71 per cent. were found to be “confined to their rooms by sickness.” In 1842, a somewhat similar inquiry was undertaken in the inner ward of St. George’s parish, Hanover Square. The population

\* Journal of the Statistical Society, vol. v., 1842, p. 268.

visited amounted to 5,945, of whom it is said 839, or 14·1 per cent. were ill. Omitting females, children, and old people, there were of—

|                                                    | Adult Males.  | Numbers Ill. | Proportion Sick,<br>per Cent. |
|----------------------------------------------------|---------------|--------------|-------------------------------|
| In Westminster . . . .                             | 4,898 . . . . | 75 . . . .   | 1·53                          |
| Inner Ward, St. George's<br>Hanover-square . . . . | 1,414 . . . . | 174 . . . .  | 12·31                         |

The sick in St. George's evidently included all who called themselves, or appeared unwell; the sick in Westminster were "confined to their beds," and would, if members, have been in the receipt of pay from a friendly society. The sick belonging to these families, out from home in workhouses and hospitals at the time, is, apparently, not included in the return.\*

*Sicktime in the Metropolitan Police Force*—This was embodied in the year 1830, and had subsisted 8 entire years at the end of the year 1838. The average strength of the force during the 8 years was 3,314, the numbers being very nearly stationary throughout the whole period. In order to maintain the average strength of 3,314 men, it was found necessary to recruit annually as many as 1,100 new members, the vacancies being created by 1,068, who are removed or retire from the force, and 32 who die every year. The average duration of the service of each policeman is, consequently, 3 years. The average at which the men enter, is 28½ years; about two-thirds enter between the ages of 20 to 31, and the remainder, with a very few exceptions, enter between the ages of 31 and 35 years. The annual mortality was ·97 per cent. or very nearly 1 per cent. The average number constantly sick during the 8 years was 2·81; or the days of sickness in a year to each man, were 10·3. For every annual death 2·90 were constantly sick, consequently there were nearly 3 years of sickness to every death. Out of 100 living, 3·78 were constantly sick in the month of January, and 2·38 in the month of July; the months of the year in which sickness was respectively at a maximum and minimum. The men are first chosen as being of sound and vigorous health, and the force is afterwards kept select by frequent discharges of men showing symptoms of impaired health or strength.

Each individual has to walk 20 miles every day in going his rounds, besides being obliged to attend charges at the police offices, the labour of which may be estimated as equal to walking 5 miles more, in all 25 miles a day. During two months out of every three, each police constable is on night duty, for nine hours each night, from 9 o'clock in the evening, till 6 in the morning.†

We have been favoured by the *Commissioners of Police for the Metropolis* with the following return in continuation of that communicated by them to the Committee of the Statistical Society. The return of the average force for each year is an additional column. Our calculations based upon this column differ in a little from those of the committee. Ours are we believe correct. It will be observed that in

\* Journal of the Statistical Society of London, vol. iii., April, 1840, p. 14; and vol. vi., Feb., 1843, p. 17. The latter is a paper drawn up by Mr. Weld.

† From a Report of a Committee of the Statistical Society of London.—*Stat. Journal*, vol. ii., part 4, 1839, p. 193.

the last 7 years the dismissals, the deaths, and the sicktime have been less—though the average force was 800 greater than in the preceding period.

*Return of the Sickness and Mortality in the Metropolitan Police.*

*Sicktime in Friendly Societies.*—We are indebted to Mr. Neison for a most important contribution to vital statistics, in the shape of an inquiry into the sickness and mortality experienced among the members of Friendly Societies. The data, published in detail by Mr. Neison, have been derived from two sources. One portion, relating to the Friendly Societies of England, was obtained through Mr. Tidd Pratt; and consists of the quinquennial returns for 1836-40, made under the Friendly Societies' Act, 10 Geo. IV., c. 56, s. 34, as amended by 4 and 5 Will. IV., c. 40, s. 6. The other portion was procured by Mr. Neison himself from the Friendly Societies of Scotland. The abstracts, made under his supervision, and at his own expense, have been liberally communicated to the public. They are the most extensive returns of the kind extant; and the results are of the greatest practical importance.

The returns of sickness and mortality are separately given for the rural, town, and city districts of England and Scotland. They will be found in a condensed form in the annexed tables.

The sickness returned in these tables is much higher than that given in the previous returns of the Highland Society, and of Mr. Ansell. Thus the amount of sickness experienced in the 30 years of age, from 20 to 50, is by the Highland Society's returns 22 weeks, Ansell's 31 weeks, Neison's 33 weeks; from the age of 30 to 60 it is 34 weeks, 45 weeks, and 52 weeks in the respective returns. From 20 to 60 the sickness does not differ materially from that previously given as experienced by the East India Company's labourers.

*Comparative View of the Sicktime in Mr. Neison's, and other Returns.*

| Ages. | Average Number constantly Sick to 100 living at each Age. |                       |                        |                       |                                 |

| 30-40 | 1.32                                                      | 1.83                  | 1.66                   | 1.91                  | 2.06                            |
| 40-50 | 1.97                                                      | 2.56                  | 2.44                   | 2.89                  | 2.69                            |
| 50-60 | 3.60                                                      | 4.32                  | 5.17                   | 5.21                  | 6.58                            |

It is proved beyond a doubt, that the sickness indicated by Mr. Neison's tables is now experienced in Friendly Societies; and in the Society of Odd Fellows, which comprised in the year 1844, nearly a quarter of a million of members. The Board of Directors, at Manchester, procured a return in 1845, of which Mr. Neison gives the following analysis:—

*Analysis of the Returns made to the Manchester Unity of Odd Fellows, for the Year 1844.*

| District.       | Average No. of Members during 1844. | Deaths of Members. | Deaths of Members' Wives. | No. of Weeks' Sickness. | No. of Members out of which |                         | Average Sickness Yearly to each Member expressed in Weeks. |
|-----------------|-------------------------------------|--------------------|---------------------------|-------------------------|-----------------------------|-------------------------|------------------------------------------------------------|
|                 |                                     |                    |                           |                         | One Member died.            | One Member's Wife died. |                                                            |
| Rural . . . . . | 66,208                              | 608                | 434                       | 57,795                  | 108.89                      | 152.55                  | 0.873                                                      |
| Town . . . . .  | 77,070                              | 700                | 554                       | 70,435                  | 110.10                      | 139.01                  | 0.913                                                      |
| City . . . . .  | 99,816                              | 978                | 662                       | 98,687                  | 102.09                      | 150.83                  | 0.968                                                      |
| Whole Unity .   | 243,126                             | 2,286              | 1,650                     | 226,917                 | 106.35                      | 147.34                  | 0.933                                                      |

In explanation of the above table, it may be stated that the rural district is composed of those places the population of which is under 5000, the town district of those places the population of which is 5000 and under 30,000, and the city district of such places as have a population of 30,000 and upwards.

During the year 1844, it will be seen that the mortality for the whole Unity was, as already stated, about 1 to every 106 members; while for the rural districts it was 1 in 109, for the town districts it was 1 in 110, and for the city districts it was 1 in 102. The average amount of sickness to each member is 6½ days.\*

The contributions in the Odd Fellows Society appear to be inadequate to secure a member the advantages which they promise for any length of time, under an economical management; and it would appear, that the expenses are at present extravagant. The income in 1844 was 325,200*l.*; the expenditure 241,604*l.*; the sum paid to sick members was 107,440*l.*; for funerals, district, and widow and orphans' funds, 62,743*l.*; and sundries 71,421*l.*! The average age of

\* Observations on Odd Fellow and Friendly Societies, by F. G. P. Neison, F.L.S., and Actuary to the Medical and Invalid Life Office.

the members is 32 years; and to secure 10*s.* a-week in sickness, 10*l.* at the death of a member, and 5*l.* at the death of a member's wife, the annual payment should, according to Mr. Neison's computation be 1*l.* 14*s.* 5*d.* The actual sum demanded according to the new scale, No. 1, is 1*l.* 2*s.* 9*d.* This is irrespective of 5*s.* or 6*s.* a-year in "Sundries" to each member. The premiums of those societies are not graduated according to age. Upon the whole they exhibit, amidst much good feeling, a want of knowledge, calculation, and foresight—which must involve the managers in discredit and the members in deep distress; unless an immediate and effective reform be carried out in all the lodges. The contributions must be raised and graduated, the expenses cut down to the narrowest limits.

In 1834 the number of members in the order was about 60,000, at the beginning of 1846 the number was 251,727. The entrance fees in 1844 amounted to 49,382*l.*, so that upwards of 40,000 members were initiated in the year; and as the increase of members was only 21,461 in that year, "upwards of 20,000," say the directors, "must have left the order after paying their initiation money and contributions for a length of time." This, although it neither denotes stability nor confidence in the order, is a large source of revenue; which may be taken into account in estimating the resources, and fixing the premiums.

Reverting to the tables of returns from other societies, it will be observed, that nearly one-third of the members are between the ages of 30 and 40; the greatest number appear to enter between the ages of 20 and 30; but new members come in at 30 and 40 and greater ages. The returns for England are from an average number of 229,449 members observed 5 years (1836–40), those for Scotland only from an average of 5,879 members for 12 years (1831–42). Nearly six-tenths of the English, and seven-tenths of the Scotch members belonged to "rural" societies; the remainder to societies in towns and cities. The mortality in all the societies was comparatively low; in the Scotch higher than in the English; and in the whole not higher than in Surrey; one of the healthiest English counties. The mortality under 30 in England and under 20 in Scotland, was somewhat higher in the rural than in the town societies; after those ages the mortality was considerably higher in the towns and cities than in the country; thus, in England, of 149,210 members of the age 40–50 only 1,378 died, while 1,520 members died in the town and city societies out of 107,286 members. The mortality in the country was .924, in the towns 1.417 per cent. annually. The mortality in Scotland at the same age, 40–50, was .997 per cent. in the rural, 2.097 in the city and town societies. The higher mortality in the towns, Mr. Neison appears disposed to ascribe to occupation, and the different "physical exercises" to which the several "classes of society" are "habituated."\* We cannot agree with him. That "physical exercise" and occupation have an effect on the mortality is admitted on all hands; but Mr. Neison should not have forgotten at the moment he was writing, that the excess of mortality in towns among children under 5 years of age, and among women

\* Con. to Vital Stat., pp. 109, 110.

is as great or greater than any he has discovered among the artisans and labourers belonging to Friendly Societies. From the age of 10 to 60 there were in England to every annual death from 2·3 to 2·7 members constantly on the sick fund. The mean of the 5 decennial periods is 2·5 years of sickness to every death; or in other words 2·5 members constantly sick to *one* death in a year. The ratio of the numbers receiving relief to a death is least at the age of 30-40; when the earnings of a man are greatest, and the calls on him from a dependent family are most urgent; at a period, therefore, when the *difference* between "wages" and "sick-pay," and his indisposition to forego this difference, are at a maximum. We have seen that many artisans are constantly at work while labouring under severe—to say nothing of slight illness; and it is evident, that the illness, lameness, or infirmity, which incapacitates a policeman from doing duty, or from walking 20 miles a-day, would scarcely prevent a tailor and weaver, from plying the needle and shuttle. Instead of inferring from the facts, as Mr. Neison appears disposed to do, that *sickness and mortality* are not connected together "as cause and effect;" we should lay it down as a principle, not true, but somewhat the less paradoxical of the two, that there is no connection between the time men of different trades in Friendly Societies are in the receipt of sick-pay, and the actual sickness which they experience. The variable extent to which equal degrees of sickness are likely to throw artisans of different trades on the sick fund, should be borne in mind, in advising societies, consisting of two or three prevailing professions. The mortality is greater, the sicktime less in the Scotch than in the English societies; we do not know whether this is connected in any way with the cholera, which was epidemic in the period over which Mr. Neison's Scotch returns, and not in that over which his English returns, extend. An epidemic like cholera, in which the cases are of short duration and fatal, would account for the anomaly in the Scotch returns, which are little more than four-tenths in extent of those returned by English Societies. At the age of 60 and 70, when the earnings are inconsiderable, and infirmities gain ground on the strength, there are *four or five* constantly on the sick and pension fund to 1 annual death; the whole of the illness experienced probably appears in the returns; and much that in earlier life would be shaken off, or not be called illness.

The members of Friendly Societies are selected men, and do not exhibit either the mortality or sickness of the classes from which they are taken. Yet we are inclined to think the mortality of the members still understated; and that like the sicktime, it will be found to increase with the successive returns. This may be put to the test by analysing the returns for the 5 years 1841-5; which are probably, in conformity with the Act of Parliament, now at the Home Office or the House of Commons. The numbers who enter and leave the Societies at each age should also be ascertained. This we hope to be furnished with by Mr. Neison; who is still prosecuting his inquiries, of which the following table of the duration of attacks of sickness is an interesting specimen.

## Sickness in Friendly Societies,

## ENGLAND.

*Sicktime in the English Army.*—The mortality of the English army is higher than the mortality of the general population; and the sickness, including every class of disease, is more than twice as great as that recorded in the preceding tables, at the ages 20-35, which correspond nearly with the ages of the troops. The mean proportion sick per cent. in Ireland (1797-1828), observed on an average force of 36,221 men, amounted to 5·1\* ; but a certain proportion of the sickness in the army is from syphilis, and this is said to be not included in the returns of Friendly Societies.†

From 25 monthly musters, Mr. Finlaison deduced the following rates of sickness in the two years 1823-4.‡

\* H. Marshall.—*Edinburgh Medical and Surgical Journal*.

† Among 44,611 soldiers quartered in the United Kingdom, 8,072 cases of venereal disease occurred in 7½ years; giving an annual ratio of 181 to 1,000. It has been estimated that the cases last on an average 6 weeks, which implies that 18 in 1,000 are constantly sick. Only 2 deaths were recorded. Of 13,081 men in the merchant service, treated in the Dreadnought Hospital Ship at Greenwich, 3,977 cases were surgical but not venereal; and 3,703, or 28 per cent., had venereal disease. The average stay in the hospital is 21 days. Of 5,327 out-patients at St. Bartholomew's Hospital, 2,513 had venereal disease; or nearly "half the surgical out-patients suffered from venereal disease at one of our largest and most liberal London hospitals, where letters were given to patients." Syphilis is fatal to the offspring of venereal patients. Thirty deaths of infants were referred, in London, to this cause in half of the year 1845; and 22 adults died of syphilis in the same period.—*A Paper by Mr. Acton.—Lancet*, 1846.

The sicktime in Madras, 1808-9, was 12.4 per cent. of the lifetime. Annesley considered 10 per cent. in that climate healthy; and this appears to be near the mean proportion of European troops, constantly sick in the East Indies. In places where the mortality is high, the rate of sickness fluctuates very much from year to year; and, exclusive of losses in battle, the mortality and sickness are tripled or quadrupled in a campaign. This kind of knowledge is still imperfect, although indispensable to those who would employ masses of men with effect in different circumstances.

The proportion constantly sick in the West Indies, 1817-36, are given in the subjoined table.\*

*Army Pensioners.*—In a former edition, the mismanagement of the Chelsea out-pensioners was animadverted on; and it gives us great pleasure to state that the pensioners are now (1846) paid by military officers, organised, and made a valuable subsidiary force. For this result, the country is, we believe, chiefly indebted to Lieut.-Colonel Tulloch.

Mr. Hume moved (June 26, 1846, No. 438,) for a return of the number of pensioners received from the army (including cavalry, infantry, guards, artillery, and engineers,) on the pension establishment during the 10 years 1838-43. And it appears from the return that, on an average, 2,090 were placed on the pension list annually; the highest number, 2,529, in 1838; the lowest, 1,794, in 1843. The average age of the men on admission was 40 years 4 months (40.34 years); and they had served 22 years 6 months (22.53 years); whence it follows that they must have entered the army under the age of 18, or at the age 17.81 years, if there be no error in the mode of stating the age. The total number of pensioners in 1836 was 86,495, and as 17,019 were placed on the list in the 8 years, 1836-43, about 26,822, or 3,603

\* The strength of the troops has been already given, under the head Mortality. As the strength is under-stated, the proportion of sicktime and the attacks of sickness should be increased about 10 per cent.

annually, must have died in the time; for the number in 1843 was reduced to 76,692. The mortality was 4.09 per cent., or 1 in 24 annually. The mortality among males in the general population of England, aged 40.3 and upwards, is about 3.80 per cent., or 1 in 26 annually; in Manchester it is 4.9 per cent. or 1 in 20. The deaths among the 76,692 pensioners in 1843 are given in the return; and amounted to 3,752, or 4.9 per cent. The average age of the 3,752 pensioners at the time of their decease was 59 years 2½ months. The average age at death of persons 40.3 and upwards, according to the Manchester Life Table, is 60.8 and upwards.

As the relative number of pensioners added to the list diminishes, the proportion of old pensioners and of deaths to the total number will increase. According to the English Life Table, 3,331 pensioners placed on the list every year at the age of 40 would have kept up the numbers (86,495) existing in 1836; and the 2,000 a-year pensioned now will ultimately form a body of 53,000, if their mortality do not exceed that of the general population; and 41,200, if their mortality is as great as that of Manchester.

The return on which we have commented is imperfect, and in several respects unsatisfactory: yet the subject is important; and we may hope that, ere long, the facts will be published in a scientific, useful form.

#### MORBILITY; ATTACKS OF SICKNESS.

The sickness to which mankind is liable does not occur at any one time or age, but in an interspersed manner over the lifetime of each person. The constant quantity of sickness is kept up by a succession of diseases attacking the body at intervals and in paroxysms, which, however irregular they appear in a limited sphere of observation, are really definite in number, and separated by stated spaces. As a certain order is preserved in the performances of the healthy functions, so their derangements, in similar circumstances, also observe an order and regularity of succession.

To accuse the human frame of perpetual malady is as ridiculous as to attribute, with some theological writers, unintermitting wickedness to the human heart; but if every alteration of the multiplied parts of the human body, every transient trouble of its infinite movements, every indigestion in man, and every fit of hysteria in woman, were reckoned, few days of human life would remain entirely clear; and, if the same scrutiny were extended to the state of the brain, the world may very civilly be sent to Anticyra—*naviget Anticyram*. In determining the quantity of sickness, and the attacks of disease, the slighter affections are therefore passed over; as, whatever difference there may be in the representation and expression, it is probable they bear a tolerably constant relation, in the same class of society, to the severer cases recognised, and directly diminishing production by putting a stop to labour.

Some cases of sickness then are so slight as to obtain no attention; for others, men consent to take physic; a third class incapacitates them for labour. In friendly societies medicine is taken in many

cases which never fall upon "the box," as the patients continue their employment. In the Liverpool Friendly Society this is clearly exemplified, where there were (1829-37) members equivalent to 23,364 living one year; and to 20,251 entitled to relief one year. The mortality of cases that fell upon the box was 3·7 per cent.; of the cases attended by the surgeons 2·4 per cent.: for only 40 applications for sick-pay were made annually by 32 out of 100 members, while 75 cases to every 100 members were attended by the surgeons; 28 at home, 47 at the surgeries. In the eight years, 3,254 members entered the society; 906 were expelled or withdrew; 408 died; 76·6 were constantly receiving sick-pay; 118 were on an average upon the surgeons' sick-list; 6,555 persons applied 9,493 times for relief from the funds; and the surgeons recorded 17,000 cases of sickness. Certain individuals scarcely sustained an attack; others had two, three, or four attack in the year. Some chronic cases were counted as distinct attacks every time they applied; and nearly all the returns of cases are somewhat exaggerated in this way. The annual rate of mortality was 1·75 per cent.; the proportion constantly on the box was 3·03 per cent. As the society is of recent origin, only 0·08 per cent. were on the Superannuation Fund; 4·04 were constantly under the surgeons' care. Each time of application the applicant remained upon an average 24 days on the box; and as several applicants fell upon the Sick Fund more than once in the year, there were 35 days of sick-pay to each distinct applicant.\*

The attacks of disease vary in frequency to a great extent in unhealthy and salubrious situations: but the experience of the East

\* Dr. Mitchell's Report. Data not given. Deduced from the Lancashire and Glasgow Factory Tables.

† Factories Inquiry, Supp. Report, part i. pp. 80-82. Appendix to evidence taken by Mr. Stuart; a return very judiciously drawn up by the manager, Mr. Smith.

‡ Dr. Bigsby on Dispensaries. The Burton-upon-Trent Self-supporting Dispensary included men, women, and children.

§ Annales d'Hygiène, p. 462. April, 1836. There were in this Maison Centrale 24 prisoners between 13 and 16 years of age. The rest were, probably, much older than the English prisoners; which, with the longer term of detention, will partly account for the high rate of mortality. The days of sickness amounted to 24,313; or 22·3 days each case. During this year cholera prevailed in Nîmes. In the 60 English prisons, the mean number of annual deaths in the four years 1830, 1831, 1833, 1834, was 101; in 1832, the year cholera prevailed, 162 died.

India Company's labourers, of the children belonging to the Bennet-street School, which has the best regulated sick society in Manchester, and of the artisans of the Trades' Club in Wurzburg, all receiving pay during sickness, and only falling on the funds in cases of some duration and severity, tends to show that 100 of the efficient male population of this country are not liable to more than 25 severe attacks of disease in the year. To each man there is a protracted disease, disabling him from work every four years: this forms one great section of the sickness of the country; but it does not include syphilis, accidents from fighting and drunkenness, or the many ailments which make men apply for medical advice, while they carry on their occupation, comprising, perhaps, as many more cases of a slighter character, which raise to 50 per cent. the proportion of the population attacked annually. In the Portsmouth dock-yard there were 38 attacks of sickness to 100 men: 16 per cent. met with accidents in the year. Besides accidents, the attacks of sickness in Sheerness amounted to 43·7 per cent. The reported attacks of sickness in Sheerness are exclusive of accidents; and if, as is probable, the same exclusion was made in the other returns, the spontaneous cases amounted to nearly 50 per cent. in Chatham and Pembroke. By excluding the slighter cases, the attacks of sickness may be reduced near the level of the preceding series: in the healthiest dock-yard, Plymouth, for example, out of 2,147 cases, 635 did not exceed three days in duration; and, by subtracting these, the proportion attacked in 100 will be reduced from 34·7 to 24·4. Accidents, although excepted here, ought not to be excluded, because they occur as common inevitable causes of disease among all classes of the people, and raise the sickness to a considerable, although varying, extent: in Portsmouth, the increase of cases from this cause was 42 per cent. Except Plymouth, the dock-yards appear to fall somewhat below the national standard of health; more than 50 in 100 of the men are attacked by sickness of one sort or other annually. In Sheerness, out of 1,422 diseases, 263 were agues, 142 rheumatisms, 68 colics and cholera.

The return from the Deanston cotton-works, in Scotland, after deducting cases of less than three days' duration, makes the annual attacks of sickness among males 20, among females 44·8 per cent. This difference between males and females deserves attention; it is produced by rheumatisms, diarrhoeas, and even wounds, but more particularly by catarrh and headach. The female cases approach the nearest to the total attacks; as the wages of women are lower, and they give over working abroad on slighter occasion than males. Almost an equal difference is visible in the Lancashire cotton-works; in Glasgow the difference is trifling. Females apply for medical advice more frequently than males; but as their mortality between 15 and 40 is but a little higher, the same must hold respecting severe illnesses. The cases observed in factories, only reported on the recollection of the workmen, would very likely include nearly all the serious diseases, and a varying proportion of the slighter distempers which detained them from work. Soon after 40 years of age individuals of the labouring classes begin to suffer from stomach complaints, the consequences of poor diet, poor clothing, exposure to weather, and anxiety; and from these complaints, in some shape or other, they seldom afterward become wholly

free. The attacks of sickness among paupers,—the feeble, crippled, maimed, idiotic, crazy, miserable, dirty, dissolute, vicious, unfortunate,—rejected as refuse from all the foregoing classes, are more numerous than the attacks to which select labourers are liable; and medical men, in undertaking to attend paupers, should bear this in recollection. For the facts relating to English prisoners we are indebted to an interesting paper by Mr. Chadwick, in which he collated the dietaries of 60 prisons in England and Wales. The average population in this table was assumed to be furnished by the numbers remaining at five times in each of the 60 prisons.

We are unacquainted with any data from which the absolute morbidity of the British population can be deduced, any more than the mean duration of each case, and the mortality of the sick, with which it is intimately connected. Several interesting observations on distinct classes, and on the morbidity and duration of sickness at different ages, however, exist. At the age of 20–50 the duration of each attack among the East India Company's labourers was 22·2 days, and, with the pension-time, 36 days: 7·8 in 100 cases died, or 7·4 exclusive of pensioners. The duration of these cases approaches very near the term of treatment in 14 Paris hospitals, where patients are admitted indiscriminately, and continue till they recover or die; in 1819–1825, the mean number, 3,947 patients, remained 35 days. In the hospitals of this country, where adults and more chronic cases are received, but at the same time are often sent out before death occurs, the patients continue longer under treatment: in the county hospitals (31) of Ireland, the patients remain 38·3 days; of England, 39·4 days; of the metropolis, 42 days.\*

Where slighter and ephemeral cases are counted, and organic diseases are excluded, the duration of cases among adults does not, according to the returns from the dock-yards, exceed 12 days. In Corfu, 1816–1821, the mean duration of all the diseases (14,098) was 16·1 days.

It is of great importance for medical men to know the average number of deaths in all the cases that come under their care, in order to judge of the remedial influence of medical appliances. The hospitals furnish some, although inadequate, information on this head. The sanability of the sick decreases in the large cities.

\* British Medical Almanack for 1836.

† Deaths rated higher in 1833–4. In the 80 years, 1752–1832, only 4·93 per cent. of the patients died.

‡ Factories Inquiry, Supp. p. 306. The other facts are from the British Medical Almanack.

These observations are in conformity with what is seen in other hospitals: the deaths among the patients in the London hospitals agree very nearly, when the time is the same (36 days), with the deaths among the London labourers (7.5 : 7.8), and the ratio of their ages is not very different. The deaths in 100 attacks were, among the Bennet-street scholars, 4.24; the Wurzburg artists, 3.33; the British troops in Corfu, 2.3; in Fort St. George, 2.7; in Bengal, 3.3; the native troops, Fort St. George, 2.6; while the deaths out of 100 living in these places were respectively 0.95, 0.76, 2.74, 4.8, 5.7, 1.4. The higher absolute mortality produced by external causes is due in part to the increased number of attacks, and in part to the greater fatality of the cases.\* In like manner the sick-time is augmented principally by the attacks, and but slightly by the cases lasting longer.

Men placed in the same circumstances appear equally liable to an attack of sickness between 11 and 60 years of age; 100 of the London labourers, in each of the decennial periods, 20-30, 30-40, 40-50, 50-60, had nearly 23.5 attacks of sickness annually; the highest number was 26.4, the lowest 22.4. A closer agreement could not, considering the extent of observation, and all accessory circumstances, be expected. A greater number of cases appear under 30, and as age advances; because, as Mr. Leese, when questioned, informed us, old and young men were placed on the sick-list for slighter ailments than men between 30 and 50; and this is confirmed by the fatality of the cases at these early and late ages not being proportionally great. The proportion of attacks (Table XIV. col. 7) was deduced from the men on the working list; it should have been calculated from all the men living,† including pensioners, and this would have raised the proportion of attacks after 40; for the proposition is, that 100 men aged 30 will suffer in the same circumstances as many attacks of disease as 100 men aged 50 or 60; and the 100 men embrace the sick, pensioned, or disabled, which become more numerous as age advances. Collected for another purpose, the Factories' Returns of sickness, notwithstanding the irregularity resulting necessarily from limited observations and defects which pervade equally the whole series, exhibited between 11-31 but inconsiderable oscillations in the number of attacks, whether among males or females. Out of the eight series of tables we select those founded on the greatest number of facts.‡

*The mean duration of each case increases as age advances.* So if we take in the pension-time under 60, inasmuch as the greater part of it legitimately appertained to the antecedent attack, the mean duration of each case among the East India Company's labourers was in the four decennial periods 20-60 respectively 22.5, 33.9, 47.7, 98.8 days. In all the Factory Returns, the duration of the cases increases in like manner, although, for obvious reasons, not so fast.

\* It must always be recollected that the army observations comprise every case treated; half of which, probably, would not throw a man on a sick pension fund; so, to compare them with the latter, the deaths should be divided by about half the cases. To obtain a rough approximation, therefore, multiply the above army deaths in 100 cases by two.

† The difference below 50 is trifling; the observation was imperfect, and could only have been calculated on the living by hypothesis.

‡ Deduced from Table XV.

*Attacks of Illness in each Quinquennial Period of Age, indicated by the Interval between each attack.*

| Ages. | Lancashire. |           | Glasgow.  |           |
|-------|-------------|-----------|-----------|-----------|
|       | Males.      | Females.  | Males.    | Females.  |
| 11—16 | 3·8 years   | 2·8 years | 2·6 years | 2·2 years |
| 16—21 | 2·7 „       | 2·5 „     | 3·1 „     | 2·4 „     |
| 21—26 | 3·7 „       | 2·4 „     | 2·2 „     | 2·3 „     |
| 26—31 | 3·2 „       | 2·1 „     | 2·3 „     | 2·4 „     |

*The mortality among the persons attacked, augments with age at the same rate as the mortality among the entire number living.* Out of 100 attacked in each of three decennial periods (Table II.), 20—50, the deaths were respectively 2·9, 6·5, 10·4; the deaths out of 100 labourers, whether sick or healthy, were, in the same periods, 0·82, 1·48, 2·43. The rate of increase was nearly the same.

This law is illustrated by the mortality of cases of smallpox at different ages.\*

| Ages . . .       | 0-3   | 5-10 | 10-15 | 15-20 | 20-30 | 30-40 | 40-50 | 50    | All Ages. |
|------------------|-------|------|-------|-------|-------|-------|-------|-------|-----------|
| Cases . . .      | 256   | 264  | 617   | 2,303 | 3,736 | 462   | 144   | 68    | 7,850     |
| Deaths . . .     | 105   | 64   | 118   | 562   | 1,273 | 215   | 84    | 54    | 2,475     |
| Deaths per Cent. | 41·97 | 24·2 | 19·1  | 24·4  | 34·07 | 46·54 | 58·33 | 79·41 | 31·53     |

*The sick-time increases with age in a geometrical progression* (see Tables VIII., IX., &c.) If, therefore, the number of attacks at each age be the same, the duration of each attack will increase in the same ratio; and conversely if the duration of the cases and the sick-time augment at the same rate, the number of attacks at every age will be equal. Any two of the elements being given, the third may always be deduced from them. Again, if the mortality of the attacked increase at the same rate as the mortality of the entire population, the proportion attacked at every age will be the same. Among the London labourers the mortality between 30—40, 40—50, was 1·48, 2·43, in 100 living; the mortality among 100 attacked was 6·5, 10·4. Now 1·48 is to 2·43 very nearly as 6·5 is to 10·4; and it results from this, that the attacks, whatever their absolute number may be, whether 22 or 52, were the same in both periods. The deaths below apply equally to the attacks and to the living: they apply, however high the absolute number of attacks be raised, provided it be raised to the same degree in both periods; but cease to apply if the number of attacks in each period be different.

| Ages. | Mean Number Living. | Annual Attacks. | Annual Deaths. |
|-------|---------------------|-----------------|----------------|
| 30—40 | 100                 | 22              | 1·48           |
| 40—50 | 100                 | 22              | 2·43           |

\* We took out these cases from the books of the London Smallpox Hospital for the years 1780—99 and 1828—36.—Brit. Med. Alm. 1838, p. 202.

We pass over several important applications of these facts to practical medicine, and to practical statistics, where, as in trigonometry, two of the elements of calculation can frequently be measured when the third is only attainable indirectly; expressing a hope, however, that they may be made available in the next census to throw much light upon the sanitary state of different classes of the population.

Mr. Edmonds first showed, from tables published by Dr. Southwood Smith, that the mortality of the fever patients in the London Fever Hospital, between 15-60, increased, every year, at a rate measured by a constant (1·03) discovered by him, and applied to the construction of tables of mortality; he also first announced, that if the mortality of all the patients increased in the same ratio, the number attacked at each age between 15 and 60 must be the same; and moreover, that as the amount of sick-time increases as the mortality, the duration of each case will increase in the same ratio.\*

The rate of mortality varies in the progress of cases to their termination. It has been found that the rate varies according to a mathematical law; describing a regular curve, which can be calculated: the results observed, and calculated, agreeing with great exactness. The law has been investigated in cholera and in smallpox.

*Cholera. Daily Rates of Mortality per Cent.*

| Days . . . .                  | 1     | 2     | 3    | 4   | 5   | 6   | 7   | 8   | 9   | 10  |
|-------------------------------|-------|-------|------|-----|-----|-----|-----|-----|-----|-----|
| Deaths . . . . .              | 2,096 | 1,412 | 563  | 297 | 229 | 209 | 144 | 112 | 78  | 63  |
| Deaths per Cent. (observed)   | 25·2  | 21·7  | 10·5 | 6·3 | 5·5 | 5·7 | 4·5 | 4·0 | 3·3 | 3·1 |
| Deaths per Cent. (calculated) | ..    | ..    | ..   | 6·3 | 5·6 | 5·0 | 4·4 | 4·0 | 3·5 | 3·1 |

The parallel has been carried, and holds, down to the twenty-fifth day. The mortality decreases 12 per cent. daily.

*Smallpox. Daily Rates of Mortality per Cent.*

| Days of the Disease . . .     | 15-20 | 20-25 | 25-30 | 30-35 | 35-40 | 40-45 |
|-------------------------------|-------|-------|-------|-------|-------|-------|
| Total Deaths . . . . .        | 552   | 153   | 70    | 39    | 23    | 14    |
| Deaths per Cent. (observed)   | 2·716 | ·848  | ·430  | ·279  | ·204  | ·161  |
| Deaths per Cent. (calculated) | 2·716 | ·848  | ·430  | ·278  | ·204  | ·158  |

The rates which regulate the progress of the mortality were deduced from 5,268 cases of smallpox and 9,372 cases of cholera.†

External circumstances have the greatest influence in augmenting the attacks of diseases; age and the internal state of the body determine their mortality and duration. When the people of this country

\* *Lancet*, vol. i. 1835-6, p. 855. The rate of sick-time rises among the London labourers at the rate indicated by the above constant (1·343 in 10 years); so, consequently, does the duration of the cases up to 50; when another constant takes its place, and the sickness is doubled (2·15 decennial constant from the age of 50) every 10 years. The mortality of the cases, and of the living, increases in a more rapid progression even than in the general population of London; this is due probably to the selection at 20-35.

† Paper by Mr. Farr, read at the Newcastle meeting of the British Association for the Advancement of Science.—*Lancet*, Report Med. Annual, 1838, 1839.

are placed amidst destructive agencies, these, like balls in battle, carry them off, by attacking a greater number; they also add to the fatality of the attack; but after a man is seized, age and vital tenacity, exclusively of medicine, are the great modifiers on which his life and sufferings depend. In epidemics the attacks generally become much more fatal at the same time that they are more numerous.

## DISEASES.

*"Mille mali species, mille salutis erunt."*

The diseases which constitute the sickness, and which disable, and carry off the people of this country, form the next section of this investigation. Man's body is compounded of many parts, performing many offices, so diversified in nature, that there is, perhaps, no extensive train of phenomena in the universe which does not find its counterpart in his organisation; crowned with other and higher faculties of sense and intellect, far removed from anything observed in inorganic matter. This complexity and completeness of the human body almost justified the ancient opinion "that man was microcosmus, an abstract or model of the world." For, dust and ashes as it is, who can survey the ruins of the human frame, the bare skeleton to which it is at last reduced, and in clothing it with muscle and tendon, artery and vein, delicate and incessant chemical action, forces adjusted for circulating fluids, and producing motion, sight, and all sense,—affection, passion, thought,—the history of all it may have done and suffered,—without feeling that a world wrecked in space—a planet in all its aberrations—offers a less interesting spectacle than the phenomena manifested by the human body in its progress to death!

With whatever precision the inquiries in which we have hitherto been engaged may measure the magnitude of the national loss by sickness, in seeking remedies a careful examination of the derangements and distempers to which the variable composition of man's body has made it accessible is required; for disease and death come not in one form or garb, nor can they be arrested in one way: "this subject of man's body," Lord Bacon justly observes, "is, of all other things in nature, most susceptible of remedy, but then that remedy is most susceptible of error."

The first and most important statistical division of diseases is into epidemics, which attack and often destroy in a short time great numbers of people; endemics, such as marsh fevers, confined to particular localities; and sporadic affections, occurring in an isolated manner, under the ordinary atmospherical influences.

*Epidemics.*

In a thinly-peopled uncultivated country, the indigenous plagues may be generally traced to marshes, to famines, or to the congregation of great multitudes in the same spot for superstitious or for warlike purposes. As civilisation dawns, cities are constructed; but they are at first rude inventions, where the supplies of air, water, and food are irregular, the narrow streets shut out the sun, and the dirt, the animal excretions, and decayed organic matter, are suffered to infect the air. In a high temperature, the effluvial atmosphere becomes a

deadly poison; and it is only as science advances, and the construction of cities is improved, that epidemics decline.

In England, before the Norman conquest, there were no large cities; the population was scattered over the country, then densely wooded, marshy, and partially tilled. Grain was cultivated; but swineherds and shepherds formed a considerable portion of the pastoral, rather than the agricultural Saxons. Bread and beer were made; but fish, particularly eels, and flesh, especially pork, fed on acorns, were comparatively more abundant. The meat was killed and salted at the beginning of winter to save fodder. Three-fourths of the population, at the time of the Conquest, were slaves. In such a state of society, with an imperfect cultivation of the soil and incessant intestine wars, neither capital nor the stock of provisions could accumulate. Famine, in the words of the Saxon chroniclers, scoured the hills. Several severe dearths are recorded in the chronicles; and pestilence followed in their train. Murrains were frequent. Fever and dysentery were epidemical. Besides the epidemics generated by bad crops, murrains, famine, and war, the plagues generated in the thronged cities of the Orient, devastated this kingdom. Fordun cites a Greek historian, to the effect, that a dire mortality prevailed, A. D. 669, all over Europe, and did not spare the remotest islands; namely, Great Britain and Ireland.\* In 664, a sudden pestilence (Man-cyalm), after depopulating the southern coasts of Britain, infested the province of the Northumbrians, and, raging for a long time in every direction, destroyed great multitudes.† This was probably the buboe plague, which became epidemic in Constantinople, A. D. 531; and in the course of the sixth century destroyed, according to Procopius, half the population of the Eastern empire. It reached Italy in the year 565, and spread through the circumjacent countries. In the chronicles of the age, we have met with notices of fatal famines and pestilences, A. D. 664, 669, 678, 759, 822, 897, 961, 976, 987, 1004, 1005, 1042, 1047. The catalogue is no doubt imperfect; for plagues, like heroes, have bad historians among barbarians. Hecker maintains that the smallpox reached France in the year 580, and cites some remarkable passages in proof of this, from Gregory of Tours.‡ The disease was called *Morbus dysentericus cum pusulis*; and it is not unlikely that smallpox formed more than one of the epidemics in England.§ It is related that Elfrida, Alfred's daughter, had this disease.

1066—1400. William the Conqueror broke down the remains of allodial freedom, and rigorously enforced the feudal system, as it was much better suited to the purposes of military subjugation. "Castles," says the Saxon chronicler, "he let men build, and miserably swink the poor." Three years after the Conquest, universal famine prevailed, and the wretched inhabitants ate dogs, cats, horses, and human flesh; some, to sustain a miserable life, sold themselves as slaves, while others fell down dead on the way to exile.|| Henry of Hunt-

ingdon laments, in his day, that "there was scarce any chief of the progeny of Engles in Engleland; but that all were reduced to slavery and sorrow." Concessions were slowly wrung from the Crown by artisans and traders, who obtained protection in towns; and so early as the thirteenth century made their voice heard in the national councils. Simon de Montfort summoned the Commons. Edward I. conceded that no tax should be laid without consulting Parliament. The cottiers endured greater hardships than the towns-people, and without any remedy, for they had no magistrates of their own caste. But many labourers were emancipated; and destructive epidemics, particularly the pestilence of 1348-9, by diminishing the labouring population, raised the rate of wages. A reaper could not be had for less than 8*d.*, a mower for less than 12*d.* a day, with food. Edward III. enacted that the labourers should demand no more than the usual wages; but the latter, haughty and obstinate, regarded not the King's command! Many were cast into prison; many ran into the woods: others, after having been sworn, in prison, not to take more than their usual wages, were liberated. Artisans in towns were treated in the same manner. The aristocracy ascribed the rebellion of 1381, under Richard II., to the "ease and riches of the common people;" but, as the latter were probably equally good judges of their own circumstances, it will be well to weigh their own description, preserved by Sir John Froissart. Assembled in thousands around their youthful king, they said:—"Whereby can they [the Norman nobles], say or shewe that they be better lords than we, vested with poor cloth [draps]. They have their wines, spices, and good bread; we have rye, and the drawings out of the chaff,—and drink water. They dwell in fair houses; and we have the pain and travail, rain and wind, in the fields. And by that that cometh of our labour, they keep and maintain their estates. We be called their bondmen, and without we do readily them service, we be beaten. The King asked, what will ye? We will that ye make us free for ever; ourself, our heirs, and our landes: and that we be called no more bond, nor so reputed.—Sirs, said the King, I am well disposed thereto."\*

In this state, when the people were depressed, and the resources of the country were dried up, or wasted in war, epidemics were frequent and fatal. The chroniclers record famines, murrains, and epidemics, A. D. 1069, 1070, 1073, 1086, 1087, 1093, 1096, 1103, 1111, 1112, 1124, 1125, 1126, 1162, 1175, 1176, 1183, 1189, 1196, 1203, 1221, 1224, 1252, 1257, 1258, 1259, 1271, 1289, 1294, 1295, 1315, 1316, 1318, 1341, 1348, 1349, 1355, 1361, 1362, 1369, 1379, 1390, 1391, 1392. A few examples will prove the severity of these visitations. In 1093, it is figuratively said, the quick could scarcely bury the dead.† 1124. A dearth prevailed; lifeless bodies lay everywhere unburied in the cities, villages, and cross roads.‡ 1196. The common people (*vulgus pauperum*) perished in every quarter for lack of food; and the fiercest pestilence followed, in the form of an *acute fever*, which destroyed

\* Berners' Trans. 1525, p. 202; collated with the French edition of Sauvages. Berners omits rye, *seigle*.

‡ Simeon Dunelm. Hist. p. 251.

such numbers, that scarcely any were left to minister to the sick. The customary funeral services ceased. In many places large ditches were made, into which the dead were thrown.\* 1257. The inundations of autumn destroyed the crops. This pestilential year gave birth to fatal fevers. In the summer, and principally the dog days, two thousand dead bodies were carried to the cemetery of St. Edmund's. 1258. Innumerable multitudes of poor people died of hunger. About the feast of the Trinity, the pestilence grew intolerable; 15,000 are said to have perished in London alone; and elsewhere, in England, thousands died. The *summa* of wheat rose at last to 15s., and higher: the rich only escaped death by purchasing foreign grain; the middle classes sold their possessions, and many of honourable degree were reduced to beg from strangers, or, restrained by shame, to pass the night in unnumbered sighs, hungry, pallid, dinnerless. These famines were attributed to the scarcity of money, produced by the exactions of the Pope and the King.† 1315. Provisions grew dear, and the Parliament attempted to fix the price; but the next year (1316) they grew still dearer. The quarter of wheat was sold for 30s. and 40s. Such a mortality, particularly of the poor, followed, that the living could scarcely bury the dead. A dysentery, generated by corrupted food, infested vast numbers, and reduced many to the last extremity. Horses, dogs, and even (it is alleged) young children were eaten.‡ The *Black Death*, which broke out at Southampton, August 1348, is reported, though there can be no doubt that the statement is a gross exaggeration, to have destroyed half the population. The *Black Death* had many symptoms which characterise plague: the stupor, the sleeplessness, the loss of speech, the black tongue, the unquenchable thirst, and the glandular swellings; putrid inflammation of the lungs, with intense pain in the chest, and bloody expectoration. The attack proved fatal in two or three days, sometimes in half a day. This epidemic began in the East.§ 1355. A peculiar kind of madness was epidemic; those affected, fled into the woods, and wandered about the fields. 1379. A plague broke out in the northern parts of the island. In this extremity, the Scots fell upon the country; and before making their incursions, prayed: "Gode, and St. Mango, St. Komayn, and St. Andrew, shield us this day fro Goddes grace, and the foule death that Englishmen dien upon."||

The havoc made by these desolating plagues, though exaggerated, must have been still very great. The poverty and want of accommodation, of all classes, propagated diseases with frightful rapidity.

1400—1700. As the labouring population, gradually recovering the losses sustained in sickness and the recurring epidemics, became numerous, the value of labour somewhat diminished; the servile toil of the bondmen was worth little more than their subsistence, and their long cries for enfranchisement were heard between the fourteenth and the seventeenth centuries. In an unpeopled country, where agricul-

ture and the arts are springing up, labour is dear ; the strong make the weak slaves, and obtain their labour for their maintenance ; but when slaves impatiently demand enfranchisement, and the lord of the soil, or the capitalist, can obtain better labour for less money in wages, than he must expend in keeping up a stock of serfs, why should he desire to keep the labourer in thralldom ? An English landlord would no longer undertake to maintain the population upon his estates, in exchange for their servile offices ; but a proprietor in Canada, or in New South Wales, would hesitate ere he rejected a similar offer ; and a proprietor in Demerara would gladly accept it. If the wages of certain labourers were relatively higher in the fourteenth than in the nineteenth century, are we, therefore, to conclude, that the mass of the population were in better circumstances ? Unquestionably not : there were free labourers ; their wages were high, and for that reason precisely the mass of the labouring population remained serfs. They were bondmen ; they received no direct wages ; they were dressed in canvas, and lived upon the poorest food that would keep them alive. Fortescue, in the time of Henry VI., talks, indeed, of the English people drinking no water, except on a religious score, of their feeding upon abundance of flesh and fish, and of their being clothed in good woollens. The Chancellor, in exile, had in his eye the middle and higher classes ; as fashionable physicians, ascribing all the diseases of mankind to luxury, understand only that part of mankind from whom they receive high fees ; or as in historians, we read of the liberties of the Roman and Greek people, when under the republics, the labouring classes, now emphatically called the people, were mostly slaves. It cannot be concealed, says Walsingham, in a grievous famine, that while the poor perished of hunger, the rich habitually indulged luxurious tables.

Caius, in his book upon the sweating sickness, bids his patient " not to go out fasting ; yet this is not so to be understood, that in the morninge, we shall streighte, as our clothes be on, stuffe our bellies as full as Englishmen, as the Frenchman saith, to our shame." Caius erroneously maintained, that the epidemic did not reach Scotland or Germany, and that abroad it only seized Englishmen : " Cause whereof none other there is naturell than the evil diet of these countries, which destroy more meates, and drenckes, without all order, convenient time, reason, or necessitie, than either Scotland or all other countries under the sunne." In another passage the writer says, " They which had this sweat sore with perill or death, were either *men of wealth, ease, and welfare*, or of the poorest sort, such as were idle persons, good ale-drinkers, and taverne-hunters. *The labourers and thin-dieted people* either had it not, because they eat but little to make the matter ; or with no great greffe and danger, because they laboured out much thereof."

Various edible vegetables and fruits were introduced in this age, as parts of the daily food ; ale was brewed with hops ; tea and coffee, and spices began to be used ; tobacco, notwithstanding the royal counter-blast, was smoked, and alcoholic drinks were distilled and drunk.

Until the reign of Elizabeth, no systematic attempt was made to

enumerate the deaths from plague, and from other diseases. The great men at the head of her government immediately perceived the importance of accurate information on this head; and the deaths in the plague year, 1563, were no longer left to conjecture, but counted, in the metropolis. They are thus given by the chronicler Holinshed:—

| Died in London.                            | Of the Plague. | Of other Diseases. | Total Deaths. |
|--------------------------------------------|----------------|--------------------|---------------|
| In the City and Liberties (108 parishes) . | 17,404         | 2,968              | 20,372        |
| In the 11 out-parishes . . . . .           | 2,732          | 586                | 3,288         |
| Total . . . . .                            | 20,136         | 3,554              | 23,660        |

The clergy had been commanded by Cromwell to register the burials, baptisms, and marriages; and in 1594 orders were issued by the Privy Council to the justices, enjoining them, wherever the plague was, to see that the minister of the church, and three or four substantial householders, appointed persons to view the bodies of all that died, before they were suffered to be buried, and to certify the minister or churchwarden of what *probable disease* each individual died. The minister or churchwarden was to make a *weekly* return of the numbers that were infected or died, also of all who died in their parishes, with the probable diseases of which they died, to the neighbouring justices. The returns, thus collected, were to be entered by the clerk of the peace in a book kept for the purpose; and the justices, assembled every three weeks, were to forward the results to the Lords of the Privy Council.\* This comprehensive scheme of registration gave rise to bills of mortality; of which several were commenced about this period. The London bills, which began in 1593, and have been preserved in an almost uninterrupted series, from the year 1603 down to the present period, will enable us to obtain a tolerably near approximation to the mortality produced by the buboe plagues of the seventeenth century.

The deaths recorded in London were as follows:—

| Years . . .              | 1593.  | 1603.  | 1625.  | 1636.  | 1665.  |
|--------------------------|--------|--------|--------|--------|--------|
| Died of Plague . . .     | 26,005 | 36,269 | 35,417 | 10,400 | 68,596 |
| Died of other Diseases . | 15,764 | 5,773  | 18,848 | 12,959 | 28,710 |
| Total Deaths .           | 41,769 | 42,042 | 54,265 | 23,359 | 97,306 |

Fresh parishes were gradually included in the bills of mortality; but assuming that the average population in the city and liberties of London was nearly 130,178†, the following table exhibits the rate of mortality in four plagues.

\* Orders thought meet by Her Majesty and her Privy Council to be executed throughout the counties of this realm, in such towns, villages, and other places, as are or may be hereafter infected with the plague, 1594.

† Vide note in subsequent page.

*Liberties of London within and without the Walls, 113 Parishes; the Population*  
130,178.

| Years.    | Deaths reported<br>of Plague. | Total Deaths. | Annual Deaths<br>per Cent. |
|-----------|-------------------------------|---------------|----------------------------|
| 1593      | 18,771                        | 31,891        | 24                         |
| 1625      | 26,260                        | 40,722        | 31                         |
| 1636      | 6,666                         | 16,905        | 13                         |
| 1665      | 38,775                        | 56,558        | 43                         |
| Total . . | 90,472                        | 146,076       | 28                         |

It is scarcely possible at this distance of time to conceive the desolation occasioned by these dreadful pestilences. Now the annual deaths in the metropolis, extending from Kensington to Greenwich, from Islington to Camberwell, do not exceed 50,000; and the mortality was not raised more than 30 per cent. in 1832, when Asiatic cholera excited so much terror. The deaths scarcely amounted to 65,000 in the year of epidemic cholera; if the same rate of mortality had prevailed, as in the plagues of the seventeenth century, the deaths in the metropolitan districts would have exceeded *half a million*! Perhaps, however, the population of the city may have been under-rated, and it is suspected that the deaths were over-rated; still, however, the mortality must have been enormous.

1700—1838. The plague has never visited London in an epidemic form since 1665. Fever, dysentery, influenza, smallpox, scarlatina, and measles, became the prevailing epidemics; and up to the middle of the eighteenth century one or other of them frequently cut off 8,000 or 10,000 lives in an outbreak. They maintained a high mortality; but no epidemic ever raised the annual mortality above 30 per cent. Influenza and other epidemics have scarcely failed to recur at intervals in all the towns of the kingdom, and will continue to recur so long as their causes exist; but, since 1665, no epidemic of so much importance has been observed as the cholera, which broke out at Sunderland, October 23, 1831, and reached London in the warm moist February of 1832. The London bills of mortality of that year ascribed 3,200 out of 28,605 deaths to the epidemic. The mortality in some foreign cities was ten times as great. The absence of plague from London has been ascribed by certain speculators to the enforcement of quarantine; the cholera demonstrated the inefficacy of the entire machinery of quarantine establishments, by crossing the cordons in every direction without any hesitation. It is time that this folly should be abandoned. Governments might shut out the four winds of heaven; but pestilence will laugh at their precautions, while they retain the elements of pestilence in the bosom of their populations. Every fact, with which science is acquainted, tends to prove, that if we cannot exclude this subtle fire from our habitations, we can, to a certain extent, render them pestilence proof. A prosperous nation, whether scattered over a cultivated soil, or concentrated in well-constructed cities, has little to dread from the importation of cholera, plague, or yellow fever. In unhealthy places, the exclusion of one form of dis-

ease is of little advantage; for other priests minister at the altars in its stead, and sacrifice the victims.

It has been remarked, that the chasm created by epidemics is speedily filled up; and that where the ordinary mortality is high, the reproductive power is exalted in the same ratio. This is, however, a poor compensation. The epidemic cholera destroyed 18,000 persons in Paris; excluding immigration for a moment, let it be admitted, which however is not the case, that in two years the births were in excess to the same extent: the population would be actually the same in numbers; but the 18,000 new members are helpless infants, and must be fed by their parents or the state for many years; while of the 18,000 destroyed by cholera, 10,953 were in the prime of life, between the ages of 15 and 60 years.

Other articles of this work exhibit the present state of the empire. In them will be found described the economical and political ameliorations which have led to the mitigation of famine, and the decline of pestilence. We have not space to follow them step by step from the 17th to the 19th century; and shall only refer to one point—the coincidence between the advancement of medical science and the improvement of the public health. Medical science was almost unknown down to the reign of Henry VIII. In the 16th century, Linacre, Caius, and other eminent scholars, translated several works from the Greek; in the 17th century anatomy was ardently prosecuted, and the discovery of the circulation of the blood, by Harvey, led to other discoveries, which threw a new light, not only upon the processes of human life, but upon the agencies by which they are disturbed or arrested. Bathurst, Henslow, Hook, Mayow, and Boyle explained the nature of respiration to a certain extent; and directed attention to the vital influence of the atmosphere. With Priestley, and modern chemistry, a fresh flood of light broke in upon the subject. Sydenham and Wiseman founded a practical, experimental school of physic; new remedial agents were discovered; and towards the close of the 17th century, the mass of the population began to be attended by men who had some acquaintance with the principles of the art of healing. The excessive mortality in cities was registered; the public became aware of the causes of disease; and imperfect, but, as the event proved, not entirely ineffectual measures were taken for their gradual removal.

In this sketch we have met with nothing to substantiate the dreams of those writers who fancy that savage life, privation, and ignorance conduce to health. It is in the future, not in the past, that we look to see man attain physical perfection, exercise the faculties of his nature 70 years, live free from the pangs of disease and the terrors of pestilence, and descend at last into the grave in company with the friends of his youth.

#### *Endemics.*

The medical topography of England is yet imperfect; but the Provincial Medical Association is now diligently prosecuting this important part of medical inquiry, to which their attention was specially directed in an able paper by Dr. Conolly. The last volumes of the Transactions contain some good topographical articles; that of Dr. Forbes, on the

Land's End, to which we shall again have occasion to refer, is distinguished for the comprehensiveness, candour, and good sense with which it is drawn up. From the volumes of the association before us, and other sources of information, it does not appear that at present any special endemic prevails in England. Agues are frequent in the marshy districts of the low eastern coast, in Lincoln, in Essex, in Kent, in Cambridgeshire. The mortality of the latter county, in which the agricultural is 61 per cent. of the total population, rises very high; the marshy Isle of Ely making it one of the most unhealthy counties in England. The mortality does not fall particularly on infancy, as M. Villermé inferred from Mr. Rickman's tables of mortality. The mortality at several intervals of age, calculated from the numbers living and the deaths in the marshy and other counties, may be seen in the table previously given.

Wen, *Derbyshire neck*, or bronchocele, exists all over England to a greater or less extent. It is not frequent, except in some of the close valleys, surrounded by hills: from its having been common in Derbyshire, the *Derbyshire neck* designates the peculiar disease in this country. Besides the thyroid gland, this affection involves the brain and the organs of the senses; in the Valais, and both sides the Alps, bands of idiotic Cretins are seen, who almost form a distinct variety in our race. The disease has rarely been carried to this extent in England; and, in iodine, medical men have now an almost unfailing remedy for the early stages of bronchocele, as well as for scrofula.

#### *Sporadic Diseases.*

Sporadic diseases are the great class of isolated disorders, attacking, not by sudden outbreaks, but regularly and constantly, a certain proportion of the living. Inflammation of the lungs, consumption, apoplexy, cataract, are examples. No definite line separates them from epidemics and endemics. To discover their relative frequency, and the share each particular malady has in the sum of constant sickness, it is not enough to resort to the bills of mortality; for these only record fatal diseases, taking no notice of the slighter affections, which partially or entirely render a man unequal to his duties: besides, the proportion of deaths from two kinds of disease is rarely, if ever, the same as the relative frequency of the attacks. The deaths induced by consumption, by inflammation of the lungs, and by measles, furnish but indirectly an index to the numbers attacked by these maladies.

The following observations show that the rate of mortality induced by different diseases has an extensive range:—

|                           | Cases.  | Deaths. | Deaths per Cent. |
|---------------------------|---------|---------|------------------|
| Cholera (Galicia, 1831) . | 255,774 | 96,061  | 37.6             |
| Fever . . . . .           | 1,273   | 143     | 11.2             |
| Dysentery . . . . .       | 3,961   | 418     | 10.6             |
| Small-pox . . . . .       | 14,804  | 1,588   | 10.7             |
| Scarlet Fever . . . . .   | 2,422   | 211     | 8.7              |
| Whooping Cough . . . . .  | 8,007   | 533     | 6.7              |
| Measles . . . . .         | 14,051  | 327     | 2.3              |

Again, in estimating the prevalence of disease, two things must be

distinctly considered; the relative frequency of their attacks, and the relative proportion of sick-time they produce. The first may be determined at once, by a comparison of the number of attacks with the numbers living; the second, by enumerating several times the living and the actually sick of each disease, and thence deducing the mean proportion suffering constantly. Time is here taken into account: and the sick-time, if the attacks of two diseases be equal, will vary as their duration varies, and whatever the number of attacks may be, multiplying them by the mean duration of each disease will give the sick-time.

In Paris the mean duration of fatal cases of cholera was 2 days, 13 hours, and 8 minutes; 18,400 cases occurred which ended in death; probably an equal number recovered after being ill a week: the entire sick-time induced by cholera was, therefore, about 158,118 days, which, divided by the population (774,338), gives less than 5 hours' sickness for each person. The cholera sickness amounted through the year to no more than .00056 constantly sick. This distinction is of vast importance; for the constantly sick, contributing nothing to their own subsistence, and requiring the care of others, bear with a heavy weight on the community; and when the diseases are chronic, only prolonged pains and gloomy prospects brood over the sufferers. For this reason, where the conditions of existence are unfavourable, and a great proportion of the people are weak, sickly, and doomed to untimely death, a sudden epidemic cuts short their agonies, and purifies the race: it is an amputation of members already gangrened, and falling off by inches; at the same time, however, it carries off a great number of the healthy. If those who had cholera in Paris had been seized by consumption, they would have endured 73,600 years of sickness instead of 158,118 days: the living in the epidemics of the middle ages could not have watched the sick if their diseases had been protracted. In this sense only, epidemics can be looked upon as merciful visitations of Providence, for moderating evils self-inflicted on mankind. The comparative prevalence of disease, of which medical men speak in their writings, seems to involve a compound notion, including the attacks and their duration. As there are few statistical data for determining the relative prevalence of each form of disease, we have only some general remarks to offer.

*Insanity* has been said to be on the increase in this country. Dr. Powell, secretary to the Commissioners for licensing madhouses, showed that the number of lunatics confined in private asylums in England augmented in eight quinquennial periods (1775—1814) from 1,783 to 3,647; and thence deduced the above inference. Willan, Bateman, and Burrows, held an opposite opinion. Notwithstanding the returns made to the House of Commons, the data necessary to determine the prevalence of insanity are yet imperfect.

In 1833 there were 399 lunatics confined under the Crown; the nett incomes of 351 amounted to 269,158*l.*; the incomes of 48 had not been ascertained. The average annual income of each lunatic in the care of the Lord Keeper was 767*l.* In 1830 there were 108 licensed houses for lunatics in England and Wales; 38 in the metropolitan, 70

in the country districts; 2,343 patients in the former, 2,153 in the latter.

*Pauper Lunatics and Idiots in England and Wales, from a Return made to the House of Commons, 1836.*—Confined in asylums built under provisions of the 9 Geo. IV., c. 40:—Lunatics, males 1,260; females 1,350: idiots, males 90; females 80.—Confined in private lunatic asylums: lunatics, males 659; females 744: idiots, males 35; females 53.—Under the care of parish officers:—lunatics, males 915; females 1,474: idiots, males 3,247; females 3,760.—Total lunatics 6,402; idiots 7,265; lunatics and idiots 13,667. Of paupers alone there was 1 person of unsound mind to 1,024 of the population.

In 436 Unions there were 5,259 idiots (2,602 from birth); and 3,841 lunatics, of whom 2,601 were deemed incurable. Of 100, 58 were idiots (29 from birth); 42 lunatics, of whom 29 were considered curable, 13 incurable.

The average proportion of cures in asylums is 40 per cent.; the mortality 26 out of 100 cases; the deaths per cent. per annum 9·0. The average charge of the pauper lunatics in the county asylums is 7s. a-week. The Government pays 15s. 4d. a-week for 75 criminal lunatics at Bethlem!\*

The insane, according to Sir A. Halliday, are more numerous in agricultural than in manufacturing districts; they are also more numerous in Scotland than in England.

|                                     | Population. | Insane. | Proportion. |
|-------------------------------------|-------------|---------|-------------|
| 12 Agricultural Counties . . . . .  | 2,012,979   | 2,586   | 1 to 820    |
| 12 Manufacturing or Mining Counties | 4,493,194   | 3,910   | 1 — 1,200   |

Do these returns prove that the tendency to insanity is greatest in agricultural districts? We do not think they do. It is doubtful whether the greater proportion of idiots, indicated by the returns, proves that proportionally more idiots are *born* in the country, in Wales, or in Scotland, than in London. The number of idiots living at any one time depends on the duration of their life, as well as on the proportion born; if the Welsh idiots lived twice as long as the idiots born in London, twice as many would enter into Sir A. Halliday's enumeration, although the tendency to idiocy was the same in both places. In Wales, and remote villages, the idiot lodges in a cottage, and, supported by the parish, is the qualified butt, and of course the favourite, of the neighbourhood: in towns he would have more difficulty to survive the nursing in a workhouse. An idiot, Jack of Pool, in Montgomeryshire, lately died, aged 109: he lived near the residence of old Parr, and was clothed by a neighbouring lord, who secured his vote at every election. If we exclude congenital idiots, and only calculate the proportions insane, it is likely that the tendency to madness would be found greater in towns than in the country,—in England than in Wales and Scotland. If lunatics in this and other countries be now better treated than formerly,—and this is incon-

\* Statistics of English Lunatic Asylums. Sherwood.

testibly the case,—their life is necessarily prolonged; and the proportion to the population increased, although the tendency to insanity may be diminished. The horrible dens in which lunatics were formerly lodged must have greatly diminished their numbers. The number of lunatics, members of the Society of Friends, in the Retreat, near York, has been of late years 64; the mean annual admissions 1812–33 were 15·2;\* and the Quakers in England do not exceed 23,000: consequently out of 10,000 of that body, 7 become insane every year, and 28 are constantly in the asylum. But as it appears, from the report of Mr. Tuke, that more than 6 months elapse after the attack before the patient enters the asylum, while 14 per cent. quit the Retreat unrelieved, at least 6 more lunatics out of the asylum must be added to the 28 confined; which will make the insane amongst the Quakers 3·4 per 1000. Is not this a nearer approximation to the insane among the richer classes in England than the calculation of Sir A. Halliday, founded on imperfect parliamentary returns?

*Consumption* is a disease in which the lungs are principally affected: it begins with a change in the constitution, followed by the deposit of a cheese-like matter, forming tubercles in the lungs, and other parts, ending in ulceration: when this tuberculous matter is deposited in the glands of the neck, and in the bones and joints, it constitutes *scrofula*; in the glands of the abdomen, *mesenteric disease*; neither of which affections differs from consumption in its essential anatomical cause. Foreign writers appear to think this disease more prevalent in England than on the Continent; a prejudice probably derived from statistical reports ill understood. Dr. Young and Dr. Woolcombe calculated, from the bills of mortality, that in England and Ireland consumption causes one-fourth part of the deaths. Sir James Clark believes that, after deducting the deaths in early infancy, a third part of the mortality in this country arises from tuberculous diseases. It is the opinion of this eminent physician, whose opportunities of observation have been very extensive, that consumption and *scrofula* are stationary among the labouring classes of the country. "But," he adds, "whether tuberculous diseases have diminished or not during the last century among the labouring part of our population, I am of opinion that they have increased in the middle and upper ranks."† The number of children reared has doubled within the last century, and the mortality between 20 and 30 appears on the increase; so that, unless the hygienic precautions, very ably enforced by Sir James Clark, be followed, it is not improbable that an increase of weakly bodies and of consumption may be observed.

*Stone*.—Mr. Smith of Bristol, and Dr. Yellowly, have bestowed great pains in forming a statistical account of calculous diseases. According to the estimate of Dr. Yellowly, 111 persons are cut every year in England and Wales for stone in the bladder: of these, 15½

\* A Treatise on Insanity, by J. C. Pritchard, p. 145. A few of the lunatics admitted at the Retreat were apparently not Quakers; but these would not compensate for cases of a mild character never sent to the asylum. See also pp. 198–201, and pp. 328–351.

† A Treatise on Pulmonary Consumption, by Sir J. Clark, M.D., F.R.S., p. 10.

cases occur among the inhabitants of Norfolk and Suffolk, and 31 in London. This will be seen, and the proportion to the population, in the following table\* :—

| PLACE.                                                       | Number of Stone Cases | Cases per Annum. | Comparative Frequency. |

The *venereal disease* has diminished in intensity, if not in the frequency of its onsets; it is now, certainly, never communicated by the breath, as it is reported to have been in the fifteenth century. A mild treatment suffices to effect the cure of its common forms, and mercury is no longer employed to an enormous and noxious extent. Syphilis was at first confounded with leprosy; and its virulent eruptions on the skin, aggravated, like other skin diseases, by the filth and vitiated health of the people at the time it became exceedingly prevalent, have subsided into milder forms. The skin diseases, designated leprosy in the middle ages, for the reception (not the cure) of which so many hospitals were erected, survive in the itch, and a few, but not very malignant, eruptions. An able writer in the *British and Foreign Medical Review*† says, “Herpes zoster (shingles) is seldom, in truth, here thought of any importance, although the details of many continental authors abound with descriptions which plainly connect it with formidable constitutional disease. The same, and perhaps a greater degree of violence of character, will be found to prevail in cases of herpes in unhealthy localities, where the people are miserably fed and hardly worked. We see in the description of Alibert, and the author before us, as well as in many others, accounts of almost all diseases of the skin so widely different from any which are observed in the British Islands, that we doubt and occasionally deny their identity.” The common acne of the chin, on a part covered with hair, becomes a frightful disease in France. Among the better classes of society in England, if we except lepra, impetigo is more frequently seen than any other skin disease. Scald head and itch are more frequent among the dirty children of paupers.‡

\* Remarks on the Tendency to Calculous Disorders, by J. Yellowly, M.D. The subject is difficult; but it has been skilfully handled by Mr. Smith and Dr. Yellowly, and every effort made to obtain the numbers occurring in each particular locality.—Trans. of Royal Society, 1829, p. 1, 55.

*Fatal Diseases, and the Causes of Death.*

Violent death takes place in a thousand forms: but it may generally be referred to obstructed respiration, as in hanging, drowning, suffocation; to loss of blood, as in severe wounds, hæmorrhage, rupture of vessels; to destruction of structure, and a shock, as in falls, blows on the head or spinal marrow, contusions, gunshot wounds; and to devitalisation, if the word may be used, by prussic acid, mental emotion, lightning. Death in its most common form is the effect of disease in the brain and spinal marrow, the blood, the lungs, the heart and blood-vessels, the bowels. Fever, inflammation, and various morbid products, infect the whole system, and prove fatal sometimes by the mechanical injury they do, but more frequently by an alteration of the chemical, physical, and vital processes. Persons die of inflammation in the stomach before its structure is disorganised: fever is at times fatal without producing any essential lesion of a vital part: cholera, plague, and other epidemics, extinguish existence as rapidly as poison.

In presenting a tabular view of fatal diseases, it is desirable on many accounts to arrange them in groups, related as regards their locality, and their essential forms or phenomena. To examine them in these two points of view, we have classified the several observations (1.) according to the organs or systems of organs implicated; and (2.) according to the special nature of the disease. But with the London bills of mortality a different arrangement has been pursued: without following any classification, we have placed infantile diseases, eruptive fevers, plague and fevers, diseases of the bowels, and diseases most resembling each other in their essential phenomena, in the same group. This was necessary, as the nomenclature necessarily varied in the course of two centuries, and the same disease passed under another title. The names of diseases, although derived generally from some very striking feature in the case, are not unfrequently vague and obsolete, so that it is only

\* Statistical Report of the Sickness, &amp;c., among the Troops, 1838.

by a careful study of the contemporary writers that any hope of interpreting them can be entertained.

Col. A. in the annexed table is deduced from 65,706 observations made in the 7 years, 1629-1635, the first published: col. B. from 426,253 diseases recorded in the 20 years, 1660-1679, a period made the subject of Sydenham's immortal works: col. C. from 732,873 deaths occurring in the 30 years, 1728-1757; cols. D. and E. are in great part from Mr. Milne's work on Annuities: col. F. presents the results of the five last bills (1831-5), and the actual fatal diseases of London, so far as they are exhibited by the late system of returns by parish clerks. It is calculated on 118,895, the total deaths, exclusive of the still-born.

*Table of the Fatal Diseases of London for the last Two Centuries; showing, in 1,000 Deaths, the Proportion by each particular Disease.\**

\* Column C was calculated by Mr. Cortyn Morris: it includes, as well as column B, the still-born; to compare these columns, therefore, strictly with columns A, D, E, F., from which the still-born were excluded, the items of column B must be raised 1-66th, of column C 1-100th. Column E is from Mr. Milne's work on Annuities; who, it will be perceived, did not calculate the minor items.

† Perhaps cough and cold should come in this place.

‡ Under "Various."

Some of the terms in this table require explanation. The mold-shot head, or horse-shoe head, was a chronic form of water on the brain (hydrocephalus); but, under the name of dropsy or sometimes inflammation on the brain, the acute stage of this disease, before deformity supervenes, is now registered. It is really inflammation of the brain in scrofulous children. Livergrown was applied to the swelling of the abdomen, the liver, and spleen, occurring in children after intermittents.\* Rickets, a form of scrofula, is now exceedingly rare. Sydenham acutely remarks, that the true rickets rarely happen, except in those years when autumnal intermittents prevail: † livergrown and rickets, apparently confounded at first, disappeared from the bills with the reign of intermittent fevers. Croup and hooping-cough are increasing rapidly, if they were not formerly mixed up with convulsions, which took the place of the chrisomes, in expressing the undefined diseases of infancy. The common diseases of childhood are irritation of the mucous membranes, inflammation, and scrofula.‡ Tubercles are rare in the first year; between the fourth and the ninth year of age, M. Papavoine found tubercles in 70 per cent. of the children that

died in the Hôpital des Enfants Malades in Paris. They were, doubtless equally frequent in London.

*Scarlet fever* was at first confounded with measles; it was joined, in 1731, with fever, and only made a separate item in 1831. Griping, twisting of the guts, bloody flux, and plague in the guts, were the homely Saxon synonyms of dysentery. *Surfeit*, with respect to its symptoms, resembled *cholera morbus*, which, raging epidemically in August, was attributed by the vulgar to eating too much fruit. Stopping of the stomach is the iliac or coeliac passion, "which," says Sydenham, "deserves to be enumerated among the symptoms consequent upon fevers." Its great frequency (1629-79) was probably owing to contraction of the bowel after fever and dysentery. No commentator on the bills of mortality has been able to explain the great mortality attributed to *rising of the lights*; Sydenham, however, solves the question, in treating of this distemper under hysteria, which, as it simulates, was confounded in females with almost every other disease. Diseases of childbed, often accompanied with hysterical symptoms, were evidently reported under this title.\*

The preceding table, founded on the deaths, only indicates the relative mortality produced by different classes of disease. The following table expresses the liability of the living to death by all the great classes of diseases during six periods of the last two centuries. The first and most difficult step here was to determine the absolute rate of mortality in the six periods. The population in the liberties of London, enumerated in 1631, was 130,178; the deaths in the liberties during the eight years, 1628-35, were 54,299, of which 1-24th were still-born: excluding these, the annual mortality was 5 per cent. This represents the mortality of years free from pestilence, but not the absolute mortality of the period, which, for the 24 years, 1620-43, was 7 per cent. Column A. shows, therefore, the fatality of diseases in years intercurrent between epidemic years. Column B. is an approximation to the mortality and diseases of London in the middle ages, although it includes 14 years subsequent to the great fire, and to the last epidemic.† The mortality of London in the 17th century did not

\* Sydenham's Works, vol. ii. pp. 103-114.

† The enumeration of 1631 was published by Graunt, in the Appendix to his Observations, under the title "Anno 1631, ann. 7 Caroli I.: The Number of Men, Women, and Children, in the several Wards of London, and Liberties, taken in August, 1631, by special Command from the Right Honourable the Lords of his Majesty's Privy Council." The results agree remarkably with the later enumerations, three of which, 1801, 1811, and 1821, make the population of the liberties of London (97 parishes within, and 16 parishes without the walls,) 130,100, including a correction for seamen and strangers. Without correction, the population, in 1831, was 123,683. The enumeration of 1631 has, therefore, been made the basis of these calculations; as it is not probable the population, in the same space, ever exceeded 130,178. The deaths in the 97 + 16 parishes during 31 years, 1616-46, amounted to 279,964; which diminished  $\frac{1}{4}$  for the still-born, and divided by the population (130,178) of the intermediate year, give 6.68 as the annual rate of mortality. The fire disturbed the observations in 1666, so that it was more difficult to obtain an approximation to the mortality in the 20 years, 1660-79: but the enumerated deaths in the 10 years, 1670-79, were 94,644; in the 5 years, 1660-4, 483,000; in 1665, the epidemic year, 56,558; whence 237,349 were deduced as the total deaths in the 20 years. Reduced  $\frac{1}{4}$  for the still-born, the annual rate of mortality

differ very sensibly, before the French revolution, from the mortality in the current years, 1629-35: the mean expectation of life at birth, 1728-37, was calculated by Mr. Simpson to be 19·2 years; while in the 10 years, 1771-80, it was 19·6 by Dr. Price's 16th table. Nearly 5·2 and 5·1 deaths happened annually out of 100 persons living. The mortality of London in 1801-10 had considerably diminished, and was estimated by Mr. Milne to be 1·34·19 annually—2·92 per cent.\* The annual deaths in the 18 years, 1813-30, are stated by Mr. Edmonds at 2·82 per cent.; and as the deaths reported in the bills, 1831-5, were 1·8th more than the deaths in the five years preceding, the mortality has been assumed to be 3·2 per cent. in this period, including an epidemic year.

III.—Table showing the mean Annual Number of Deaths in London produced by 20 Classes of Disease out of 100,000 living.

## REMARKS.

1. The diseases of London in the 16th century still prevail in unhealthy climates: not only the diseases and the manner of death have changed in this metropolis, but the frequency and fatality of the principal diseases have diminished.

2. The reported cases of *fever*, *plague*, *cholera*, and *dysentery*, constituted 4-10ths (·396) of the diseases: they destroyed annually, on an average, 31 per 1,000 of the inhabitants; five times as many as are now carried off by consumption.

3. *Fever*, *plague*, and *dysentery*, were most fatal to adults; but they of course carried off a considerable number of children. Convulsions, and other diseases of infancy, did not decline till the 18th century. The diseases of adults first diminished in violence; and as the state of

was 8·85 per cent.; but, to avoid the risk of exaggeration, the rate of this period, including the plague year, 1665, has been stated in the table at 8 per cent.

\* Treatise on Annuities, &c., by Mr. Milne, vol. ii. p. 428.

the city and medical knowledge improved, the diseases of infants decreased.

4. *Small-pox* attained its maximum mortality after inoculation was introduced. The annual deaths of small-pox registered 1760-79, were 2,323; in the next 20 years, 1780-99 they declined to 1,740: this disease, therefore, began to grow less fatal before vaccination was discovered; indicating, together with the diminution of fever, the general improvement of health then taking place. In 1771-80, not less than 5 in 1,000 died annually of small-pox; in 1801-10 the mortality sank to 2; and in 1831-5 to 0.83.

5. *Measles* became gradually more general in the 18th century; but in 1801-1810, after vaccination was introduced, twice as many died of measles as had died of this exanthem in 1771-80. If scarlet fever and measles, however, have somewhat increased in frequency, the mortality of the three diseases, small-pox, measles, scarlet fever, is only half as great (0.022) as the mortality formerly occasioned by small-pox alone (0.05).

6. *Fever*, exclusively of the plague, has progressively subsided since 1771: *fever has declined nearly in the same ratio as small-pox*. In the three latter periods of the table the deaths from fever decreased as 621 : 264 : 114; from small-pox as 502 : 204 : 83.

7. *Cholera morbus* was as fatal in 1660-79 as in 1831-5: in 1831-5 out of 1,000, but 1.35 are stated to have died of cholera; in 1660-79, the deaths from this disease were 1.48.\*

8. Other *inflammations* besides inflammation of the lungs unquestionably prevailed in London before 1704, when the word found its way into the bills; but its present comparative frequency is not entirely due to a change of nomenclature. Fevers were the reigning diseases, and an impure atmosphere communicated their character to the inflammations; which are still relatively less frequent where fever and dysentery prevail. In Corfu, 1815-21, out of 325 deaths among our troops, 12 were attributed to inflammations, besides 10 to hepatitis; while 223 were ascribed to fever, plague, and dysentery. Sydenham classes pleurisy, bastard pneumonia, rheumatism, erysipelas, and quinsey, together, under the title "intercurrent fevers:" after distinguishing the idiopathic from the symptomatic disease, he says, "I conceive pleurisy to be only a fever occasioned by a peculiar *inflammation of the blood*, whereby nature throws off the peccant matter upon the pleura, and sometimes upon the lungs, whence a pneumonia arises." Fever, then, involved in its vortex the comparatively rare inflammations; inflammation (a vague term), now happening more frequently in a pure form, and proved by *post mortem* examinations to prevail very extensively, has apparently recovered, not only its rightful

\* Sydenham's Works, vol. i. pp. 218-433. "Cholera comes almost as constant at the close of summer, and towards the beginning of autumn, as swallows in the beginning of spring, and cuckows towards midsummer." He closes an accurate description by remarking, that it "often destroyed the patient in 24 hours." Dr. Craigie has demonstrated the antiquity and identity of cholera all over the world; before the last eruption, it had been epidemic in India. He cites a remarkable case from Morton. *Edinburgh Journal*, 1833.

possessions, but several of the unappropriated, unknown diseases, particularly of children.

9. *Consumption* was exceedingly fatal when fevers and dysentery reigned: it is now very fatal among the British troops in the West Indies. Its relative frequency increased down to 1810; in other words, fever and dysentery decreased more rapidly than consumption. The actual proportion of persons destroyed by this disease, as well as other forms of scrofula (rickets and evil), has, except in the anomalous period of 1771-80, progressively declined among the mass of the population in London. If asthma and tisis be added, the declension will be little less apparent.

10. *Dropsy* has been latterly proved to depend frequently on diseases of the heart and of the kidneys: its connexion with agues and dysentery, and with diseases of the liver and spleen, is confirmed by the table.

#### *Fatal Diseases at different Ages.*

The diseases proving fatal in childhood, manhood, and old age, are not the same: hence, to determine the peculiar diseases—the nature of the dangers—we have to encounter at different periods of life, becomes a most important problem. Very few statistical observations exist, in which the deaths from each disease, at different ages, are enumerated. The observations of Dr. Heysham, at Carlisle, when he collected the facts on which the Carlisle table is formed; the diseases of which 4,095 persons, assured in the Equitable Office, died; the bills of mortality of the Anglo-American population in Philadelphia,—are, we believe, the only data of the kind yet (1837) published, either in Europe or America.\*

Mr. Milne, in whose valuable work the Carlisle observations were published, justly remarks, that “the tables of Dr. Heysham had the advantage of being constructed by a skilful physician, capable of discriminating accurately between the different diseases; who either visited the patients himself, or had the means of procuring accurate reports from his medical friends.” The arrangement of Cullen, which Dr. Heysham followed, is so artificial, as to render it very ill-suited to statistical purposes, where it is desirable to bring facts together, not only allied in one fugitive point, but in their fixed anatomical or general characters. The arrangement adopted in the following tables is two-fold: fatal diseases are (1) arranged according to the organs they affected, and (2) according to their pathological nature. The arrangement, we admit, is imperfect; but some arrangement was necessary, and this brings together many interesting features.

\* In every case of death occurring in England or Wales, the sex, age, occupation, and disease are now registered, according to the provisions of the late Act for the Registration of Births and Deaths. The details of the measure admit of some improvements; when these are made, and the observations are reduced to tabular forms, they will exhibit the influence of the principal causes of sickness and death at every age, and in all the circumstances of the different localities, in the island. We have given some of the results already obtained at a subsequent page; and for further information refer the reader to the seven annual Reports of the Registrar-General.

I. Table, which shows the Number of Deaths by each Disease, that took place in each of the under-mentioned Intervals of Age, at Carlisle, during 8 Years, commencing with 1779, and ending 1787, excepting 1780.

\* Of the 134 deaths by eruptive fevers between the ages 0-20, 20-40, the deaths by small-pox were 84 and 1.

## REMARKS.

1. Tables IV., VI., and VII., have been deduced from the four other tables; the absolute mortality was derived, in the same manner as the Carlisle table, from two enumerations of the living at different ages, and the deaths registered during 9 years (1779-1787) by Dr. Heysham; the deaths from each class of disease were ascertained by simple proportion. The rate of mortality amongst persons assured by the Equitable Society agrees nearly with that of Carlisle; so the same absolute mortality was applied to Table VI. as to Tables IV. and VII. The mortality of the class of persons from whom the assured were selected was certainly higher. The observations made in Philadelphia, to which we shall refer, were for the 2 years 1833-1835; the total deaths amounted to 10,106, and were published in annual bills by the Board of Health. The mortality in the 3 years, 1833-1835, was 2.4 per cent.; the deaths in 5 years out of 100 born, 31.3.

2. Of a thousand persons living at Carlisle, *fever* annually destroyed 3.6; *small-pox*, 2.8; the entire class of *eruptive fevers*, 4.5; fever and eruptive fevers, 8.1. The two groups constituted 32.4 per cent. of the fatal diseases; in Philadelphia they amount only to 14, in London to 10.7 per cent.

3. The *eruptive fevers* at Carlisle and at Philadelphia were most fatal under the age of 20; but this does not justify the current belief of medical men, that children are more susceptible of those diseases which affect the organisation only once than adults. Admit that of 100 children born, 50 have small-pox before the age of 10, 26 between the ages 10-20, 14 between 20-30. &c.; is it not evident in this case, that although the absolute number diminishes, the relative number attacked of those who have never had small-pox increases? One who has lived 30 years in the world without an attack of measles is, perhaps, protected by some idiosyncrasy; but *cæteris paribus*, is not a person aged 30 as liable to an attack of measles as a child? Would not small-pox, introduced into a country where it had never been before, attack persons of all ages indiscriminately?

4. Of 1615 deaths, Dr. Heysham ascribed only 20 to *inflammation*, and not one to an affection of the heart or large blood-vessels. This shows not so clearly that these diseases were uncommon, as that great

ignorance of morbid anatomy prevailed among the most accomplished physicians at the close of the last century. In Philadelphia 14·4, in London, 10·8 per cent. of the deaths are attributed to inflammation: after the age of 20 in the Equitable Society 12 per cent., in Philadelphia 14 per cent. of the fatal cases were inflammations.

5. *Consumption and Scrofula* at Carlisle and Philadelphia destroyed annually 3·4 per 1000 of the inhabitants; and 3·8 per 1000 of the persons aged 20 and upwards. One-seventh part of the deaths were, consequently, from consumption; and above the age of 20, one-fifth.

6. The violence of disease, Hippocrates somewhere says, is in proportion to the strength of the patient; and morbid anatomy proves that where there is great debility from age, or any other cause, inflammation runs through its course without manifesting distinctly its characteristic symptoms. The great number of deaths ascribed to natural decay, old age, and to weakness, are for this reason improperly considered examples of death without disease; although death sometimes does happen without any apparent organic cause.

7. What is the effect of the selection exercised by the assurance companies? What class of diseases does it exclude? In the first place, the eruptive fevers. Among 4095 deaths in the Equitable Society, only 1 was of small-pox. The deaths from consumption, instead of making 20, only amounted to 8·3 per cent. of the deaths, or 10·3 if those who died of ruptured blood-vessel be added. But by way of compensation, the deaths from dropsy are 22; from apoplexy and palsy 37 per 1000; instead of 11, 12, and 11, 10·6, the proportions dying of these two classes of disease in Carlisle and Philadelphia. The advantage to the assurance offices of applying tables founded on a city population in the last century, and *including all the sick*, to a class of persons in good health, and little liable to the eruptive fevers or consumption, is obvious. With some study, the selection of long-lived or short-lived persons may be carried to a still greater extent.

8. In proportion as a population becomes civilised, and as its physical condition and mental life are ameliorated, the deaths from apoplexy appear to increase; while the fevers and plagues of the state of barbarism decrease in a much more rapid ratio. The persons assured by the Equitable Society represent the more intellectual order of people in this country; apoplexy is frequent among them: the numerous dropsies and inflammations mark their gastronomic excesses; the mortality from fever and erysipelas proves that they dwell in ill-ventilated houses, and crowded cities, with bad sewers.

9. Life, divided into 5 vicennial periods, is most secure in the second; the fatality of nearly all diseases increases afterwards in a geometrical progression. The observations in Philadelphia show that consumption is not an exception to this law.

10. One of the most important results presented in this paper is, that the character of diseases changes in a determined ratio at different periods of existence. The tables indicate not only the degree, but the kind of danger, we have to encounter at all ages: for example, in the second vicennial period (20-40), the deaths from consumption at Carlisle constituted 50, at Philadelphia 34, in the Equitable Society

26 per cent. of the deaths from all causes;\* in the third vicennium the nature of the danger has altered, for the deaths from consumption contribute but 23-28, or 11 per cent. to the entire mortality. From tables of this description, the probability of death from each class of diseases can be calculated at all ages. We will add one instance of their practical application. In the first period of life (0-20) the eruptive fevers, inflammations, scrofulous and dropsical effusions, are most to be dreaded; in Philadelphia two-fifths of the deaths were from affections of the brain and bowels. Who, with these facts before him, can fail to see the impropriety of giving children preparations of laudanum, spirits, or any food at first but the mother's bland milk? Cold often produces inflammation of the lungs in winter; but too much tenderness in this respect, and the accustoming of boys to a delicate diet, weaken the constitution. Between 20 and 40, *consumption*, inflammations, fevers, and epidemics, are the most deadly shafts of death, which, as Sir James Clark has shown, a judicious course of hygiene in this period may do much to disarm. The same class of diseases maintains the preponderance till 60; but, in the period following (60-80) *dropsies* and inflammations increase, while apoplexy gains a great ascendancy. After 65 a man should undertake nothing requiring great intellectual exertion, or sustained energy: warmth, temperance, tranquillity, may prolong his years to the close of a century; a rude breath of the atmosphere, a violent struggle, or a shock, will terminate his existence. The apoplexy of the aged can, with care, be averted for several years; but it is, perhaps, the natural death, the *enthanasia* of the intellectual: their blood remains pure, the solids firm to the last, when a fragile artery gives way within the head,—the blood escapes, and by a gentle pressure dissolves sensibility at its source for ever. The life is no longer there,—the corporeal elements are given back to the universe!

The diseases incidental to *different periods of life in London* are shown in tables, deduced from returns of the causes of 45,070 deaths for the year 1842, and the census of 1841. The tables, (which will be found in the Registrar-General's Fifth Report,) are the most extensive hitherto framed. The classification by the author of this article, adopted in the Registrar-General's Report, is found to be well suited to statistical purposes.†

*Diseases fatal to Children under 5 years of age.*—The first class of zymotic diseases (so designated from the analogy between the laws which regulate their propagation and fermentation) comprising small pox, measles, scarlatina, hooping cough, &c., is most fatal to children under 5 years of age. Of 100,000 children born alive 9,112 die of this class of diseases within the first 5 years of life. In the third class of head diseases, inflammation of the brain and water on the brain (cephalitis and hydrocephalus) are fatal to 8,242, convulsions to 4,631 children; inflammations of the lungs (bronchitis, pleurisy, pneu-

\* Sir James Clark had this period, probably, in view when he estimated the proportion of deaths from tuberculous diseases, after excluding the deaths in infancy, at a third part of the total mortality in this country.

† See the Statistical Nosology in the Registrar-General's Seventh Report.

monia,) destroy 5,348; consumption 1,887; mesenteric disease 439; teething 1,554; inflammation of the stomach and bowels (gastritis enteritis,) 863; violent deaths 338. The total deaths under 5 years out of 100,000 born alive, are 31,671; of which the above diseases constitute the greater proportion.

*Diseases fatal to Young Persons between the ages 5 and 20.*—These are scarlatina, typhus, hooping-cough, measles, small-pox, dropsy, scrofula, and diseases of joints, cephalitis and hydrocephalus, inflammation of the lungs (bronchitis, pleurisy, pneumonia), heart disease, inflammation of stomach and bowels, and violent deaths. This is the stage of life in which the mortality is lowest.

*Diseases fatal between the ages of 20 and 40.*—Of 30,878 males and 30,806 females, out of 100,000 born, attaining the age of twenty, 6,435 men and 5,397 women die in the next 20 years; namely, 2,936 men and 2,396 women of consumption; 443 women of child-birth; 411 men and 125 women of violent deaths; 355 men and 187 women of pneumonia, bronchitis, and pleurisy; 324 men and 249 women of typhus; 250 men and 168 women of heart disease; 238 men and 276 women of dropsy, generally connected with disease of the heart or kidneys; 187 men and 103 women of sudden deaths in which inquests were held; 92 men and 75 women of apoplexy; 74 men and 54 women of paralysis; 32 men and 68 women of cancer; 1,536 men and 1,253 women of all other diseases.

*Fatal Diseases between the ages of 40 and 60.*—The mortality increases considerably in this period; for of 24,443 men and 25,409 women who attain the age of forty, 10,904 men and 9,109 women never see the age of sixty; 2,932 men and 1,928 women dying of consumption; 816 men and 568 women of inflammation of the lungs; 735 men and 503 women of asthma; 687 men and 1,127 women of dropsy; 559 men and 188 women of violent deaths; 462 men and 426 women of heart diseases; 437 men and 384 women of apoplexy; 386 men and 248 women of sudden deaths; 384 men and 283 women of paralysis; 300 men and 245 women of typhus; 102 men and 486 women of cancer; 88 women of child-birth. The danger of dying of consumption, contrary to the common opinion, is greater in this than in the preceding vicennium. The chance that a man will die of consumption in the next 20 years is  $\frac{1}{10}$  or 2,936 to 27,942 at the age of 20, and  $\frac{1}{10}$  or 2,932 to 19,511 at the age of 40. The relative danger of dying of any other disease is expressed in the same way. Asthma and inflammation of the chest, heart disease, dropsy, apoplexy, and paralysis, it will be observed prevail in this period; after the age of 60 they grow more fatal, and are the causes which most commonly lead to dissolution.

*Fatal Diseases between the ages of 60 and 80.*—Of 13,539 men and 16,300 women who live to the age of sixty; 11,760 men and 13,577 women die in the following twenty years; namely, 994 men and 924 women of asthma; 833 men and 804 women of bronchitis, pneumonia, and pleurisy; 721 men and 1,231 women of dropsy; 664 men and 571 women of consumption; 662 men and 738 women of paralysis; 573 men and 586 women of apoplexy; 465 men and 458 women of heart

disease; 393 men and 271 women of sudden deaths; 270 men and 177 women of violent deaths; 188 men and 268 women of typhus; 96 men and 372 women of cancer.

*Suggestions as to the Means of promoting Public Health in Great Britain.*

1. If governments can do little by *direct enactments* for the diminution of sickness, it is, nevertheless, their duty to determine, by statistical enumerations, the actual state of health, and the extent to which it is deteriorated in different circumstances. Returns of the diseases and deaths in the army, the navy, and all bodies of men employed in the public service, should be made annually; and this, with the results of the general registration, would improve public health, by showing so distinctly the connection between diseases and their natural causes, that men would either avoid or obviate the evils destructive of health by some invention.

2. Almost all classes of the people of this country are profoundly ignorant of the physiological laws which regulate their own existence; health may consequently be improved by making a knowledge of the nature of the human organisation, and of the external agents by which it is influenced, an elementary part of national education. The physical sciences are not, as Count Rumford maintained, the sole sources of human improvement; but without their aid no solid advances can be made in civilisation. For this reason, the works and inventions of Rumford and Arnott will contribute more to the progress of society than many treatises written *ex professo* on the subject.

3. It has been shown, that external agents have as great an influence on the frequency of sickness as on its fatality; the obvious corollary is, that man has as much power to prevent as to cure disease. That prevention is better than cure, is a proverb; that it is as easy, the facts we have advanced establish. Yet medical men, the guardians of public health, never have their attention called to the prevention of sickness, it forms no part of their education. To promote health is apparently contrary to their interests: the public do not seek the shield of medical art against disease, nor call the surgeon, till the arrows of death already rankle in the veins. This may be corrected by modifying the present system of medical education, and the manner of remunerating medical men.

4. Public health may be promoted by placing the medical institutions of the country on a liberal scientific basis; by the medical societies co-operating to collect statistical observations; and by medical writers renouncing the notion that a science can be founded upon the limited experience of an individual. Practical medicine cannot be taught by books; the science of medicine cannot be acquired in the sick-room. The healing art may likewise be promoted by encouraging post-mortem examinations of diseased parts; without which it is impossible to keep up in the body of the medical profession a clear knowledge of the internal changes indicated by symptoms during life. The practitioner who never opens a dead body must commit innumerable, and sometimes fatal errors.

5. It has been proved that, in the present state of things, the mortality is greatly augmented wherever large masses of the people are brought together: it will be the duty of the government, the municipal corporations, and all classes of citizens, to render the towns of this country, and every establishment where large numbers are collected together, perfectly adapted to the wants of the human organisation, and compatible with the full enjoyment of health.

## CHAPTER V.—PROVISION FOR THE POOR.

### SECT. 1. *Policy of Poor Laws.\**

How prosperous soever the condition of the bulk of the inhabitants, still it is found, even in the most favoured countries, that poverty and destitution are the lot of a considerable number of persons; and the questions whether, and, if at all, to what extent, the public should interfere to relieve those in this unfortunate condition, are among the most important that the Legislature has to resolve.

The poor and destitute may be divided into two great classes: the first comprising maimed and impotent persons, or those whom natural or accidental infirmities disable from working; and the second those who, though able and willing to work, are unable to find employment, or do not receive wages adequate for their support and that of their families. There is a wide difference between these classes; and the same means of relief that may be advantageously afforded to the one, may not, in various respects, be suited to the other.

I. With respect to the first class, or the impotent poor, there does not seem to be much room for doubt in regard to the policy, as well as humanity, of giving them a legal claim to relief. It has sometimes, indeed, been contended, that by affording relief to those who are unable, from age or the gradual decay of their bodily powers, to provide for themselves, the motives that induce individuals while in health to make a provision against future contingencies, are weakened; so that, in attempting to protect a few from the effects of their own improvidence, an injury is done to the whole community. This statement is, probably, true to a certain extent; though it is difficult to imagine that any considerable portion of a moderately intelligent population will ever be tempted to relax in their efforts to save and accumulate, when they have the means, from a knowledge that the workhouse will receive them in old age.† But whatever may have been the faults of individuals, it would be abhorrent to all the feelings of humanity to allow them to suffer the extremity of want. An individual is unfortunate, perhaps, or he may not have been as thrifty or as prudent as he ought; but is he, therefore, to be allowed to die in the streets? It is proper, speaking generally, to do nothing to weaken the spirit of industry; but

\* The following remarks on the policy of poor laws, and on the early operation of the English poor laws, are borrowed from the third edition of the *Principles of Political Economy*, by the author of this work.

† Mr. Howlett has some forcible observations on this point in his Tract on the Poor Laws, p. 6.

if, in order to strengthen it, all relief were refused to the maimed and impotent poor, the habits and feelings of the people would be degraded and brutalized by familiarity with the most abject wretchedness; at the same time that, by driving the victims of poverty to despair, a foundation would be laid for the most dreadful crimes, and such a shock given to the security of property as would very much overbalance whatever additional spur the refusal of support might give to industry and economy. It does, therefore, appear sufficiently clear, that this class of poor should be supported in one way or other; and that, when the parties are without relatives or friends, or when these do not come voluntarily forward to discharge this indispensable duty, the necessary funds should be provided by a tax or rate, made equally to affect all classes; for if they are not so raised, the poor will either not be provided for at all, or the burden of their support will fall wholly on the benevolent, who should not, in such a case, be called upon to contribute more than their fair share.

II. The only question, then, about which there seems to be any real ground for doubt or difference of opinion is, whether any legal claim for relief should be given to the able-bodied poor, or to those who, though able and ready to work, cannot find employment, or cannot earn wages adequate for their support? Now this, it must be confessed, is, abstractly considered, rather a difficult question, and does not, perhaps, admit of any satisfactory solution. But whatever theoretical objections may be alleged against a provision for the able-bodied poor, the necessity of the case not unfrequently overwhelms every other consideration, and compels its institution. This necessity may not probably be felt, and is always comparatively gentle in agricultural countries, like Austria, Prussia, or Russia; but it seldom fails frequently to manifest itself in its sternest form in countries far advanced in manufactures and commerce: a compulsory provision for the able-bodied poor may, indeed, be regarded as an essential part of their domestic economy. In the first place, it may be observed, that owing to changes of fashion, to sudden variations in the quantity and value of money, to the miscalculation of producers and merchants, and to political events, those engaged in most manufacturing employments are necessarily exposed to many vicissitudes. And when their number is so very great as in this country, it is quite indispensable that a resource should be provided for their support in periods of adversity. In the event of no such provision being made, and of the distress being at the same time extensive and severe, the public tranquillity would most likely be seriously endangered. It would be visionary indeed to imagine, that those who have nothing should quietly submit to suffer the extremity of want without attacking the property of others. And hence, if we would preserve unimpaired the peace, and consequently the prosperity of the country, we must beware of allowing any considerable portion of the population to fall into a state of destitution. But without the establishment of a compulsory provision for the support of the unemployed poor, it is difficult to see how they could avoid occasionally falling into this state. Through its instrumentality, however, they are sustained in periods of adversity, without being driven by necessity to attack the property of others, and to commit outrages. It is, no doubt,

true that a provision of this sort is liable to abuse. Means may, however, be devised for checking this tendency; and whatever imperfections may, after all, attach to it, it has not yet been shown how security and good order could be maintained in periods when either employment or food was deficient, were it abolished.

In the second place, supposing it were possible (which it is not) to maintain tranquillity without making a legal provision for the support of the unemployed poor, the privations to which, under such circumstances, they would be forced to submit, would, in all probability, lower their notions of what is necessary for their comfortable subsistence, and exert a most pernicious influence over their conduct and character. It can hardly be necessary to enter into any statements to show the importance of endeavouring to maintain the standard of comfort, and consequently of necessary wages among the labouring classes, at as high an elevation as possible. The observations of Mr. Barton on this point are, however, so striking and conclusive, that we shall take leave to lay them before the reader. "It is to be remembered," says he, "that even those who most strongly assert the impolicy and injurious tendency of our Poor Laws, admit that causes wholly unconnected with these laws do, at times, depress the condition of the labourer. Poor families are often thrown into a state of severe necessity by long-continued illness or unavoidable misfortunes, from which it would be impossible for them to return to the enjoyment of decent competence, if not supported by extraneous means. It is well known, too, that a general rise in the price of commodities is seldom immediately followed by a rise in the wages of country labour. In the mean time great suffering must be endured by the whole class of peasantry, if no legislative provision existed for their relief; and when such a rise of prices goes on gradually increasing for a series of years, as sometimes happens, the suffering resulting from it must be proportionally prolonged. The question at issue is simply this: whether that suffering be calculated to cherish habits of sober and self-denying prudence, or to generate a spirit of careless desperation?"

"During these periods of extraordinary privation, the labourer, if not effectually relieved, would imperceptibly lose that taste for order, decency, and cleanliness, which had been gradually formed and accumulated in better times, by the insensible operation of habit and example. And no strength of argument, no force of authority, could again instil into the minds of a new generation, growing up under more prosperous circumstances, the sentiments and tastes thus blighted and destroyed by the cold breath of penury. Every return of temporary distress would, therefore, vitiate the feelings and lower the sensibilities of the labouring classes. The little progress of improvement made in happier times would be lost and forgotten. If we ward off a few of the bitterest blasts of calamity, the sacred flame may be kept alive till the tempest be past; but if once extinguished, how hard is the task of rekindling it in minds long inured to degradation and wretchedness!"\*

In the third place it will, we suppose, be admitted, that when a considerable number of destitute poor persons are thrown out of employment, a provision of some sort or other should, or rather must, be

\* Inquiry into the Causes of the Depreciation of Agricultural Labour, p. 32.

made for their support. Suppose now, that it is made not by a compulsory rate, but by the voluntary contributions of the benevolent: it is contended that such a mode of relieving their distress tends to nourish the better feelings of the poor, and that many would rather submit to the greatest privations than solicit a share of these contributions, who yet would make no scruple of claiming relief had the State legalized their right to support. But admitting the truth of this statement, it has been already seen that it is not for the advantage of society that the poor should be forced to submit to such extraordinary privations. It is, besides, abundantly certain, that many would not be influenced by the motives alluded to; and in the event of the distress being either very severe or long continued, those most disinclined to become a burden on others might be forced, if they did not resort to outrage, to beg a pittance. And it is pretty obvious, notwithstanding all that has been said to the contrary, that the necessary result of such a state of things would be far more prejudicial to the character of the poor; that it would do more to prostrate their pride and independence, and to sink them in their own estimation, than the acceptance of relief from a poor's rate. It is idle, indeed, to talk about the independence of a man who is receiving charity; but an individual supported by the poor's rate cannot fairly be regarded in such point of view. He is merely sharing in a public provision made by the State; and as all property has been acquired with the knowledge that it was responsible to this claim on the part of the poor, it cannot justly be considered as entailing any burden on any particular individual. It may, therefore, one should think, be fairly presumed, that the decent pride and independence of the poor will be more likely to be supported under a system of this sort, than if they were obliged to depend, in periods of distress, on the bounty of others. Wherever the poor have not, either *de jure* or *de facto* a claim for support, they must, unavoidably, in such periods be allowed to beg. But of the scourges that afflict and disgrace humanity, there is, perhaps, none more destructive than the prevalence of mendicity. A common beggar is the most degraded of beings; and the experience of Ireland, France, Italy, Spain, and, in short, of every country where there is no established provision for the support of the poor, shows that wherever they are compelled to depend on so precarious a resource as charity, we look in vain for that manliness and independence of character which distinguish the poor of England, and find in their stead all those degrading vices which beggary is sure to produce.

But whatever may be the disadvantages incident to charitable contributions for the support of the able-bodied poor, it is contended, by some who admit them fully, that they are the only device that can be resorted to without leading to still more destructive consequences than any previously pointed out. A regard for their own interest, were there no other motives to be depended upon, will, it is affirmed, teach those who possess property the advantage of providing for the wants of those who are really necessitous, and will consequently prevent those outrages to which allusion has been made. This contribution will, however, cease with the necessity which gave it birth. When the pressure has passed away, it will not remain to tempt the idle and dissipated to linger on in their vicious courses. It is alleged that the

labouring class would, under such circumstances, feel that they had nothing real to depend upon but their own efforts; and no one would hesitate about saving a little stock when in his power, by trusting to so precarious and humiliating a resource as that of mendicancy. But such, we are assured, is not the case with an established compulsory provision; and granting all that has been urged in its defence, it is contended, that the evils inseparable from it outweigh its advantages. It is acknowledged by all parties to be in most cases quite impossible to discriminate between poverty and misery produced by accidental and uncontrollable causes, and that which has originated in folly or ill conduct. And yet it is said to be obvious, that unless this be done, the establishment of a provision on which every pauper has a legal claim, must, by placing the industrious and the idle, the frugal and the dissipated, on the same footing, have a powerful tendency to weaken the motives to good conduct in the virtuous part of the community, and to strengthen the vicious propensities in those that are bad.

Supposing, however, that it were possible to organize such a system as should prevent all poor persons, except those that were really deserving, from being admitted to participate in the parish funds, still its operation would, it is affirmed, be most objectionable. No man, it must be remembered, loves exertion and industry for their own sakes. Every one has some end or object in view, the accomplishment of which is to repay the toils and privations to which he submits in bringing it about. But the desire to provide subsistence, and to amass a little capital, for the support of age and infirmity, are the principal motives that impel the great body of mankind to industry and economy; and whatever tends, like the establishment of a poor's rate, to weaken or rather to destroy these motives—whatever tends to make a man trust to others instead of himself, must, in so far, paralyze his exertions, and render him less industrious and economical. "*Languescet industria, intendetur socordia, si nullus ex se metus aut spes, et securi omnes aliena subsidia expectabunt, sibi ignavi, nobis graves.*"\*

But, though apparently formidable, it will be found, on a little examination, that the objections to a compulsory provision for the support of the able-bodied poor are not really entitled to much weight. And though they were, no one acquainted, in any degree, with the perilous situation in which a large portion of the population of England is placed, can doubt that such provision is here, at least, altogether indispensable. Without it the peace of society could not be preserved for any considerable period; and those who have property would, every now and then, have to defend it, at the point of the sword, against the attacks of myriads of paupers, impelled by necessity, and made desperate by despair. Under such circumstances, it is fortunate that the inconveniences supposed to be inherent in the principle of compulsory provision may be obviated by regulations as to its management, and that its advantages may be secured without any material alloy.

A statutory provision has been established in this country for above 240 years, for all who cannot support themselves; and we are bound to avail ourselves of this experience, and to decide with respect to its

\* Tacit. *Annal.* lib. ii. cap. 38.

effects, not upon theoretical grounds, or conclusions drawn from imagining what the conduct of the labouring class must be when they have a recognised claim to public support in seasons of difficulty, but by looking to what that conduct really has been during this long period of probation. It is affirmed, and truly, that there was no considerable increase of pauper population in England from the period when the poor laws were established down to the middle of last century; and it is alleged, that its recent increase has been wholly owing to the prodigious extension of manufactures and commerce, and has not exceeded its increase in Scotland, where the system of compulsory provision has made very little progress. It is farther affirmed, that it is false to say that the labouring population of England have, at any time, discovered a want of forethought and consideration; that they were formerly eminently distinguished for these virtues; and that, notwithstanding the unfavourable change made in their condition, by the rise of prices, and the revulsions of industry, during the last half century, they will still bear an advantageous comparison, in these respects, with the people of any other country: and, in proof of this, we are referred to returns obtained under authority of the House of Commons, which show that in 1815 there were no fewer than 925,439 individuals in England and Wales, being about one-eleventh part of the then existing population, members of friendly societies, formed for the express purpose of affording protection to the members during sickness and old age, and enabling them to subsist without resorting to the parish funds, and that the deposits in the savings' banks amount at present (1846) to above thirty millions sterling! It is alleged, that no such unquestionable proofs of the prevalence of a spirit of providence and independence can be exhibited in any other European country. If the poor have, in some districts, become degraded, it is affirmed, that this has not been owing to the poor laws, but to extrinsic and adventitious causes; and, in particular, to the excessive influx of paupers from Ireland, a country where, till very recently, there were no poor laws; and the condition of the population of which affords, it is said, a decisive proof of the fallacy of all the complaints that have been made of their injurious operation. Independently, too, of these considerations, the circumstance of a legal provision existing for their support, by giving the poor an interest in the state, or, as it has been termed, a *stake in the hedge*, interests them in the preservation of the public tranquillity, and inspires them with an attachment to their country and its institutions, which they could not otherwise feel. In densely-peopled manufacturing districts, where the poor have nothing but their wages to depend upon, and where hardly one in a hundred can reasonably hope to attain to a more elevated situation, the poor laws are their only security against falling a sacrifice to absolute want. They are, in fact, a bulwark raised by the State to protect its subjects from famine and despair; and while they support them in seasons of calamity, and prevent them from being driven to excesses ruinous alike to themselves and others, they do not degrade them by making them depend on what is often the grudging and stunted charity of others. A wise statesman will pause before attempting to pull down so venerable and so useful an institution; and will prefer exerting himself to repair the defects

that have been discovered in its structure, and to make it effectual to its truly benevolent object of affording an asylum to the really necessitous, without at the same time becoming an incentive to sloth and improvidence.

Such, in a few words, is the substance of the statements that have been, or may be, put forth by the apologists of the poor laws; and it is impossible to deny that they are well founded. From the period (1601) when the Act of the 43d of Elizabeth, the foundation of the existing code of poor laws, was promulgated, to the commencement of the late war, there was scarcely any increase of pauperism; and few or none of those pernicious consequences had actually resulted from their operation which we might suppose, looking only to some of the principles they involve, they must necessarily produce. This apparent anomaly may, however, be satisfactorily explained. A compulsory provision for the support of the poor would, undoubtedly, have the effects commonly ascribed to it, were it not accompanied by some very powerful counteracting checks. But a very little consideration will show that the establishment of such provision could hardly, unless some formidable barrier be thrown in the way, fail of speedily producing these checks. The error into which the opponents of the poor laws have universally fallen, does not consist so much in their having made any false estimate of their operation on the labouring classes, as in having fixed their attention exclusively on it, without adverting to their operation upon others. It is plain, however, that the rates affect the payers as well as the receivers; and that no sound conclusion can be drawn, in regard to their real operation, without looking carefully at the circumstances under which both parties are placed, and at the conduct which they respectively follow.\* If the object of the one party be, speaking generally, to increase the rates to the highest limit, that of the other is to sink them to the lowest; and it not unfrequently happens that the latter are the more powerful of the two. The Act of the 43d of Elizabeth laid the burden of providing for the poor on the landlords and tenants of the country; but (unlike the new poor law) it wisely left them to administer that relief in the way they thought best, and it stimulated them to take measures to prevent the growth of a pauper population, which have not only prevented it from increasing in an unnatural proportion, but which, there are good grounds for thinking, have confined it within decidedly narrower limits than it would have attained had the poor laws not been in existence.

The truth is, the Act of the 43d of Elizabeth has not been *bonâ fide* carried into execution. The Act says, that employment and subsistence shall be found for all who are unable to find them for themselves. But those who have had the interpretation of the Act were long in the habit, when they suspected fraud and imposture, of tendering relief in public workhouses; and there are very many needy persons who would be eager to claim assistance from the public, if it could be obtained without any extraordinary sacrifice, who would yet reject it when coupled with the condition of submitting to imprisonment, and to the regulations and labour enforced in every well-conducted workhouse.

\* Public attention was, we believe, first directed to this view of the subject by Mr. Black, the late learned and able editor of the *Morning Chronicle*.

In 1723 the workhouse system was placed on a greatly improved footing by the Act 9 Geo. I., cap. 7, which authorized parishes to unite for building workhouses, and also gave them power, if they saw cause, to refuse relief except in a workhouse. This Act formed, during the next half century, a principal bulwark against the progress of pauperism. It is stated by Sir F. M. Eden, that when workhouses began to be generally erected, after the above-mentioned Act, great numbers of persons, who had previously received a pension from the parish, preferred depending on their own exertions, rather than take up their abode in them: and the aversion of the poor to these establishments was so great, that we are told, by the same excellent authority, of some, whose humanity seems to have exceeded their good sense, proposing, by way of weakening this aversion, "to call workhouses by some softer and more inoffensive" name.\*

But of all the circumstances which have contributed to render the growth of pauperism in England so much slower than might have been expected, the most powerful, perhaps, has been, that the system of compulsory provision made it the obvious interest of the landlords and occupiers of land to oppose themselves to the too rapid increase of the labouring population. They saw that if, by the erection of cottages, the splitting of farms, or otherwise, the population upon their estates or occupancies was augmented, they would, through the operation of the poor laws, be burdened with the support of all who, from old age, sickness, want of employment, or other cause, might become, at any future period, unable to provide for themselves. The wish to avoid incurring such an indefinite responsibility, not only rendered landlords and farmers exceedingly cautious about admitting new settlers upon their estates and farms, but stimulated them to take vigorous measures for diminishing the population, wherever the demand for labour was not pretty brisk and constant. It is to the operation of this principle that the complicated system of laws with respect to settlements owed its origin; and until relaxed, it opposed a formidable barrier to the increase of population. There is, indeed, great reason to doubt whether the rural population of England was not rather diminished than increased in the interval between the Revolution and 1770. And it is to the operation of the poor-laws, more, perhaps, than to anything else, that we find so few small occupancies in England; and that she has been saved from that excessive subdivision of the land that is the curse of Ireland. Considering, indeed, the high rents that cottagers will offer for slips of land, and the circumstance that the law of England, by granting the elective franchise to all persons possessed of a cottage and a piece of land valued at 40s. a-year, gives a very strong stimulus to the increase of cottages, we must be satisfied that it required some powerful countervailing principle to render their multiplication so inconsiderable. Political influence is as dear to an English as to an Irish gentleman; but the former, had he manufactured voters by the hundred or the thousand, would have made himself directly responsible for their maintenance; and he has been, consequently, determined by a motive which had no influence over the latter to abstain from so ruinous a practice. Most landlords early saw

\* State of the Poor, vol. i. p. 285.

the consequences that would infallibly result, unless they adopted the necessary precautions, from their being bound to provide for those who, through misfortune, misconduct, or profligacy, could not provide for themselves; and since they could not subvert the principle of the compulsory system, they exerted themselves to prevent its abuse, by adopting every possible device for checking the undue increase of population, and by administering relief in such a mode as might hinder any but the really indigent from having recourse to it.

The truth is, that down to 1795 the universal complaint was, not that the poor-laws had increased population and lowered wages, but that they had diminished it and raised wages. A host of authorities, some of which are referred to below,\* might be quoted in proof of this statement, and explanatory of the means by which so singular a result was brought about; but the following passage from Young's "Farmer's Letters," will probably be deemed sufficient.

"The law of settlement," says Young, "is attended with nearly as many ill consequences as that of maintenance. I have said enough to prove of how great importance our labouring poor are to the public welfare; the strength of the state lies in their numbers, but the prodigious restrictions thrown on their settlements, tend strongly to prevent an increase. One great inducement to marriage is the finding, without difficulty, a comfortable habitation; and another, nearly as material, when such requisite is found, to be able to exercise in it whatever business a man has been educated to or brought up in. The first of these points is no easy matter to be accomplished; for it is too much the interest of a parish, both landlords and tenants, to decrease the cottages in it, and, above all, to prevent their increase, so that in process of time habitations are extremely difficult to be procured. There is no parish but had much rather that its young labourers would continue single; in that state they are not in danger of becoming chargeable, but when married the case alters; all obstructions are, therefore, thrown in the way of their marrying; and none more immediately than that of rendering it as difficult as possible for the men, when married, to procure a house to live in; and this conduct is found so conducive to easing the rates, that it universally gives rise to an open war against cottages. How often do gentlemen who have possessions in a parish when cottages come to sale purchase them, and immediately raze them to the foundation, that they may never become the nests, as they are called, of beggars' brats! by which means their tenants are not so burdened in their rates, and their farms let better; for the rates are considered as much by tenants as the rent. In this manner cottages are the perpetual objects of jealousy, the young inhabitants are prevented from marrying, and population is obstructed."†

It may, perhaps, be said, that had the poor-laws never existed; had the poor not been tempted to place a deceitful trust in parish assistance;

† *Farmer's Letters to the People of England*, 3rd ed. vol. i. pp. 300, 302.

their natural sagacity would have led them to act with prudence and consideration, and prevented the multiplication of their numbers beyond the demand. That this would have been, in some measure, the case, is perhaps true; but considering the state of depression in which the poor have usually been involved, and their total ignorance of the most efficient causes of poverty, there are but slender grounds for thinking that this influence would have been very sensibly felt. A man must be in what is called a comfortable situation before he is at all likely to be much influenced by prospective considerations. The pressure of actual, not the fear of future wants, is the great incentive to the industry of the poor. Those who have speculated upon the operation of the poor-laws over the prudential virtues, have usually belonged to the upper classes, and have supposed that the lower classes are actuated by the same motives as those with whom they associate. But the circumstances under which these classes are placed are so very different, as to render it exceedingly difficult to draw any accurate conclusion as to the conduct of the one, in respect of such matters, from observations made upon the conduct of the other. A man who is in easy circumstances, if he would not lose caste, and would secure a continuance of the advantages which he enjoys, must exercise a certain degree of prudence; but those who possess few comforts, who are near the extreme verge of society, and have but little to lose, do not act under any such serious responsibility. A want of caution, and a recklessness of consequence, are in their case productive of comparatively little injury, and are less guarded against. The most comprehensive experience proves that this is the case. The lower we descend in the scale of society, the less consideration and forethought do we find to prevail. When we either compare the different classes of the same country, or of different countries, we invariably find, that poverty is never so little dreaded as by those who are most likely to become its victims. The nearer they approach it, the less is it feared by them. And that generally numerous class who are already so low that they can fall no lower, scruple not to plunge into excesses that would be shunned by others, and often indulge in gratifications productive of the most injurious consequences.

On the whole, therefore, there seems little reason for thinking that the fear of being left destitute in old age, had a compulsory provision not existed, would have operated with anything like the same force, in deterring the lower classes from entering into improvident unions, as the formidable restraints that grew out of the poor-laws. "A labouring man in his youth," it has been justly observed, "is not disposed to look forward to the decline of life, but listens to the impulses of passion. He sees the picture through the deceitful mirror which his inclinations hold up to him. Hence those restraints which persons of property, interested in keeping down poor-rate, will infallibly impose upon him, are far more likely to be efficacious than those which he will impose on himself."

It may be inferred, from the statements of contemporary writers, that the poor's rates amounted to about a million at the commencement of last century.\* In 1776 they amounted, according to the official returns, to 1,720,316*l.*; and at an average of the years 1783, 1784, and 1785, being those immediately subsequent to the American war,

\* Sir T. M. Eden on the State of the Poor, vol. i. p. 408.

they amounted to 2,167,748. This, when we consider the rise in the price of food, the great increase of population, and the distressed situation of the country at the termination of a disastrous contest, if it be really an increase, is certainly a very small one, and shows that the checks that had grown out of the system were sufficient to hinder the growth of factitious pauperism.

We go on in the work whence these paragraphs have been taken to show the mischievous influence of the changes that were made in the mode of administering the poor-laws between 1780 and 1796, and the mode in which these might have been obviated. In doing this we have had to recommend a system opposed in almost all respects to that introduced by the Poor Law Amendment Act, the 4 and 5 Will. IV. c. 76. Our theory on the subject is brief and simple. We think that all parishes, or unions of parishes voluntarily united for the purpose, should be compelled to provide for all classes of poor persons; but that the mode of providing for them, and the assessments for that purpose, should be left to the discretion of the parochial or union authorities; care being taken that the latter should, in all cases, be formed out of proprietors (or the agents of proprietors) of fixed property, the vote of each being determined by the amount of his property. To suppose that under a system of this sort the poor-rates should not be carefully and economically managed, would be contradictory and absurd, inasmuch as it supposes that men will not take care of their own property; and it is besides at variance with the experience of Scotland, and with that of every country where such a system has been introduced.

But the Poor Law Amendment Act has unfortunately proceeded on wholly different principles; and has taken the principal share of the management of the poor from the authorities in the parishes and unions throughout the country to entrust it to government agents acting under the orders of a central board of three Commissioners sitting in London! The success of this project has been precisely what might have been and *was* anticipated when it was set on foot. Its first effect was to combine the poor into a vast body, and to make the central board, or rather the government under whose orders the board must act, responsible for every abuse in the management of their concerns in every corner of the kingdom. Need any one wonder at the constant complaints and irritation that have grown out of such a system? It is, if anything can be, the climax of folly for a board sitting in London to pretend to dictate to the managers of a parish or union at Penzance or Morpeth how they shall order the concerns of their poor. Must not people of property on the spot, acquainted with all the various circumstances peculiar to each case, and on whom the burden for providing for the poor must fall, be incomparably better qualified than strangers to say how they should be treated? Those who affirm the contrary should, to be consistent, exert themselves to have government agents appointed to conduct the business of every landlord, manufacturer, and merchant in the kingdom.

It is idle to attempt to throw the blame of the failure of this system on the Commissioners. Their management may not, perhaps, have been the best that might have been pursued; but had such been the

case the result would not have been materially different. Unless the Commissioners were omniscient, how are they to become acquainted with all that goes on in the different workhouses throughout the kingdom, for the proper conduct of which they are, among other things, held to be responsible? The truth is, the Commissioners have undertaken duties which it is plainly impossible they can perform. These duties might, however, be easily and effectually performed by others; that is, by the people of property in different parts of the country, who are on the spot, acquainted with all that concerns the poor, and deeply interested in the due and economical management of their affairs.

It would be necessary or very desirable, in reforming the existing system, that a court of easy access should be established, to which the poor might refer their complaints; and the Commissioners might be advantageously continued for that purpose. But all their legislative and directorial functions should forthwith cease; and the guardians and parochial authorities, and not the Commissioners and their staff, should be held to be responsible for the proper treatment of the poor.

The following account of the introduction and operation of the existing system, has been drawn up by a gentleman concerned in its administration. We need not, therefore, be surprised at its being in favour of that system; but it is concisely and ably written, and may be consulted with no little advantage by all who wish to make themselves acquainted with the subject.

#### SECT. 2. *Poor Laws of England and Wales.*

THAT complicated and extensive body of English law, which is known as the "Poor Laws," consists of about 150 statutes, either wholly or partially in force, and either directly or indirectly bearing on the subject, besides a vast mass of decisions of the courts, to which the litigation occasioned by those enactments has given rise in the course of two centuries and a half. These statutes and decisions were made at various periods, under widely different circumstances, and during the prevalence of feelings and opinions the most dissimilar; and they consequently contain a multitude of provisions, which differ greatly in their objects and tendency, and which can only be reconciled and adequately explained by a reference to their origin. Independently of its intrinsic interest, therefore, a history of the poor laws is indispensable to the right understanding of their present state.\* In the following very summary sketch, the more prominent points of that history will be briefly noticed.

*Historical Retrospect.*—Although the existing system of parochial relief is based upon the celebrated measure of 1601, the 43rd Eliz. chap. 2, and the previous enactments have now no practical effect, a rapid glance at the course of legislation on the subject before that time, will nevertheless be desirable.

The earliest statutes were chiefly, if not exclusively, directed to the

\* Those who wish to pursue the inquiry further, by comparing the systems adopted in other countries, and their several results, with our own successive experiments, will be interested in perusing Mr. Senior's "*Statement of the Provision for the Poor, and of the Condition of the Labouring Classes, in a considerable portion of America and Europe.*"

restraint of vagrancy and mendicancy. Probably owing, in a great degree, to the gradual extinction of villenage, and the growth of free labour in its stead, these evils began to manifest themselves in the course of the 14th century, so as to call for the interference of the state.\* The first experimental check was the prohibition of almsgiving. In 1349, the Ordinance of Labourers (23 Edw. III., c. 7), enacted that, "because many valiant beggars, so long as they may live of begging, do refuse to labour, giving themselves to idleness and vice, and sometimes to theft and other abominations, none, upon pain of imprisonment, shall, under the colour of pity or alms, give anything to such, which may labour, or presume to favour them in their sloth, so that thereby they may be compelled to labour for their necessary living." The remedy thus devised, however, was apparently not very effectual; as vagabondism continued to increase, and from time to time to attract the attention of the legislature, until in 1388, an attempt was made to repress it, by treating it as a punishable offence. The 12 Ric. II., c. 7, enacted that "every person that goeth begging, and is able to serve or labour, should be forthwith put into the stocks;" making an exception, however, in favour of people of religion, hermits, pilgrims, and scholars of the universities, having respectively letters testimonial.

This statute, however, did not confine itself to "valiant beggars," but went a step further, and directed that "beggars impotent to serve should abide in the cities or towns where they were dwelling at the time of the Act; or if the people there would not or could not maintain them, should withdraw to other towns within the hundred, rape, or wapentake, or to the towns where they were born, and there abide continually during their lives." This enactment seems to contain the first germ of the modern law of settlement. How far it may be considered as the commencement of a legal provision for the relief of the poor, is doubtful. It did not expressly cast upon the hundreds, &c., to which the "impotent beggars" were required to resort, any direct obligation to support them; but it seems to have given the latter an implied authority to beg within those limits.

Three years afterwards, in the same reign, we meet with a more specific provision for the maintenance of the indigent in certain cases. The 15 Ric. II., c. 6, (A.D. 1391,) required that, on the appropriation of any parish church, the diocesan should ordain, according to the value of the church, a convenient sum of money, out of the fruits and profits of the same church, to be paid and distributed yearly by the appropriators, to the "poor parishioners" of such church, in aid of their living and sustenance for ever. This was a distinct enactment securing to the poor, in certain cases, a right to that relief from the

\* The decline and final extinction of villenage in this country is a subject of great obscurity (see Hallam's *Middle Ages*, ch. 8, part iii.); but that free service had largely taken its place by the middle of the 14th century, and that the emancipation of labour would compel the destitute to look to some other source of relief than the lord's bounty, can scarcely be doubted. The introduction of a state provision for the poor in our West Indian colonies, consequent on the abolition of slavery there, presents in our own times an instance in many respects instructively parallel.

ecclesiastical revenues, which they no doubt received to a great extent from the church and the monasteries by way of charity.

In the reign of Henry VII. the evil of vagrant mendicancy again obtruded itself upon the notice of the legislature. The 11 Hen. VII., c. 2, (1495,) and 19 Hen. VII., c. 12, (1504,) contained provisions similar to those of the 12 Ric. II., c. 7, but somewhat modified. The 22 Hen. VIII., c. 12, (1531,) did not differ from the foregoing statutes in principle, but its regulations were more detailed and more stringent. According to its directions, the justices of the peace were to assign to the impotent poor the limits within which they might beg; and persons begging beyond those limits, or without a licence, were to be punished by whipping, or the stocks. Able-bodied beggars were to be whipped and sworn to return to the place where they were born, or last dwelt for three years, and there put themselves to labour.

We now come to the second epoch in the history of the poor laws, the transition period from the dissolution of the monasteries to the passing of the 43rd Eliz. c. 2. It is manifest, from the statutes already cited, that the evils of able-bodied mendicancy and impotent poverty had been continually increasing through the land, long before and down to the time of the suppression of the religious houses; which event did not, perhaps, augment the actual amount of those evils, but rather, by drying up one considerable source of their relief, forced them more pressingly and more conspicuously upon the attention of the community.

In 1536, the legislature discovered that the Act of 1531 was defective, inasmuch as it did not provide how "the said poor people and sturdy vagabonds" should be ordered on their repairing to the places indicated, nor how the inhabitants of every hundred should be charged for the relief of the one class and the employment of the other. To supply these omissions, a statute was passed, which is interesting as containing the first rough draft or outline of the plan, that was afterwards more fully developed in the well-known Act of Elizabeth. This statute was the 27 Hen. VIII., c. 25; \* which addressed itself chiefly to three points. It rendered the punishments for "sturdy beggars" still more severe than formerly,—whipping for the first offence, cropping the right ear for the second, and death as a felon for the third. It directed that "such as be lusty" should be kept to continual labour; and that "the poor, impotent, lame, feeble, sick, or diseased people, being not able to work," should be relieved, "so that in no wise they, nor none of them, be suffered to go openly in begging." And it provided a machinery for the collection and distribution of voluntary alms towards these purposes; confiding those duties to the head officers of towns, and the churchwardens, with two other persons,

\* The 1st vol. of the *Proceedings of the Statistical Society of London* contains an interesting paper by Mr. Hallam, giving an account of some remarkable regulations enacted by the magistrates of Ypres, in Belgium, either in 1525 or in 1530 (a doubt lies between these two dates), for the maintenance of the poor. These regulations appear to have been generally adopted in the adjacent provinces of the Netherlands, under an edict of the Emperor Charles V.; and, as stated by Mr. Hallam, manifestly formed the model which was followed a few years afterwards by the legislature of this country.

in parishes, and exhorting the clergy, as well in their sermons, collections, and bidding of the beads, as in the time of confession and making of wills, to stir and provoke people to be liberal in their gifts. It did not, however, go so far as to introduce the principle of compulsory assessment; but it prohibited almsgiving otherwise than in the manner just described, or to fellow-parishioners, or prisoners; and it imposed on every parish making default in the execution of its provisions, a penalty of twenty shillings a month.

This statute was followed, in 1547, by the 1 Edw. VI., c. 3; which recited that the former Acts had had small effect, partly from foolish pity on the part of those who ought to have enforced them, and partly from the perverse nature and long-accustomed idleness of the persons given to loitering. The Act therefore proceeded to treat all able-bodied vagabonds with the utmost severity; beating, chaining, branding, slavery for a term, slavery for life, and even death, being included in the abundant variety of its penalties. As it was repealed within three years after its enactment, it need not be further adverted to, except to observe that it seems to have been the first statute which authorized the removal of the poor to the places of their legal settlement. On this point, it directed that the impotent poor should be conveyed by one constable to another, on horseback, cart, chariot, or otherwise, until brought to the place where they were born, or were most conversant for three years, there to be kept and nourished on alms.

In 1551, the 5 and 6 Edw. VI., c. 2. made some detailed regulations, on the plan of the 27 Hen. VIII., c. 25, for the authorised collection and distribution of voluntary alms; adding, however, that if any one, able to further the charitable work, obstinately and frowardly refused to give, or discouraged others, he should be gently exhorted by the minister and churchwardens: but if he would not be so persuaded, the bishop was to send for him, to induce him by charitable ways and means, and so according to his discretion to take order for the reformation thereof.

But these gentle exhortations and charitable persuasions proved, it would seem, very insufficient stimulants to the flagging benevolence of our ancestors; and accordingly, in 1563, the 5 Eliz., c. 3, enacted that, if the obstinate person would not be persuaded by the bishop, he should be brought before the justices at the next session, who should gently move him to extend his charity. If he still persisted in his froward refusal, the justices, with the churchwardens, were empowered to tax him, according to their good discretion, what sums he should pay weekly to the relief of the poor of the parish in which he might be dwelling; and to commit him to prison, in the case of non-payment, until he should comply with their order. In this proceeding, we observe the first introduction, although to a very limited extent, of the principle of compulsory taxation; which, soon afterwards (within 10 years), was adopted fully by the legislature, in the 14 Eliz., c. 5, passed in 1572. This statute continued the old plan of attempting to put down "rogues, vagabonds, and sturdy beggars," by severity of punishment; the penalties being graduated from whipping and burning through the ear, to death without benefit of clergy; but at the same time it made provision for the relief of the impotent poor, in the

following manner. The justices, within their several divisions, were required to ascertain and register the names of "all aged, poor, impotent, and decayed persons," living by alms, who were born there, or had been dwelling there within three years before; to settle the same poor people in meet places within their respective divisions; to set down the amount of the weekly charge for the sustentation of these persons; and, "by their good discretions, to tax and assess all the inhabitants dwelling within the said divisions to such weekly charge." The justices were also authorised to enforce the payment of the tax by imprisonment; and to appoint officers for collecting and distributing it under their direction. In applying this fund, the justices were first to provide for the impotent poor; and in the next place, to set to work the able-bodied rogues and vagabonds, who were to be sustained only upon their labour. And if any of the impotent poor refused to give up begging, and to remain where they were settled by the justices, or refused to work to the extent of their ability, they were made liable to be punished as rogues and vagabonds. But the justices in sessions might, nevertheless, give the poor in those places where collection of money could not presently be had, a licence to gather alms at the houses of the inhabitants "within such other town, parish, or parishes of the county, as the said justices should name;" and the inhabitants of such town or parish were bound, under penalties to be inflicted by the justices, to relieve the said poor accordingly. It will be observed, that this statute cast the charge of the relief of the poor generally, upon the divisions under the jurisdiction of the several justices; whilst the tendency of the previous enactments had been, to make it a matter of parochial concern, and to engage the clergy and churchwardens in the discharge of the principal functions connected with it. In 1598, however, the legislature returned to the ecclesiastical district of the parish; an Act being passed in that year, the 39 Eliz., c. 3, which very closely resembled its more famous successor of 1601. The 39 Eliz., c. 4, should also be noticed as one in the continued series of enactments for the punishment of rogues and vagabonds.

The third epoch in our poor law history commences with the year 1601, when the 43 Eliz., c. 2, laid the permanent foundation of a system, which has received, and justly deserves, very high eulogium as one of the most remarkable instances of practical legislation. It made provision for the relief of the impotent poor; directing at the same time that work should be found for such able-bodied poor persons as were unable to maintain themselves. The agency or machinery by which this principle of making the relief of the able-bodied poor depend upon their rendering their labour in return, has varied greatly in subsequent periods; but the principle itself has never been lost sight of. The scheme of this statute, in its general outline, required that overseers should be annually appointed by the justices, in the several parishes throughout the country; and entrusted to those officers, in conjunction with the churchwardens, and under the control of the justices, the duties of raising the necessary funds by rateable taxation of the inhabitants, and of applying those funds to the maintenance of the destitute, and the employment of such of the poor as might be able to work.

The 7 Jac. I., c. 4, (1609), enlarged the provisions of the 39 Eliz., c. 4, with respect to the confinement and employment of rogues and vagabonds in houses of correction.

The establishment of a legal provision for the poor seems to have led to the growth of a new set of evils, which in the reign of Charles II. occasioned a legislative attempt to repress them. The 13 and 14 Car. II., c. 12, (1661-2,) recites, that "whereas by reason of some defects in the law, poor people are not restrained from going from one parish to another, and therefore do endeavour to settle themselves in those parishes where there is the best stock, the largest commons or wastes to build cottages, and the most woods for them to burn or destroy; and when they have consumed it, then to another parish; and at last become rogues and vagabonds; to the great discouragement of parishes to provide stocks, where it is liable to be devoured by strangers;" and it proceeds to enact provisions for the removal of persons so coming to settle, within forty days after their arrival, unless they have taken a tenement of the yearly value of 10*l*. Other regulations were also made in this statute, as well as in several subsequent Acts passed in the same and succeeding reigns, having, for their object, to diminish the facilities for gaining settlements, and for contracting habits of pauperism according to law.

But the restriction on the free circulation of labour, which resulted from the operation of the settlement laws, came ere long to be severely felt; as is shown by the preamble to the 8 and 9 Will. III., c. 30, (1696,) which describes the evil arising from the confinement of the poor within their own parishes, "though their labour is wanted in many other places, where the increase of manufactures would employ more hands." It is curious to observe, that the efforts of the legislature, instead of being directed, as formerly, towards the repression of mendicant vagrancy, were now turned against the somewhat contrary habits generated by settled pauperism. The general improvement in the habits, intelligence, and wealth of the people, had no doubt contributed largely to reduce the former evil; but it is clear that the poor laws likewise assisted in bringing the poorer classes into a settled condition, and indeed eventually led them into the excess of resisting all change of place, in the fear of losing their title to relief without the liability to removal.

The 9 Geo. I., c. 7, passed in 1722, was the next important attempt to cope with the increase of pauperism, which was doubtless fostered, to a great extent, by the mischievous effects of the settlement laws.\*

\* The effect of these laws was, we believe, entirely contrary. But, without insisting on this point, it is sufficiently obvious that the principle laid down in the Act 9 Geo. I. c. 7, should not have been interfered with. It gave leave to the parochial authorities, if they thought fit, to refuse relief to parties claiming assistance, except in workhouses; and it authorized two or more parishes to join together to build a workhouse for their common use. But in the 19th century, we are not satisfied with permitting parishes to look after their own interests. The legislature takes it for granted, that they do not know where the shoe pinches, and cannot take care of themselves; and consequently authorizes the Central Board to compel parishes, however disinclined to such union, to join with others, to build workhouses; and to send, at the bidding of the sub-commissioners, their poor to these establishments, when, perhaps, they might keep them at home for half the expense,

This Act gave the justices large powers of control over the overseers in the actual distribution of relief; and is especially remarkable as introducing a new mode of administering relief, the partial and gradual adoption of which has at length resulted in its complete recognition by the general law. It enabled parishes (but did not compel them) to provide themselves with workhouses,\* for the maintenance and employment of the poor, either by erecting a separate building, or by uniting with other parishes for the purpose, or by contracting, for the reception of their paupers, with other parishes having workhouses.

The two principal features of this new scheme,—workhouse relief and parochial unions, had been previously adopted in a few corporate towns under the authority of local Acts; and were now rapidly extended to other towns and districts, under the like authority. These local Acts, also, in most instances, took the administration of relief out of the hands of the overseers and the justices, and transferred it to a body, called by a variety of designations, such as governors, directors, and guardians of the poor, and either self-elected or elected annually by the ratepayers.

Notwithstanding all these measures, however, poor rates and pauperism continued to increase; and with a view to check their further progress, the 22 Geo. III. c. 83, was passed in 1782. This Act (usually called Gilbert's Act), may be regarded as an exception to the general course of our legislation for the poor. Instead of requiring the able-bodied to be set to work as a condition of their receiving relief, (like the statute of Elizabeth); instead of rendering the workhouse a means of employing that class of paupers, (like the statute of Geo. I.); it reserved the workhouse for the aged, the sick, the infirm, and orphan and other children; and directed the guardians of each parish (who to a great extent replaced the overseers) to find private employment near their own homes for poor persons able and willing to work, receive the wages, apply them to the maintenance of such persons, make up any deficiency from the poor rates; and pay over any surplus to the individual; and to prosecute idle and disorderly persons able but unwilling to work. The Act might be adopted by any parish, or by any union of parishes formed under its provisions; but it does not appear to have been at any time extensively resorted to, and is now confined to a very few districts.

The deviation observable in Gilbert's Act, from the earlier and sounder principles, grew wider and wider in the subsequent legislation, until it reached its utmost limit in East's Act, the 55 Geo. III. c. 137, passed in 1815. By this statute, justices were empowered to order relief to be given for any time not exceeding, where the order was that of one justice, three months, where it was that of two justices, six months; and this relief, instead of being afforded in the workhouse, was to be paid to the poor at their own homes. The amount, however, which the justices might order to be paid for any period beyond a month, was restricted to 3s. per week for each person, or to three-fourths

That such a law should have kept its place on the statute book for a dozen years, is not a little surprising.

\* It is supposed that the introduction of such establishments into this country was suggested by the success of similar institutions in Holland.

of the average expense of maintaining a person in the workhouse. The mischievous and demoralizing influence of the mistaken, though doubtless well meant, policy, of which this statute may be regarded as the crowning work, is abundantly proved by the evidence given to every Parliamentary Committee which afterwards sat to investigate the subject, as well as to the Commission of Inquiry appointed in 1832.

Sturges Bourne's Act, the 59 Geo. III. c. 12, (1819,) made some approach towards a return to the plan of requiring work as a condition of the receipt of relief. The method it adopted, however, was not a well-devised one; as it directed the overseers to pay "reasonable wages" to the poor persons they employed, and gave to such persons "such and the like remedies for the recovery of their wages, as other labourers in husbandry have;" thus placing the parish in the situation of a private employer, with the disadvantage of being unable to choose whom it would employ. The Act enabled parishes to take land for the purpose of employing the poor in its cultivation; and introduced some changes into the administrative machinery of the poor laws, by providing for the constitution of select vestries to control, and to a great extent supersede, the overseers, and for the appointment of paid assistant overseers to assist them in their office. But the appointment of such vestries and assistant overseers was left at the option of the parishes. The 1 and 2 Wm. IV. c. 60, or Hobhouse's Act, (1831) had in view the same object of improving the administrative machinery. Its provisions could only be adopted by parishes of large population, and with the consent of at least one-third of the rate-payers; and had reference chiefly to the election of vestry-men, to replace the overseers in regard to the relief of the poor, and of auditors, to discharge the functions of the justices in the auditing of the parish accounts. Very few parishes have had recourse to this Act; but these few are large and populous.

From this slight review, it will be manifest how numerous and conflicting the principles and modes of administration had now become, in this department of the law; while the number of subordinate enactments and of decisions of the courts, had contributed so largely to complicate the system, that it was in fact extremely difficult either to be comprehended as a whole, or to be reconciled in its various parts, especially by the untrained and ever-changing officers to whom its execution was entrusted. Irregularities of all kinds naturally followed, which in their turn gave rise to continual litigation; the unpaid and nearly irresponsible officers found, and did not fail to take advantage of abundant opportunities for abusing their powers for their private ends; and even the control which might be lawfully exercised by the magistracy, was, from various causes, altogether insufficient to check the increasing evils arising from the misapplication or the mismanagement of the poor rates.

Parliamentary committees had from time to time been appointed, and had received evidence and reported on it, without being able to come to any conclusion as to the measures necessary to abate the evils, which all admitted to be enormous, and many feared to be irremediable. At length, in 1832, a Commission of Inquiry was appointed by the Crown, with larger and more effectual means of investigation than even

parliament itself could employ. The inquiry was directed by the Commissioners, and conducted in detail by Assistant Commissioners. On the 20th February, 1834, the Commissioners made an elaborate report, accompanied by the evidence they had collected, describing the prevailing abuses of the law, their evil consequences, and their various causes, and suggesting a series of remedial measures. To this report, the reader is referred, for detailed information on these various points; it may be sufficient here to observe that the Commissioners found the effects of these wide-spread and growing abuses to be of the most disastrous character, threatening to become still more ruinous to the country. The poor-rate expenditure had been for some time increasing in a ratio much greater than the population; and where the increase was the largest, the effect upon the character and position of the labourers seemed to be the most pernicious. The evils were rifest in the agricultural counties, especially in the south, though by no means exclusively confined to those districts. The incendiary fires, and machine-breaking riots, which prevailed about 1830-31, were not only an indication of the disorganized state of the agricultural districts, but were also at the time regarded, and no doubt rightly enough, as one among the many unhappy results of the mal-administration of the poor laws. It is an indicative fact, that these fires and riots were mainly confined to the counties which were most pauperized, and in which the consequences of the poor law mismanagement were most fully developed. In giving a summary of the answers to a request for information concerning the causes and consequences of the agricultural riots and burnings of 1830 and 1831, the report states,—“The result is, that of 93 parishes, in four ill-administered counties, the population is 113,147, and the expenditure 81,978*l.*, or 14*s.* 5*d.* per head; and of 80 parishes in three well-administered counties, the population is 105,728, and the expenditure 30,820*l.*, or 5*s.* 9*d.* per head; and that those counties in which the expenditure is large, are those in which the industry and skill of the labourers are passing away, the connexion between master and servant has become precarious, the unmarried are defrauded of their fair earnings, and riots and incendiarism have prevailed. The three counties in which it is comparatively small, are those in which scarcely any instance of fire or tumult appears to have occurred, in which mutual attachment exists between the workman and his employer, in which wages depend not on marriage, but on ability, and the diligence and skill of the labourers are unimpaired or increased.”\* In a few places, the mischief became so unmanageable, as even to throw the land out of cultivation; and where the evil attained its greatest height, the ruined character of the labourers attested its devastating influence.

This Act, 4 and 5 Will. IV., c. 76, which was founded on the recommendations of the Commissioners, received the Royal Assent on the 14th August, 1834; having been passed in both Houses of Parliament with an astonishing degree of unanimity, notwithstanding some violent

\* See also the account of the rural disturbances in *Annual Register for 1830* (vol. xxii. Hist. p. 149, Chron. p. 199); and the Circular to the magistrates, from the Home Secretary, dated the 8th December, 1830, as to the impolicy of yielding to the demands of the rioters—(*ib.* Chron. p. 200.)

opposition out of doors. It introduced very considerable changes in the machinery for the administration of the law; by narrowing the authoritative control of the justices; by substituting, as regards the distribution of relief, guardians annually elected by the ratepayers and owners of property, for the overseers appointed by the justices; and especially by creating a central Board of Commissioners, with large superintending powers. It also provided for the formation of unions of parishes; for the erection of workhouses; and for the appointment of paid officers by the Boards of Guardians. Among the chief evils in the distribution of relief, which the statute was intended to remedy, were the allowance of relief in aid of wages, and other irregular and mischievous practices connected with the relief of the able-bodied; and the reduction and regulation of the out-door relief (*i. e.* relief afforded out of the workhouse) to this class of paupers, were the principal means on which it relied for the removal of these abuses. The amendment of the bastardy laws, by taking away from the mothers of bastards the superior advantages in the way of relief which, as such mothers, they obtained under the old system, was another of the objects contemplated by the measure.

The statutes which have since been passed have not interfered with the principle of the Act of 1834, (except, perhaps, with respect to bastardy,) but have been chiefly designed to further and facilitate the full accomplishment of its objects. Among them may be noticed, as the most prominent, the 6 and 7 Will. IV., c. 96 (1836), which relates to the assessment of the poor rates; the 5 and 6 Vict., c. 57 (1842), for the further amendment of the poor laws; and the 7 and 8 Vict., c. 101 (1844), which modified the law in a variety of important details, such as the election of guardians and the audit of accounts, which made a radical change in regard to bastardy, by leaving the remedy against the putative father to the mother alone, and disconnecting it entirely from the parishes, and which provided for the formation of districts for the establishment of schools for the pauper children, and of asylums for the casual poor. The Act of last session (1846) relating to the removal of paupers (9 and 10 Vict., c. 66) should likewise be noticed, as protecting paupers under certain circumstances from the inconveniences of being removed to the parishes of their legal settlement. Though not directly connected with the relief of the poor, it is right to advert to the Acts for the registration of births, deaths, and marriages, and for the extension of vaccination; with respect to which, the Legislature has taken advantage of the poor law machinery for carrying out the detailed execution of their provisions.

*Existing System.*—The retrospective glance which we have just given at the history of the poor laws, will indicate the very complex nature of that public provision for the relief of the destitute, which has gradually matured itself, through the experiments of centuries, into the system that now prevails. In attempting to trace a concise but comprehensive outline of this system, it may be convenient to notice first the several classes of poor, and the different modes of relieving them; and afterwards to describe briefly the administrative machinery.

The accumulated effect of the English poor laws is, that no person

in England or Wales shall be absolutely destitute of the necessary means of subsistence; the property of the community, while any assessable property remains, being made liable to contribute to the maintenance of all its members. This legal provision for the indigent removes all pretext for begging or plunder as derived from the want of the necessities of life; and accordingly, in our criminal law, not only does poverty fail to exculpate theft, but it is a specific offence, punishable by imprisonment, publicly to beg, or gather private alms, or procure or encourage any child to do so (5 Geo. IV. c. 83).

But to prevent unfounded claims upon the fund intended only for the really destitute, and to diminish the inducement which the existence of that fund affords to indolence and voluntary pauperism, as well as to apportion the relief according to the actual necessities of its recipients, it has been found necessary to subject the several classes of persons requiring relief to different regulations. Those classes are, chiefly, the impotent poor, whether impotent through old age or infancy, through bodily or mental infirmity, through sickness or accident; the able-bodied poor; and the casual poor, whether impotent or able-bodied.

With respect to the impotent through old age or through bodily infirmity, the 43 Eliz. c. 2., s. 1, provides that "competent sums of money for and towards the necessary relief of the lame, impotent, old, blind, and such other among them being poor and not able to work, shall be gathered out of the parish," &c. The prudent character of this enactment is shown in its limitation to "necessary relief," even in the case of the most legitimate objects of relief; while it benevolently assures all that can be secured to them without relaxing, to a dangerous extent, the restraint on improvidence in health or early life. Paupers of this class being "poor and not able to work," the statute does not require that they shall be set to work as a condition of relief; and in the same spirit, the Act of 1834 (the 4 and 5 Will. IV., c. 76, s. 27), provides for the exemption, on the order of two justices, of "any adult person who shall from old age or infirmity of body be wholly unable to work," from the necessity of receiving relief in the workhouse.

Paupers impotent through infancy, are either those who, having some bodily infirmity, are disabled, wholly or partially, for labour; or those who, being free from other infirmity than such as arises from their youth, may be expected one day to become, by their own exertions, independent of relief. The former, when destitute of friends or of private means of subsistence, are subject, in the main, to the same considerations as those who are impotent through age, and are entitled to be relieved in the same manner, and under the same enactments; and even the parents of such children as are blind, deaf, or dumb, are exempted (see 4 and 5 Will. IV., c. 76, s. 56), from the liabilities which attach to the parents of other children relieved by the parish. With regard to such children as may be expected to become independent of relief, it is obviously desirable that motives should be given and means supplied to them, by which that result may be most effectually promoted. In accordance with this view, the 43 Eliz., c. 2, provides for setting to work the children of such parents as are unable

to maintain them; and for putting them out to be apprentices. While the administration of relief remained in the hands of the overseers, several statutes were passed for the purpose of regulating the apprenticing of pauper children; chiefly by subjecting the proceedings of the overseers to the direct supervision and control of the justices, and by imposing various restrictions as to the selection of the masters, the age of the apprentice, the manner of the binding, and so forth. But the duties of overseers in this matter have recently been transferred to the guardians of the poor, the interference of the justices dispensed with, and the power of control invested in the Poor Law Commissioners, (see 4 and 5 Will. IV., c. 76, s. 15; and 7 and 8 Vict., c. 101, s. 12.) The Commissioners, on the 31st December, 1844, issued a general order prescribing detailed regulations for the guidance of the guardians in the discharge of their duties on this subject.

These principles in regard to the relief of children apply equally to the legitimate and the illegitimate; but it may be mentioned that, before the passing of the Act of 1834, a peculiar practice, originating in a singular perversion of the law, obtained with respect to bastards, that of requiring the parish to give relief in money to the mother, in case the putative father failed to do so under an order of justices; thus placing mothers of bastards in a position far superior, as respects parochial support, to that of perhaps any other class of women. This irregular and mischievous practice was corrected, to a great extent, by the Poor Law Amendment Act of 1834; but the further Amendment Act of 1844 (7 and 8 Vict., c. 101) put the matter entirely on a new footing, by disconnecting the parish altogether from the affiliation of bastards, and creating a remedy against the putative father available to the mother alone.

The education of pauper children is an essential part of their relief; and the Poor Law Commissioners are expressly empowered to issue orders for its regulation, in the case of children in workhouses. And the Commissioners have paid very considerable attention to this important subject.\* The 7 and 8 Vict., c. 101, (ss. 40—52) provides for the combination of Unions and parishes into school districts, for the education of pauper children.

Those who are impotent through sickness or accident are entitled to such relief as the peculiar character of their necessities may call for. In so far as they come under the designation of "Casual Poor," they will be spoken of more at large hereafter. To the entire class, efficient medical aid is secured, by the appointment of legally qualified medical officers, in the several unions and parishes; and medical relief is duly afforded, either in the workhouse or at the paupers' own homes, as the cases may respectively require.

To paupers impotent through mental infirmity, special enactments are applicable. The workhouse, of which the most appropriate use is to keep those employed who are able to work, is obviously unfit for this unfortunate class, who are not voluntary paupers, and whose peculiar necessities require physical and moral treatment wholly different from that of other destitute persons. Accordingly, the 4 and 5

\* See especially their Report on the training of pauper children, dated January 21, 1840.

Will. IV., c. 76, § 44, enacts that no dangerous lunatic, insane person, or idiot, shall be detained in any workhouse for more than 14 days. Asylums for pauper lunatics have been established, at the expense of the county, in many of the counties of England and Wales; and the 8 and 9 Vict., c. 126, renders it compulsory upon those counties which are not already so provided, to supply the omission forthwith. A reference to this statute, and to the 8 and 9 Vict., c. 100, will furnish detailed information concerning the management of these asylums, as well as the registration of public hospitals and the licensing of private houses for the reception of lunatics; and also concerning the mode of sending paupers, under the authority of justices, to such institutions, maintaining them therein, and discharging them therefrom.

Such are the classes of impotent poor, with respect to whom the Legislature has manifestly exhibited a continual solicitude for the alleviation of their misfortunes. It may perhaps be contended that this solicitude would have been more prudently exemplified, if stronger inducements had been held out to those, who are in the enjoyment of health and strength, to provide against the casualties of life, and its decline; but at all events, in this portion of the Poor Laws, the humanity which addresses itself to the alleviation (if not to the prevention) of misery, is emphatically displayed, in contradistinction to those provisions which have in view the further object of securing society, as well as the individual, from the evil consequences which attend the indulgence of habits of indolence and improvidence.

Statutes designed to encourage the industry of those who were able to work abounded in our early legislation. The severe penal enactments directed against those who followed no course of industry, or lived by begging, have been already alluded to in the preceding history of the Poor Laws. Supplementary to such provisions are those of the 43 Eliz., c. 2, and the other poor law statutes; which, when private employment or the industry of the labourer fails, supersede the necessity for begging, by establishing a public fund for setting the able-bodied poor to work.

The 43 Eliz., c. 2, directed the overseers to provide "a convenient stock of flax, hemp, wool, thread, iron, and other necessary ware and stuff, to set the poor on work;" and made no provision whatever for relieving the able-bodied without employing them. Nevertheless, the salutary principle of this measure was in the course of time so far forgotten and neglected, that it eventually became the general rule, not only to give relief without requiring work at all, but even to exceed the liberality of the statute towards the aged and helpless, by relieving the able-bodied in money, to be spent at their own discretion. But the evil did not stop there; for the further abuse was ultimately superadded, of paying money out of the poor rates, not merely to such as were out of work, but even to those who were in private employment; such "relief in aid of wages" being, in fact, a mode of assisting the employers of labour, instead of the labourers themselves.\*

The 52nd section of the 4 and 5 Will. IV., c. 76 (1834) recites: "And whereas a practice has obtained of giving relief to persons or their

\* For a complete detail of the evils of the allowance system, see the Report of the Commissioners of Inquiry, 1834.

families who, at the time of applying for or receiving such relief, were wholly or partially in the employment of individuals, and the relief of the able-bodied and their families is in many places administered in modes productive of evil in other respects: And whereas difficulty may arise in case any immediate and universal remedy is attempted to be applied in the matters aforesaid." It then confers on the Poor Law Commissioners power "to declare to what extent, and for what period, the relief to be given to able-bodied persons or to their families in any particular parish or union may be administered out of the workhouse of such parish or union, by payments in money, or with food or clothing in kind, or partly in kind and partly in money, and in what proportions, to what persons or class of persons, at what times and places, on what conditions, and in what manner, such out-door relief may be afforded."\* All relief given contrary to such regulations is declared illegal, and is to be disallowed in the accounts of the person giving it. Exceptions, however, are made for cases where special and unforeseen circumstances may render the immediate operation of the regulations inconvenient or dangerous.

It will be observed that this enactment does not at once abolish all out-door relief to the able-bodied, nor does it even require such abolition at any future time; but it entrusts to a central authority the power of restricting and regulating such relief, so as to prevent the continuance or recurrence of the evils which the previous practices had engendered. The Poor Law Commissioners, in exercising this power, have issued a General Order (dated 21st December, 1844,) directing that, in the unions and parishes to which the order applies, the able-bodied poor and their families shall be relieved wholly in the workhouse, but exempting from its operation certain classes of cases, and providing that the guardians may depart from its regulations in any special instance, subject to the subsequent approval of the Commissioners. The excepted cases are those of persons requiring relief on account of sudden and urgent necessity, or on account of sickness, accident, or bodily or mental infirmity affecting such person or any of his or her family, or on account of the burial of any of his or her family; those of widows under certain circumstances; and those of the families of prisoners—soldiers, sailors, and marines—and other persons residing out of the union away from such families.

By the same statute, effective means are placed at the disposal of the Commissioners for the government of workhouses, for the regulation of the nature and amount of the relief to be afforded to and the labour to be exacted from the inmates, and for the preservation of good order within them. The Commissioners, by a General Order of 5th February, 1842, have laid down certain rules and regulations for this purpose, prescribing the course to be pursued with regard to the admission of paupers, their classification, diet, discipline, and punish-

\* This is one of not a few clauses in this Act that are opposed alike to principle and common sense. Why vest such a power in the hands of the Commissioners? Why not return to the sound principle embodied in the 9 Geo. I., c. 7, and permit the parochial authorities to give relief in workhouses or elsewhere, as they may think best? Are they not likely to be better informed upon such matters, and have they not an incomparably greater interest in the proper administration of the affairs of the poor than the Commissioners?

ment, pointing out the specific duties of the several officers, and so forth.

Such are the principal provisions of the law relating to the relief of the able-bodied poor. In noticing the class of "Casual poor," *i. e.*, persons overtaken in a parish where they are neither resident nor legally settled, by some sudden and urgent necessity, which compels them to seek for temporary relief, it may be observed generally that they must be relieved wheresoever they meet with the casualty, or lie sick in consequence. The Poor Law Amendment Act of 1834, s. 54, which deprives overseers, where select vestries or Boards of Guardians exist, of their general authority as to granting relief, still obliges them to afford such temporary relief in articles of necessity, but not in money, as may be required in sudden and urgent cases, and subjects them to penalties if they refuse to do so when ordered by a justice of the peace; moreover, they are indictable for such neglect. And it has been held that a medical man is entitled to receive the costs of attending and supplying medicines to poor persons, suffering from sudden illness or accident, where the officers of the parish fail to provide the requisite medical relief.

Besides those who are overtaken by illness or accident, there is another description of persons falling under the designation of "Casual poor;" vagrants, mendicants, wayfarers, tramps, and others, who from various causes may stand in need of immediate and temporary relief, in parishes where they are neither resident nor settled. We have already seen how largely the earlier statutes were occupied with that very troublesome body, the "valiant beggars" and "sturdy vagabonds;" and the difficulty of dealing with them effectually and judiciously seems rather to have increased than diminished with the course of time. The last penal statute relating to vagrants was the 5 Geo. IV., c. 83, which is still in force. We are now concerned, however, with their relief, rather than their punishment. The Act of 1842, for the further amendment of the Poor Laws (5 and 6 Vict., c. 57, s. 5) enabled the guardians to prescribe a task of work to be performed by such paupers, in return for the food and lodging afforded them in the workhouse; and to detain them for its performance for any time not exceeding four hours from the hour of breakfast in the morning after their admission. This enactment also provides for their punishment, in case of refusal to work, as well as in case of certain other disorderly and mischievous proceedings.

The general order for the government of workhouses, already mentioned as issued by the Poor Law Commissioners in 1842, requires this class of paupers to be kept in a separate ward, and to be dieted and set to work according to the regulations of the guardians, approved by the Commissioners. The continued augmentation of the evil, however, and the correspondingly increased difficulty of meeting it by means of the workhouse, especially in the larger towns, induced the legislature, in 1844, to give authority to the Poor Law Commissioners, to form districts of unions and parishes in the metropolis, and certain other cities, "for the purpose of providing and managing asylums for the temporary relief and setting to work therein of destitute houseless poor, who are not charged with any offence, and who may apply for relief,

or become chargeable to the poor rates within any such parish or union." But in consequence of an investigation made last session by a select Committee of the House of Commons, into the expediency of such asylums, their establishment is at present in abeyance.

Before closing this account of the classes of paupers, and the modes of relief, notice should be taken of the liabilities of the recipients of relief, or other persons on their behalf, for the reimbursement of the parish, or otherwise. Under the 43 Eliz. c. 2. s. 7, grand-parents are liable, according to their ability, to support their grandchildren, parents their children, and children their parents; the amount of contribution in each case to be assessed by the justices. Under the 4 and 5 Wm. IV. c. 76, s. 56, parents are liable for all relief to their dependent children, as if it were administered to themselves; and under s. 57, every man marrying after the passing of the Act, is bound to maintain all his step-children, whether legitimate or illegitimate, until their mother dies, or they attain the age of 16. By s. 71, relief to any bastard child born after the passing of the Act is made, in law, relief to the mother herself; and by the 7 and 8 Vict. c. 101, s. 25, it is enacted that, while the husband of any woman is beyond the seas, or in custody of the law, or confined as a lunatic, all relief granted to her or her children, shall be given in the same manner and subject to the same conditions as if she were a widow. Relief given to any person beyond the age of 21 may, under the regulations of the Commissioners, be treated as a loan, whether any receipt or acknowledgment be given for it, or not; and may be recovered, under an order of justices, by attachment of the party's wages in his master's hands (4 and 5 Wm IV. c. 76, ss. 58, 59).

Before the passing of the Act for the further amendment of the Poor Laws in 1844, it was very doubtful how far the expenses of burying deceased poor persons could lawfully be defrayed out of the poor rates, either as relief to any individuals, or otherwise. By the 31st section of that Act (7 and 8 Vict. c. 101), this difficulty was removed, and the guardians, (or where there are no guardians, the overseers) were fully authorized to pay such expenses, including the customary burial fees, in all cases of burials under their direction.

The administrative machinery for carrying the provisions of the law into effect, is scarcely of less importance than the principles of those provisions, inasmuch as the efficacy of the one almost entirely depends upon the working of the other.

Our poor law system was in its origin exclusively, and still remains essentially, parochial. The fund for affording relief is not derived from the national revenues, nor is it obtained by means of county taxation; but it is raised in each parish separately, and expended solely on account of the paupers which each parish is respectively liable to maintain. Each individual parish, therefore, has a direct and exclusive interest in the levy and expenditure of its own particular fund.

Under the statute of Elizabeth, the requisite sums are to be raised "by taxation of every inhabitant, parson, vicar, and other, and of every occupier of lands, houses, tithes impropriate, appropriation of tithes, coal-mines, or saleable underwoods." Inhabitants are at present exempted by a temporary Act, from their liability to be rated in respect

of stock in trade, or other personal property. Consequently, the burden falls upon parsons and vicars, who are rateable in respect of their ability, as derived principally from their tithes; upon the occupiers of lands, houses, coal-mines, and saleable underwoods; and upon the impropiators and appropriators of tithes; personal property of every sort, all mines, except coal-mines, all timber and wood, except saleable underwoods, and indeed all property, but the particular kinds just enumerated, being free from the charge. In some few cases, the owners may be assessed instead of the occupiers. The assessment is to be laid upon the net annual value of the property, as defined in the Parochial Assessments Act (6 and 7 Wm. IV. c. 96); which statute also makes provision for obtaining a professional valuation of the rateable property, in any parish desiring it. The duty of making the assessment rests with the overseers; but protection is afforded to the rate-payers, by the right of appealing against the rate to the justices in special or in quarter sessions. The duty of collecting the rate (payment of which may be enforced by distress and sale of the defaulter's goods, and even by imprisonment) likewise attaches to the overseers; but paid collectors may be appointed by the guardians, with the sanction of the Commissioners, to assist them. The overseers are still bound to perform these functions, even in parishes in union, or under Boards of Guardians, though deprived, in such cases, of their former authority as to the distribution of relief.

The parochial incidence of the burden of relief naturally gave rise to the law of settlement; the "settlement" of a pauper being another word for the liability of a particular parish to support him, if he becomes chargeable within it, and to receive him if he be removed to it on becoming chargeable elsewhere. There is scarcely, perhaps, any branch of our law more complicated in its details than that relating to parish settlements; but it will be sufficient to intimate generally, that, in the present state of the law, a person may become legally settled in a parish by any one of the following modes, viz.: by birth; by parentage; by marriage; by apprenticeship; by renting a tenement; by possession of an estate; and by payment of rates and taxes. Some other modes of acquiring settlements were abolished by the 4 and 5 Wm. IV. c. 76, as to the future; but many such settlements previously gained, no doubt still subsist. In every case, the operative settlement is the one last acquired by the pauper.

Consequent on the liability of a particular parish to maintain a pauper, is the liability of such pauper to be removed to that parish, if he become chargeable in another English parish. Numerous statutes have at various times been passed, authorizing and regulating such removals under orders or warrants of the justices of the peace; and a very large portion of the whole amount of poor law litigation has grown out of the endeavours of contending parishes, either to procure or to defeat the transfer of paupers from the one to the other by means of such orders. When a person becomes chargeable to any parish in which he is resident, he may, if legally settled elsewhere, be removed thither by order of justices, on the complaint of the overseers of the parish to which he is chargeable (13 and 14 Car. II. c. 12; and 35 Geo. III. c. 101, s. 1); but if he is too ill to be safely removed,

the order may be suspended until it can be executed without danger (35 Geo. III. c. 101, s. 2). In the last session of Parliament (1846), an Act (9 and 10 Vict. c. 66) was passed, apparently under the influence of a policy somewhat different from that hitherto adopted; for while former statutes looked almost exclusively to the adjustment of the claims and obligations of the several parishes, the Act alluded to has reference chiefly to the advantage of the paupers, inasmuch as it prohibits their removal under certain circumstances, and consequently, in the cases to which it applies, protects them from the inconveniences which such removals frequently entailed upon them.

Long before the passing of this Act, however, a practice had been extensively adopted, which in some degree moderated the harsh effects of the settlement laws, by saving the paupers from the inconvenience, and the parishes from the expense of removals. This practice consisted in the allowance of relief to a pauper, at the charge of the parish of his settlement, while he was residing elsewhere; which allowance is termed "Non-resident Relief." Such relief is not expressly authorized by any statute, except in certain cases of widows (see 7 and 8 Vict. c. 101, s. 26); but it is recognized and regulated by general orders of the Commissioners, bearing date the 21st December, 1844; by one of which, it is forbidden, except in certain cases; and by the other, its transmission to the paupers, in the cases in which it may be granted, is provided for. Even where it is allowed, however, the parish in which the pauper is residing, is held by the law responsible in the first instance for his due relief.

Before leaving the subject of the separate liabilities of individual parishes, it should be mentioned that parishes may be combined into unions for the purposes of rating and settlement, under the 4 and 5 Will. IV., c. 76, ss. 33-36.

The selection of the "parish" as the territorial division likely to prove the most convenient for the purposes of poor-law administration, was, no doubt, fully justified by the circumstances of the country in Queen Elizabeth's reign. But the changes occurring in the lapse of centuries have rendered some modifications necessary; as the singular and fortuitous variety in the area and population of the several parishes presented obstacles to efficient management, which continually increased with the altered condition of the community. When the statute of Elizabeth was passed, there were apparently about 10,000 parishes; and this number was afterwards virtually augmented to upwards of 15,000, by the operation of the 13 and 14 Car. II., c. 12, which enabled townships, under certain circumstances, to erect themselves into parishes for poor-law purposes. It is shown by the census of 1831, that out of 15,535 parishes and townships separately maintaining their own poor, nearly 6,700 had at that time a population below 300 respectively. In such places, it was obviously impracticable to procure a yearly succession of competent officers, or to provide the means and instruments of systematic administration, without incurring an enormous waste of labour and expense.

The plan of combining parishes into unions or united districts, with a view to economise cost and improve administration, had been partially adopted, at various times and in different places, (under the 9

Geo. I., c. 7, with reference to workhouses, under sundry local Acts, and to a certain extent under Gilbert's Act), before the passing of the Poor-Law Amendment Act of 1834; but the latter statute introduced the system generally, by conferring on the Poor Law Commissioners the power of forming unions of parishes throughout the country, according to the provisions of the Act.

The Commissioners, on forming any such union, are to ascertain the average annual expense incurred by each parish for the relief of the poor, in the three years next preceding the inquiry; and this average, until altered by the Commissioners on a similar investigation at any future time, is to constitute the scale according to which each parish in the union is to contribute to a common fund, for the following purposes:—First, for purchasing, building, or hiring, for altering or enlarging, and for upholding and maintaining, any workhouse or other place for the reception and relief of the poor; secondly, for purchasing or renting any lands or tenements under the Act; thirdly, for paying the several officers of the union; fourthly, for providing utensils and materials for setting the poor to work; and generally, for defraying any other expense incurred for the common benefit of the united parishes. The workhouse thus provided is devoted to the maintenance and employment of the poor of each parish in the union, in the same manner as if it belonged exclusively to each such parish; and the like rule holds as to the claims of the several parishes to the services of the paid officers. But it is expressly provided that “each of the said parishes shall be separately chargeable with, and liable to defray, the expense of its own poor, whether relieved in or out of any such workhouse.” The union, therefore, merely facilitates the attainment of certain common instruments at a common expense; but does not alter or directly affect the liabilities of the respective parishes, as regards the burden of relieving their own poor.

These, then, are the principal districts marked out for the administration of the poor-laws; namely, parishes and townships separately bound to provide the funds for the support of their own poor; and unions of such parishes and townships,\* formed by the Poor Law Commissioners, for the common management of those funds. It should be added, that the Commissioners may place any parish or township under the control of a separate board of guardians, without including it in any union.

The 43rd Eliz., c. 2, s. 1, requires the justices to appoint annually at Easter, four, three, or two substantial householders in every parish, who, together with the churchwardens, shall be the overseers of the poor. The office of overseer is compulsory, and unremunerated; but under Sturges Bourne's Act, (59 Geo. III., c. 12, s. 7,) paid assistant overseers may be appointed by the justices, on the nomination of the vestry; and, as already mentioned, the Poor Law Commissioners may authorize the Boards of Guardians to appoint paid collectors of the poor-rates. (7 and 8 Vict., c. 101.)

The managing body in a union is the Board of Guardians, who supersede the overseers in the administration of relief, and who are

\* The Commissioners may also include in such unions any extra-parochial places which separately maintain their own poor.

elected annually by the owners of property and ratepayers in the several parishes comprised within the union. The Commissioners are to fix the number of guardians to be elected, assigning at least one to each parish; and to determine the qualification of such guardians, so that it shall consist in being rated to the poor-rate within the union on an annual rental not exceeding 40*l*. The Commissioners are also empowered to regulate the mode of conducting the election; which is to be determined by the votes of the owners and ratepayers, given according to a scale laid down in the 7 and 8 Vict. c. 101, s. 14. In addition to the elected guardians, the justices residing in the union and acting for the county, are entitled to act *ex officio* as members of the board.

The guardians, under the control of the Commissioners, may appoint such paid officers as are necessary; whose dismissal, however, is in the power of the Commissioners. The clerk to the guardians takes a leading position in the staff of union officers, as the more immediate organ of the board. The treasurer keeps the money of the guardians, and disburses it according to their orders. The relieving officers are entrusted with the duties of investigating the cases of applicants, reporting thereon to the guardians, supplying the relief ordered by the board, and in urgent cases affording immediate aid on their own responsibility. The chief duties of the medical officers are those connected with medical attendance upon the sick paupers, whether in or out of the workhouse. To the master and matron of the workhouse belong the superintendence of that establishment, under the direction of the guardians, and in accordance with the regulations of the Commissioners; and where a chaplain, schoolmaster and schoolmistress are appointed, the religious consolation of the inmates, and the education of the pauper children, are confided to their care. The porter at the workhouse, though a very subordinate, is by no means an unimportant officer.

Such is a brief outline of the general scheme of administrative machinery in unions and parishes under the Poor Law Amendment Act. In parishes not so governed, the modes of management are very various. The parishes under local Acts, and those under Gilbert's Act, compose, however, the greater number; in the remaining few the administration is still, for the most part, in the hands of the overseers, or perhaps of select vestries constituted under Sturges Bourne's Act.

It would be quite impracticable in this place to notice the various modifications of detail which exist in the numerous local Acts. It would seem, however, that those Acts, passed at different times, in unconnected localities, under dissimilar circumstances, had in view the same objects, of providing for the relief of the poor in workhouses, and of securing a better administration of the law, by substituting a Board of directors, guardians, or similar authorities, with paid subordinates, in lieu of the unpaid annual overseers. In some cases, these Acts apply to single parishes only; in others, they extend to incorporations, or unions of parishes formed under their provisions. It is important to observe that, in all such parishes or incorporations, the general law affecting the relief of the poor prevails in full force, except only in so

far as it is modified by the express terms of the particular local Act. By the 4 and 5 Will. IV., c. 76, s. 21, it is provided that all the powers and authorities given by such local Acts, with reference to workhouses, shall be exercised by the persons authorized by law to do so, under the control of the Poor Law Commissioners; and by s. 29, the Commissioners are empowered to ascertain the average annual expense incurred for the relief of the poor of any incorporation formed under a local Act, for the three years preceding the inquiry, and to fix the proportions of the future contributions of the several parishes to the common fund accordingly. The Commissioners may also direct the election of the guardians, or similar authorities, under any such Act, to be conducted according to the provisions of the 4 and 5 Will. IV., c. 76, and may issue regulations for the government of any workhouse established under any such Act (ss. 41 and 42). The 64th section of the 7 and 8 Vict., c. 101, contains some enactments for regulating the proceedings of guardians, &c. under local Acts, of which the principal one appears to be, that, in all matters concerning the relief of the poor, they shall act as a Board, and not individually; and it also introduces a proviso, which renders it necessary for the Commissioners to obtain the consent of two-thirds of the guardians, to enable them to include, in a union with other parishes, any parish governed under a local Act, and having a population of more than 20,000. It had been previously decided by the Courts, that the Commissioners had power to include any parish so governed, in union with others; though not to supersede a Board of Guardians, &c. constituted under any such Act, by another Board elected under their orders, in a single parish. The Commissioners may dissolve any incorporation formed under a local Act, with the consent of two-thirds of the guardians. The Commissioners have exercised the several powers just mentioned, with regard to many of the parishes and incorporations under local Acts; but there are some such parishes and incorporations with which they have interfered very little, if at all.

Any two or more parishes might adopt the provisions of Gilbert's Act (22 Geo. III., c. 83), by consent of two-thirds in number and value of the owners and occupiers; and upon the union being formally completed, the justices are to appoint annually, from persons nominated by the owners and occupiers, a guardian for each parish; who may receive a salary. These guardians supersede the overseers in the care and management of the poor; but the latter retain their powers and duties in respect to the assessment and collection of the poor rates. The justices may also appoint, on the nomination of the guardians, a supervising officer, termed a "Visitor;" who is invested with authority to superintend the workhouse, and to exercise a general control over the affairs of the union. The provisions of the Act might, moreover, be adopted by single parishes, so far as they were applicable. The principal provisions of this statute, as regards the relief of the poor, have already been adverted to, in sketching the history of the poor laws; it remains to add that the mistaken policy of confining the workhouse to the impotent poor was in some degree corrected by the Poor Law Amendment Act of 1834, which repealed (s. 31) so much of Gilbert's Act as limited the class or description of persons to be

sent to the workhouse. It is matter of question, also, whether the very exceptionable clause imposing upon the guardians the duty of finding private employment for the able-bodied, had not previously been repealed by the indirect operation of the 56 Geo. III., c. 129. The powers of control and interference possessed by the Poor Law Commissioners, with regard to parishes and unions under Gilbert's Act, are indicated in several sections of the 4 and 5 Will. IV., c. 76. By ss. 21 and 22, and s. 42, the Commissioners are empowered to interfere with relation to the workhouses; by s. 29, to take fresh averages, and re-adjust the proportions of the parochial contributions to the common funds accordingly; by s. 32, to dissolve any Gilbert Union, wholly or partially, with the consent of two-thirds of the guardians; and by s. 41, to regulate the mode of conducting the election of guardians. The 37th section, moreover, provides that no such union shall thereafter be formed without the Commissioners' consent.

Many of the Gilbert Unions have been dissolved under s. 32; but some are yet remaining. The Commissioners have been enabled to issue regulations to places under local Acts, because the constitution and powers of the Board of Guardians, or like authorities, are usually very similar to those of the guardians under the Poor Law Amendment Act. But the functions of the guardians under Gilbert's Act being such as to prevent their acting effectually as a Board (each guardian being merely an overseer under another name), it has apparently not been practicable for the Commissioners to deal with the Gilbert Unions as they have done with the Local Act Incorporations.

We have seen that, at the first institution of the poor laws, the power of control over the administrative officers was vested in the Justices of the Peace. Though their authority in these matters has been greatly curtailed by the Poor Law Amendment Act and subsequent statutes, they are still entrusted with some powers and duties, more or less important, according as they are judicial or ministerial. They may order relief granted to the aged and infirm, to be given out of the workhouse; they may require the overseers to afford necessary aid in urgent cases; they appoint the overseers and assistant overseers; they are required to signify their allowance of the poor rates, which are not valid without their confirmation; they decide the appeals against such rates; and in various cases, such as the removal of paupers and the levy of the rates, their warrants or orders are indispensable. In performing these functions, the justices sometimes act as individuals at their own residences; sometimes in districts or divisions of petty sessions, formed for convenience in transacting such business as requires the concurrence of two justices; and sometimes in quarter sessions.

Until lately, too, the justices were entrusted with authority to audit the overseers' accounts; but this power has been taken away from them by the 7 and 8 Vict., c. 101, wherever district auditors are appointed. Under that statute, the Poor Law Commissioners are empowered to form all Unions and parishes (except certain places having auditors under 1 and 2 Will. IV., c. 60, or under Local Acts) into districts for the audit of accounts; the auditor for each district to be elected by the votes of the chairman and vice-chairmen of the several Boards

of Guardians acting within it, or, as to places where there are no guardians, of two of the overseers. Ample powers are conferred upon the district auditors by the statute, both as to the audit of the accounts of the several unions and parish officers, and as to the recovery of the balances they may find to be due thereon; while, on the other hand, special provision is made for appeals against their decisions, either to the Poor Law Commissioners, or to the Court of Queen's Bench, at the option of the appellant. The statute further provides for a similar system of control, by means of district auditors, in the case of districts formed under the Act, for pauper schools, and for asylums for the houseless poor.

But the chief authority for exercising general control over the administration of the law, is the central Board of Poor Law Commissioners, constituted under the provisions of the Poor Law Amendment Act of 1834. The institution of this central superintending power may, perhaps, be deemed the most distinguishing feature of that important measure. The exaction of work from the able-bodied in return for relief, was a principle of administration as old as the statute of Elizabeth; the application of that principle by means of workhouses, dates at least from the reign of Charles the Second; even the plan of parochial Unions, managed by Boards of Guardians with paid officers, had been adopted long before; and in fact, it may be said that the only element really new, introduced into the administration of the poor laws by the Act of 1834, was that of central control.

Originally, when their powers were confined to England and Wales, the number of Poor Law Commissioners was limited to three; but afterwards, when the task of introducing the poor law into Ireland was entrusted to their care, the Crown was empowered to appoint a fourth Commissioner. They are appointed by warrant under the royal sign manual; and are removable at the pleasure of the Crown. To aid them in the discharge of their extensive duties, they are enabled to appoint, and remove at their discretion, nine Assistant Commissioners in England and Wales (and additional ones on special occasions), with the necessary staff of secretaries, clerks, and other officers. None of the Commissioners or Assistant Commissioners can sit as a member of the House of Commons while he holds his appointment. The duration of the Commission was in the first instance restricted to five years; but it was subsequently renewed by several temporary Acts, the last of which (5 and 6 Vict. c. 57,) authorised its continuance "until the 31st day of July, in the year 1847, and thenceforth until the end of the then next session of Parliament."

The Commissioners are appointed to direct and control the administration of relief to the poor, according to the laws in force at the time being. For this purpose, they are to sit as a Board, and two of them are sufficient to constitute a Board; and they may delegate, with the consent of one of the principal Secretaries of State, all their powers, except that of making general rules, to one alone.

They are invested with ample powers to make inquiries connected with the relief of the poor, and to compel answers and returns.

They are authorised to make and issue such rules, orders, and regulations, as they think fit, for carrying the law into execution; which

rules, &c., when issued in compliance with certain formalities, are valid, and remain in full force, unless and until they are quashed by the Court of Queen's Bench. Among other things, they may determine the kind and quantity of relief to be given to the various classes of poor, especially the able-bodied, (though they are expressly restrained from ordering relief in any individual case); they may regulate the apprenticeship and education of pauper children; they may form, dissolve, and reconstruct unions of parishes; they may issue orders for providing, and establish rules for governing workhouses; they may determine the qualifications and regulate the election of guardians; they may direct the appointment, and order the dismissal, of paid officers subordinate to the Boards of Guardians; they may authorise new valuations of the rateable property to be made in parishes requiring that advantage; they may regulate the keeping and auditing of the union and parish accounts; and generally, they may control all guardians, overseers, and other persons exercising any powers in any way relating to the relief of the poor. Their summonses and orders are enforced by penalties provided in case of neglect or disobedience.

For the due exercise of these extensive powers of inquiry, control, and subordinate legislation, the Commissioners are immediately responsible to the Crown; and of course, indirectly, to parliament. Their general rules and orders (*i. e.* rules and orders applicable to several unions, or to several parishes not in union and not to be united by virtue of such orders,) must be sent to one of the Principal Secretaries of State forty days before they take effect; and may, at any time, be disallowed by Her Majesty, with the advice of the Privy Council. And all such rules and orders must be laid before parliament, within one week after the commencement of the session. The Commissioners are likewise bound to give to the Secretary of State, such information respecting their proceedings, or any part of them, as he may from time to time require. They are also directed to make a record of their proceedings, which shall be submitted to the Secretary of State once in every year, or as often as he shall require the same; and they are further to submit to him, once in every year, a general report of their proceedings, which must be forthwith laid by him before both houses of parliament.

The Commissioners, moreover, are subject to the control of the Court of Queen's Bench, in the matter of the rules, orders, and regulations, which they are authorised to make and issue. These rules, &c., cannot be removed into any other Court; and, as mentioned above, they remain in force until declared illegal by the Queen's Bench, and afford a protection to persons acting under them, until such persons are apprised of their having been so quashed.

The Court of Queen's Bench, it may be further stated, has control over all officers, by means of its writs of *mandamus* and *quo warranto*; by which it can compel the specific performance of duties by officers, or restrain them when they usurp authority. It also obtains jurisdiction in cases before the justices at Quarter Sessions, by means of its writ of *certiorari*, which directs the inferior Court to remove any matter in contest into the superior Court; and also by means of the statement of special cases, where the Court of Quarter Sessions may

desire to obtain the opinion of the Court of Queen's Bench on any points of law, as to which a reasonable doubt is entertained; special verdicts have the same effect. All officers are likewise subject to private action, where any special damage is done to an individual by the improper execution of their office; and also to indictment for misdemeanour, in case of neglect or misfeasance in regard to their official duties. Overseers are thus punishable both for neglecting to give relief where it is necessary, and for giving it where it is unnecessary.

Having now described, as briefly as appeared to be practicable with respect to so complex a matter, the series of changes which have resulted in the existing system of poor law administration, as well as the outline of that system itself, we will proceed to notice the operation of the system as modified by the Poor Law Amendment Act of 1834.

#### *Amended System of 1834.*

The 4 and 5 Will. IV., c. 76, was passed on the 14th August, 1834; and the first Poor Law Commissioners were appointed under its provisions on the 18th of the same month. The amended system, therefore, has now been in operation upwards of 12 years; and during that time, has been the constant object of public attention, has been discussed and examined in almost every possible point of view, has been attacked and defended in all available modes, in public meetings, in Parliament, and in the press; and perhaps no scheme of social economy, affecting so many interests, has ever been more strictly watched, or more severely tried. We do not propose to enter on the wide field of investigation, which an inquiry into its merits would present; but rather, to recapitulate briefly the more noticeable points of the history of its operation, as indicated in the annual and other reports and publications of the Poor Law Commissioners, in parliamentary documents, and other sources of information.

The earlier labours of the Commissioners were naturally directed to the judicious introduction of the new measure, gradually, but at the same time as quickly as the nature of the case would admit of. The establishment of workhouses, and the formation of parochial unions, speedily engaged their attention; impressed, as they appear to have been, with a conviction of the advantages of management on a large scale, as well as of the obvious economy of providing workhouses for extensive districts, rather than for small ones. (Some of the unions have since been thought to be in some respects too large; and the 5 and 6 Vict., c. 57, s. 7, was passed with a view to obviate any inconveniences that might arise upon that score, by enabling the Board of Guardians, in any such case, to divide itself into district relief committees. Under a more recent Act, (7 and 8 Vict., c. 101, s. 66,) the Commissioners are empowered to diminish, or increase, the number of parishes in any union, as they think fit. Within three years after the appointment of the Commission, a very large proportion of the entire country had been brought under the operation of the measure; and the only exceptions at the present time are those of parishes and incorporations which have not been dissolved under Gilbert's Act, or local Acts, and some few parishes which it has not yet been found

practicable to include in any union. In some instances, principally those of the incorporated hundreds in Norfolk and Suffolk where the previous management was very similar to that introduced generally by the Poor Law Amendment Act, the Commissioners have issued their usual rules for the government of the workhouses, the regulation of relief, and so forth; and the only material difference between such places, and unions constituted by the Commissioners, consists simply in the mode in which the guardians or directors are elected or appointed. They may be considered as virtually on the same footing with unions formed under the Poor Law Amendment Act. The following statement exhibits the numbers of unions and parishes under these various modes of management, at the 1st of October, 1846 :—

|                                                                                                                                        | Number of<br>Unions, &c. | Number of<br>Parishes<br>comprised<br>therein. |
|----------------------------------------------------------------------------------------------------------------------------------------|--------------------------|------------------------------------------------|
| Unions, Incorporations, and single Parishes having separate Boards of Guardians, acting under the Commissioners' regulations . . . . . | 595                      | 13,898                                         |
| Incorporations and single Parishes, under local Acts, with which the Commissioners have interfered little, if at all . . . . .         | 31                       | 234                                            |
| Unions, and single Parishes under Gilbert's Act . . . . .                                                                              | 17                       | 254                                            |
| Other Parishes and places . . . . .                                                                                                    | ..                       | 211                                            |
| Total . . . . .                                                                                                                        | ..                       | 14,597                                         |

The constitution of the Boards of Guardians was the next important point which it became necessary for the Commissioners to deal with. They laid down some regulations as to the mode of conducting the elections of the guardians; under which the votes of the electors were to be given in papers prepared for the purpose, and collected separately at their houses. The duty of conducting the elections was confided, at first, to the overseers of the several parishes; but it has since been entrusted, with great advantage, to the clerks of the unions.

Every Board of Guardians, under the regulations of the Commissioners, elects its own Chairman and Vice-Chairman for the year; and by the 7 and 8 Vict., c. 101, s. 64, the several Boards constituted under local Acts are required to do so likewise. The Guardians usually meet once a-week for the performance of their duties; though in some few cases fortnightly meetings have been found to be sufficient. The total number of Guardians acting under the Commissioners' orders, and the average number in each union or single parish, are as follows :—

| Number of Unions<br>and<br>Single Parishes. | Number of Guardians.     | Average Number for<br>each Union<br>or Single Parish. |
|---------------------------------------------|--------------------------|-------------------------------------------------------|
| 595                                         | Elected . . . . 17,165   | 28·8                                                  |
|                                             | Ex-officio . . . . 4,339 | 7·3                                                   |
|                                             | Total . . . . 21,504     | 36·1                                                  |

The Guardians are unpaid; but their officers receive such remuneration as the Commissioners may approve.

are not paid by fixed salaries are excluded; also Assistant Overseers and Col-  
under the Board's orders.  
of the district Auditors includes remuneration for some parishes not in union.  
difficulties encountered the Commissioners almost at the  
in regard to the arrangements for affording medical relief; and  
years elapsed before they were able to satisfy the medical pro-  
generally, either as to the persons who were to be considered  
to attend the paupers under the terms of the statute, or as  
to the mode and amount of remuneration to be allowed for that im-  
portant duty. In March, 1842, however, the Commissioners issued a  
general order relating to medical relief, apparently having for its ob-  
ject the preservation of a due regard alike for the claims of the sick  
poor, and for the interests of the profession. This order seems to  
have removed the principal difficulties that beset the earlier arrange-  
ments with respect to this matter.

The keeping and auditing of the accounts of the union and parish  
officers is manifestly a subject of much practical importance; and at  
an early stage of their proceedings, the Commissioners prepared an  
extremely full and well-arranged system of books and forms to be used  
by those officers generally; thus securing uniformity as well as com-  
pleteness in both the financial and statistical information registered by  
them. The Commissioners likewise required the Guardians of each union  
to appoint an auditor; but, although the auditors so appointed proved of  
great utility in checking improper expenditure and preventing other ir-  
regularities, there were certain defects necessarily incident to the then state  
of things, which rendered some alterations desirable. Thus the justices  
still retained their authority to examine and allow the overseers' accounts;  
and hence, collisions very frequently occurred between the justices and  
the auditors, with respect to items in those accounts, and the balances  
due thereon. In 1844, the 7 and 8 Vict. c. 101, empowered the Com-  
missioners to form audit districts, as already noticed; and relieved  
the justices from the duty of investigating any accounts audited by the  
district auditors. The Commissioners, immediately on the passing of  
this statute, proceeded to mark out the country into districts accord-

ably; and great advantage has already been found to result from the thus adopted, of gaining for each union the services of a higher of officers, who bring to bear the skill and experience derived acquaintance with the working of the law in extensive localities. In the last session of Parliament, the House of Commons introduced a new and important principle in regard to the incidence of the connected with the relief of the poor, by voting certain sums, out of the public revenue, in aid of the salaries of the medistrict auditors, and schoolmasters and schoolmistresses for the half year ending 31st March, 1837, viz. :—

|                      | £.     |
|----------------------|--------|
| Auditors . . . .     | 6,500  |
| Medical Officers . . | 35,000 |

|                      | <hr/>  |
|                      | 56,500 |

The mode of providing the unions with workhouses, the plans for their structure and internal arrangements, and other details of a similar character connected with these points, claimed early notice. The Commissioners, however, appear to have deemed it advisable to leave a considerable latitude to the discretion of the Guardians on matters of this kind, dependent as they must be, to a great extent, upon local considerations; exercising, nevertheless, a watchful control over every step in the proceedings. The regulation of the internal management of the workhouses necessarily demanded attention as soon as those establishments were ready for occupation. The classification of the inmates, so as not only to preserve general decency and order, but to secure the comfort and consult the welfare of the several descriptions of paupers; the regulation of their diet, so as to attain the double object of furnishing enough for all, adapted to the different wants of each, and at the same time of observing a due relation, both in kind and in quality, to the ordinary food of the independent labourers of the neighbourhood; the provision of religious consolation and instruction, without interfering unduly with the conscientious views or feelings of any individual; the education of the pauper children; the care of the sick; the employment of the able-bodied; these, and a number of other points, called for prompt and yet cautious action on the part of the central authorities. The Commissioners accordingly issued detailed regulations on this subject to the several unions as they were successively formed; and, aided by the wide and minute experience obtained from the practical working of those orders, they framed a set of general rules, which were issued in February, 1842, to most of the unions and separate parishes throughout the country possessed of effective workhouses.

Connected with this subject is the sale of the old workhouses and other property belonging to the several parishes, which has been conducted under the directions of the Commissioners, and has occupied much of their attention. The proceeds of the sale may be applied, at the Commissioners' discretion, to the discharge of outstanding claims against the parish, or in payment of the proportion chargeable on the parish for the cost of the new workhouse, or towards any object

The following statement shows the total number of each class of paid officers in the unions and parishes under the regulations of the Commissioners, with the total amount of their salaries. (*Vote the Commissioners' Twelfth Annual Report*):—

*Notes.*—Officers that are not paid by fixed salaries are excluded; also Assistant Overseers and Collectors not appointed under the Board's orders.

\*.\* The salary of the district Auditors includes remuneration for some parishes not in union.

Serious difficulties encountered the Commissioners almost at the outset, in regard to the arrangements for affording medical relief; and some years elapsed before they were able to satisfy the medical profession generally, either as to the persons who were to be considered as entitled to attend the paupers under the terms of the statute, or as to the mode and amount of remuneration to be allowed for that important duty. In March, 1842, however, the Commissioners issued a general order relating to medical relief, apparently having for its object the preservation of a due regard alike for the claims of the sick poor, and for the interests of the profession. This order seems to have removed the principal difficulties that beset the earlier arrangements with respect to this matter.

The keeping and auditing of the accounts of the union and parish officers is manifestly a subject of much practical importance; and at an early stage of their proceedings, the Commissioners prepared an extremely full and well-arranged system of books and forms to be used by those officers generally; thus securing uniformity as well as completeness in both the financial and statistical information registered by them. The Commissioners likewise required the Guardians of each union to appoint an auditor; but, although the auditors so appointed proved of great utility in checking improper expenditure and preventing other irregularities, there were certain defects necessarily incident to the then state of things, which rendered some alterations desirable. Thus the justices still retained their authority to examine and allow the overseers' accounts; and hence, collisions very frequently occurred between the justices and the auditors, with respect to items in those accounts, and the balances due thereon. In 1844, the 7 and 8 Vict. c. 101, empowered the Commissioners to form audit districts, as already noticed; and relieved the justices from the duty of investigating any accounts audited by the district auditors. The Commissioners, immediately on the passing of this statute, proceeded to mark out the country into districts accord-

ingly; and great advantage has already been found to result from the plan thus adopted, of gaining for each union the services of a higher class of officers, who bring to bear the skill and experience derived from acquaintance with the working of the law in extensive localities.

During the last session of Parliament, the House of Commons introduced a new and important principle in regard to the incidence of the charges connected with the relief of the poor, by voting certain sums, to be paid out of the public revenue, in aid of the salaries of the medical officers, district auditors, and schoolmasters and schoolmistresses in workhouses, for the half year ending 31st March, 1837, viz. :—

|                      | £.     |
|----------------------|--------|
| Auditors . . . .     | 6,500  |
| Medical Officers . . | 35,000 |
| Teachers . . . .     | 15,000 |
|                      | <hr/>  |
|                      | 56,500 |

The mode of providing the unions with workhouses, the plans for their structure and internal arrangements, and other details of a similar character connected with these points, claimed early notice. The Commissioners, however, appear to have deemed it advisable to leave a considerable latitude to the discretion of the Guardians on matters of this kind, dependent as they must be, to a great extent, upon local considerations; exercising, nevertheless, a watchful control over every step in the proceedings. The regulation of the internal management of the workhouses necessarily demanded attention as soon as those establishments were ready for occupation. The classification of the inmates, so as not only to preserve general decency and order, but to secure the comfort and consult the welfare of the several descriptions of paupers; the regulation of their diet, so as to attain the double object of furnishing enough for all, adapted to the different wants of each, and at the same time of observing a due relation, both in kind and in quality, to the ordinary food of the independent labourers of the neighbourhood; the provision of religious consolation and instruction, without interfering unduly with the conscientious views or feelings of any individual; the education of the pauper children; the care of the sick; the employment of the able-bodied; these, and a number of other points, called for prompt and yet cautious action on the part of the central authorities. The Commissioners accordingly issued detailed regulations on this subject to the several unions as they were successively formed; and, aided by the wide and minute experience obtained from the practical working of those orders, they framed a set of general rules, which were issued in February, 1842, to most of the unions and separate parishes throughout the country possessed of effective workhouses.

Connected with this subject is the sale of the old workhouses and other property belonging to the several parishes, which has been conducted under the directions of the Commissioners, and has occupied much of their attention. The proceeds of the sale may be applied, at the Commissioners' discretion, to the discharge of outstanding claims against the parish, or in payment of the proportion chargeable on the parish for the cost of the new workhouse, or towards any object

of permanent benefit to the parish, such, for instance, as the building of a schoolhouse.

The first regulations as to relief, issued by the Commissioners to the Boards of Guardians, before the requisite workhouses were provided, were confined to a gradual substitution of relief in kind for relief in money, and the control of out-door relief in certain other particulars; and to the discontinuance of non-resident relief to the able-bodied. But as effective workhouses successively came into existence, more stringent regulations were promulgated, narrowing the range of non-resident and out-door relief. The general orders relating to these subjects, issued by the Commissioners on 31st December, 1844, while they prohibit, as a general rule, relief out of the workhouse to able-bodied applicants, nevertheless admit of the allowance of such relief, both within and out of the union, in several classes of cases. The subjoined tabular statements, taken from the Commissioners' Twelfth Annual Report, will throw much light on the actual practice with regard to the relief of the able-bodied, and other paupers, both in and out of the workhouse:—

*Expenditure of 585 Unions and Parishes under Boards of Guardians.*

| Years ended Lady-day. | In-Maintenance. | Out-Relief.  | Establishment Charges and Salaries. | Workhouse Loan Repaid. | Other Charges connected with Relief to the Poor. | Total Expenditure for Relief, &c. to the Poor. | Rates per Head of Total on Population. |

*Note.*—An estimate is made for places not in Union under the Poor Law Amendment Act. The above results are obtained from the Union Quarterly Abstracts.

These tables show that, notwithstanding the general introduction of workhouses, and the general adoption of workhouse relief where it is deemed applicable, there is still a large mass of pauperism, to which it has hitherto been found either unadvisable or impracticable to apply that mode of relief. The cost of the out-door relief is nearly four times as much as that of the in-door maintenance; and constitutes more than half the total expenditure connected with relief. The number of out-door paupers bears to the total number of paupers relieved, a proportion of about 85 per cent.; and nearly one-fourth of the number of out-door paupers consists of the able-bodied.

—The attention of the Commissioners appears to have been first prominently drawn to the difficulties connected with the relief of vagrants and other casual poor, in 1837; and as the operation of the Poor-Law Amendment Act was retarded, those difficulties appear to have been rather increased than diminished. The unfitness of the ordinary workhouses for the reception and relief of this class of paupers, at least in the metropolis and other large towns, became continually more apparent. The indisposition sometimes shown by the workhouse officers to admit vagrants at unseasonable hours, when brought by the police or otherwise; their disorderly conduct when admitted; the risk of their introducing into the establishment contagious or infectious disorders; these, and similar inconveniences, noticed by the Commissioners from time to time, suggested the expediency of instituting separate asylums for this class of paupers. In 1844, the establishment of such asylums was authorised by the 7 and 8 Vict. c. 101; but, as already mentioned, the active execution of the statute in this respect is for the present suspended.

The Act of 1834, though it substituted the guardians for the overseers as regards the distribution of relief, left the assessment and collection of the poor-rates in the hands of the latter. The Parochial Assessments Act, 6 and 7 Will. IV., c. 96, (passed in 1836,) empowered the Commissioners to order new valuations to be made of the rateable property in any parish, on its necessity being represented to them by the guardians or the overseers. Orders of this kind have been issued in upwards of 5,000 cases; but unfortunately the valuations, when made, are not binding on the overseers, and often therefore prove as useless as they are expensive. The Commissioners have devoted much attention to the law of rating, and have extended their inquiries to the various other rates, the assessing and levying of which are intimately associated with the poor-rates.\* It is manifest that much sim-

\* See their Report on Local Taxation, 1843; and a treatise on "The Local Taxes of the United Kingdom," published under their direction in 1846.

plication and improvement might be advantageously introduced into this department of the law.

Some beneficial alterations were made by the 4 and 5 Will. IV., c. 76, in the law relating to the settlement and removal of paupers; and the general operation of that Act has tended, in various ways, greatly to reduce the number of such removals, the expenses incurred in connexion with them, and the amount of litigation attendant upon them. Among other causes, the existence of the Union machinery, and the readily-accessible advice of the Poor Law Commissioners on points of legal or practical difficulty, have largely aided in promoting this result. It appears that in 1834 the number of appeals against orders of removal entered at sessions was 2407; the number actually adjudicated, 1438; in 1835 the numbers entered and adjudicated were respectively 1085 and 793; and in 1841 the number adjudicated in 485 Unions was 575, from which the number for the whole country may be estimated at 805. The sum expended from the poor rates for law charges (the greater part being connected with settlements and removals) amounted to 258,604*l.* in 1834; while in 1844 it was only 105,304*l.* The Act of last session, 9 and 10 Vict., c. 66, will probably have the effect of further diminishing the number of removals, and of course the expenditure arising out of them.

In turning their earnest attention to the important subject of the education of pauper children, the Commissioners appear to have been at an early period convinced of the expediency of establishing district schools for such children. The unfitness of the ordinary workhouses, as engendering habits of pauperism and diffusing moral contamination among the younger inmates; and the impracticability in most cases of obtaining efficient schoolmasters and mistresses at the remuneration which the guardians of separate unions or parishes may be disposed to give, will readily be recognized as influential arguments in favour of district establishments for the training of pauper children. In accordance with these views, the Commissioners took advantage of the existence of Mr. Aubin's establishment at Norwood, for "farming" poor children belonging to the London parishes, under the 7 Geo. III., c. 39; and devoted especial care to the improvement of its general management and detailed arrangements, so as to render it, as far as it might be capable of becoming so, an exemplary institution of the kind, and to a certain extent also a normal school for the training of persons designing to become teachers in workhouses.\* It has been mentioned that in 1844 the Legislature authorized the establishment of district schools, under certain enactments in the 7 and 8 Vict., c. 101; but the limitations, by which the proceedings to be taken under the statute were surrounded, have unfortunately operated to prevent the attainment of its objects, and nothing has been done in consequence.

In addition to the various matters, directly connected with the relief of the poor, which fall within the province of the Commissioners, there are certain other subjects, having a collateral bearing on the more immediate object of the Poor Laws, with which the Commissioners have been more or less concerned.

\* It would not be right to quit this subject without making honourable mention of the training school established at Battersea by Dr. Kay (now Mr. Kay Shuttleworth) and Mr. Tufnell, in furtherance of similar objects; for an account of which see the Commissioners' Report on the Training of Pauper Children, 1840.

The 62nd section of the 4 and 5 Will. IV., c. 76, enables the owners of property and rate-payers in any parish to raise money on the security of the poor rates, for aiding, under the orders of the Commissioners, the emigration of poor persons settled in such parish. The Commissioners have been much occupied with the control and management of such emigration.\*

Those circumstances in the habits, the modes of living, and the general condition of the poorer classes, which in their immediate or ultimate consequences lead to destitution, and thence to pauperism, have obviously a very near relation to the administration of relief. Among the foremost of those circumstances are the state of the dwellings of the poor, and the physical condition of the surrounding neighbourhood, in regard to ventilation, drainage, and other similar points; the neglect of which so frequently results, especially in crowded and unfavourable districts, in the spread of fever and other diseases, and the consequent increase of destitution. The notice of the Commissioners was especially called to this subject, in 1838, with reference to the poor and densely-peopled parts of the metropolis; and in the following year they received instructions from Lord John Russell (then Secretary of State for the Home Department) to institute inquiries throughout England and Wales (which inquiries were afterwards extended to Scotland) as to the extent to which such causes of disease prevailed. On the 9th July, 1842, they presented a report of the results of their inquiries, prepared, under their direction, by their secretary, Mr. Chadwick. It is unnecessary in this place to enlarge upon the importance of an investigation, the subject of which has since attracted a large share of public attention; though we may express a hope that it will eventually lead to the adoption of measures fitted to remove the sources of suffering amongst the poor, in so far as that suffering springs from physical conditions which parliament may be able to modify or control. The Act of last session, 9 and 10 Vict., c. 96, which provides for the prompt removal of certain nuisances, at the cost of the poor rates, is a step in the right direction.

In the year 1840, an Act (3 and 4 Vict. c. 29) was passed, "to extend the practice of vaccination;" which enables the guardians, or where there are no guardians, the overseers, to contract, under the regulations of the Commissioners, with their medical officers or other medical practitioners, for the vaccination of all persons resident in their unions or parishes respectively; and the 4 and 5 Vict. c. 32, expressly provides for the payment of the expenses from the poor rates. The provisions of these statutes have been carried into effect by the guardians and overseers, under the superintendence of the Commissioners, throughout the country, with the exception of very few places. The total amount paid to the vaccinators during the year ended 25th March, 1845, was 25,905*l.*; the numbers vaccinated in the years ended respectively, 29th September, 1844 and 1845, are set forth in the table subjoined:—

\* It may be mentioned also that, at one time, the Commissioners gave their aid in facilitating the migration of labourers from parts of the country which appeared to be overstocked to districts (chiefly manufacturing) where a demand for additional hands prevailed.

| Years. | Number of Unions and Parishes. | Number of Persons Vaccinated. | Number of Persons successfully Vaccinated. | Number of Registered Births. | Ratio of Persons Vaccinated to the Number of Births. | Ratio of Persons successfully Vaccinated to the Number of Births. |
|--------|--------------------------------|-------------------------------|--------------------------------------------|------------------------------|------------------------------------------------------|-------------------------------------------------------------------|
| 1844   | 542                            | 290,458                       | 278,192                                    | 452,825                      | 100 in 156                                           | 100 in 162                                                        |
| 1845   | 560                            | 262,067                       | 247,765                                    | 464,624                      | 100 in 134                                           | 100 in 140                                                        |

The Acts for the registration of births, deaths, and marriages, are to a certain extent carried into effect by means of the poor law administrative machinery, and the local expenses are defrayed from the poor rates; but as they do not otherwise affect the subject matter of the present treatise, they need not be further adverted to.

From this hasty review, some notion may be formed of the multiplicity, variety, and importance of the objects which come within the scope of poor law administration; of the duties devolving upon the numerous body of officers, paid and unpaid, who are entrusted with the actual execution of the law; and of the powers and functions of that central authority, which stands between the legislature and the local administrators, to secure the more effectual attainment of the objects contemplated by the former, and to control, direct, and guide, with the light of their larger experience, the arduous labours of the latter.

Having thus briefly noticed what has been done in carrying out the amended system, it may be expected that we should allude to the effects it has produced. But the consequences, direct and indirect, immediate and remote, of so large and complex a measure, are not easily estimated; especially when the very principles of that measure, and its consequences too, are not merely matters of opinion, but of sentiment as well. We shall therefore content ourselves with laying before the reader, such statistical data as may help him to form his own conclusions upon this interesting problem; observing simply, that we cannot conceive any one to be now desirous of returning to the abuses of the old system, whatever may be his opinion of either the theory or the practice of the existing mode of administration.

The following table presents a statement, showing the total amount levied by way of poor rate in England and Wales, and expended under the specified heads, in each year, from the earliest period for which authentic Parliamentary Returns have been received, to the year 1823, inclusive:—

| Years ended Lady-day. | Total Money Levied for Poor Rates and County Rates. | Expended for the Relief and Maintenance of the Poor. | Expended in Law, Removals, &c. | Expended for County Rate. | Expended for all other Purposes. | Total Parochial Rates Expended. | Ratio per Cent. of Increase or Decrease on Expenditure for Relief, &c. to the Poor in each Year compared with the preceding. | Average Prices of Wheat per Quarter. |

\* Under this head is included In-door and Out-door Relief, Establishment Charges, and, since the passing of the Poor Law Amendment Act, in addition thereto, Building and Emigration Loans repaid, and interest on Money borrowed under Poor Law Amendment Act.

† The year in which the expenditure for relief, &c., to the poor was at the minimum.

‡ Including in this and the following years expenses incurred under the Registration and Parochial Assessment Acts.

§ In this and the following years the expense incurred in removal of paupers is included under the head of "Other Purposes."

|| Including in this and subsequent years expenses incurred under the Vaccination Extension Act.

*Total Amount of Money Levied and Expended under the following heads in England and Wales during the Eleven Years prior and the Eleven Years subsequent to the passing of the Poor Law Amendment Act.*

| Years.             | Amount of Money Levied. | Amount of Money Expended in Relief of Poor. | Expenditure in Law Charges, Removals, &c. | Expenditure for County Rate. | Expended for all other Purposes. | Total Parochial Rates Expended. |

\* Total of two years only.

Note.—The amount expended for law charges, &c., was not distinguished until 1838, previous to which time the expenditure under that head was included partly with relief, &c., to the poor, and partly under the head of other purposes.

The statement previously given (*ante*, p. 424) in the article on Local Taxation, furnishes an indication of the proportions in which the burden of the poor rates falls upon different classes of property.

The tables which follow, will show the amount of pauperism at present prevailing in the country, together with the proportions of the various classes of paupers.

## No. 1.

| COUNTIES.                                   | Population in 1841. | Number of Paupers relieved in 365 Unions. |           |         |          |           |           | Proportions per Cent. of Total Number of Paupers relieved to Population, in 1841. |

| August, 1844 | ..        | ..    | ..     | ..      | ..    | ..     | 9,127                                | 3,628                                           | 2,580                         |

There do not seem to be any means of ascertaining with accuracy, for the purposes of comparison, the numbers of paupers relieved before 1834; but the tables now given will serve as indexes to the actual state and extent of pauperism at the latest periods, with respect to which such information has been published.

SECT. 3. *Poor Laws of Scotland.*

The laws relating to the support of the poor in Scotland originated, like those in most other countries, in attempts to check the prevalence of mendicity. The earliest Act of the Scotch parliament, having reference to the poor, was passed in 1424. It prohibits all persons from begging, between the ages of fourteen and seventy, who should not be furnished with a pass from the proper authorities; and it further orders all other poor persons to betake themselves to some species of useful industry, under penalty of burning on the cheek and banishment. The provisions of this Act were reinforced by succeeding statutes (1503, cap. 70.; 1535, cap. 22); but from 1424 down to 1579, the *impotent poor* had no legal claim to any sort of relief, except that of authorised mendicity; and if the claims of the *able-bodied* poor to relief during this period were brought under discussion, they certainly were not recognised.

In 1579, the Scotch parliament passed the celebrated statute, 12 Jac. 6, cap. 74, which forms the basis of the existing code of poor laws. This statute is, in several parts, literally copied from an English statute, the 14th of Elizabeth, cap. 5, passed about seven years previously. It introduced, for the first time, the principle of compulsory assessment into Scotland; but with the important limitation, that it confines all legal title to relief to poor, aged, and impotent persons; while it directs that all "idle and lazy vagabonds," including all "common labourers, being *personnes able in body*, living idle, and fleeing labour," shall be punished as vagrants and vagabonds, and that a fine shall be imposed on every one harbouring such persons, or giving them alms. There is not a word said in the statute about providing work for any unemployed person, though this forms a prominent topic in the English Act of the 14th of Elizabeth; and it seems plainly to have been intended to provide merely for the support of such poor impotent persons as had previously been without any means of subsistence other than what they derived from begging. Besides its directions as to the treatment of vagabonds and sturdy beggars, it prescribes the proceedings to be adopted with respect to runaway ser-

vants, the mode of passing soldiers and seamen to their respective parishes, the regulation of hospitals, the mode of taxing (stenting) the inhabitants for the objects of the Act, the appointment of overseers, collectors, &c.

Some of the later Scotch Acts, and some of the proclamations that were issued in the reign of William III., contain provisions that have been supposed by some to require that work should be provided for the able-bodied poor. But any such interpretation is plainly inconsistent with the principles laid down in the statute of 1579. "The statutes referred to," says Mr. Monypenny, "sufficiently establish that the impotent poor, who are to be enrolled in the parish lists, in order that their wants may be regularly supplied, and for whom an assessment must, if necessary, be imposed, are only such as are *disabled from procuring a living by their own labour*, either by old age, or by some permanent bodily infirmity or mental incapacity, and who have neither separate means nor any relations who are bound and able to support them. The whole tenor and declared object of the statutes concur, with the particular expressions now pointed out, in proving that such is the prescribed and limited operation of the Scotch poor-laws. It is scarcely necessary to remark, that no countenance is given to the idea that, in any case whatever, the wages of labour may be made up out of the poor-rates. All such difficulties, whenever they occur in the country, must be surmounted by other expedients."—See *Monypenny's* (late Judge of the Court of Session) *Treatise on the Scotch Poor Laws*, p. 27.

The truth is, that the circumstances of the country when the Acts now referred to were passed, were such as to make it quite unnecessary to organise any provision for the relief of the able-bodied poor. Scotland was then wholly destitute of manufactures; and the agricultural labourers were almost all engaged for a year or thereby, the greater part of their wages consisting of articles of provision. In such a state of society able-bodied paupers could hardly exist, and it would, consequently, have been superfluous to provide for them. Labourers were hardly ever out of employment; and public charity might be safely left to guard against an evil of such rare occurrence, and so limited in point of extent.

The principle of providing only for the impotent poor led, in practice, to the important distinction that exists in Scotland between the *regular* and the *occasional* poor. "Those of the first class," to use the words of the late Rev. Sir H. Moncreiff, "receive a constant supply from the parish funds; those of the second are only assisted when they are laid aside from work, by sickness or accidental causes, and especially during that season of the year which chiefly affects their health, or suspends their usual labours. They receive at that time such assistance as their immediate necessities demand, for the limited period when they are in this situation; but when the cause which occasioned the demand ceases to operate, the parish assistance is withdrawn, and they return to their labour, under a conviction, which they never relinquish, that both their subsistence and their comfort must ultimately depend on their personal industry."

But though it was generally supposed to be clear law, that the occa-

sional poor could not insist on being supported by compulsory means, a decision of the Court of Session was opposed to this doctrine. In 1804, certain able-bodied individuals, perfectly competent to earn a subsistence by labour, but who were involved, by accidental circumstances, in temporary distress, applied for relief to the heritors (proprietors) and kirk-session of the parish to which they belonged. A majority agreed to relieve their wants by an extraordinary assessment; but the minority appealed to the Court of Session against this decision, contending that the heritors and session had no power to make an assessment for such a purpose. The court overruled the objection, but only by the narrowest majority, some of the ablest judges being at the same time in the minority. The question has not been agitated since, which shows that the practice has made no way; and it seemed to be the concurrent opinion of those best entitled to decide upon such a point, that if a case of the same sort had been again brought before the court, the former decision would not have been repeated.

But though, as already seen, this system was sufficiently well suited to the circumstances under which it originated, it is altogether unsuited to those of the present day. Scotland has now many large and populous towns, very extensive manufactures, and a large agricultural population employed only from day to day. In such a state of things great numbers of able-bodied persons are occasionally reduced, without any fault of their own, to a state of pauperism; and we have already seen (*ante*, p. 626, &c.), that it is sound policy to provide a resource by compulsory means on which such persons may fall back in periods of distress. Some such resource must, in fact, be provided one way or other, and it is best when it is done by an assessment falling generally on all sorts of property.

We regret, however, to have to state that the late statute, the 8 and 9 Vict., c. 83, has not in this respect placed the law on a satisfactory footing. It declares that from and after the passing of the Act, all assessments levied for the relief of the poor shall "extend and be applicable to the relief of occasional as well as permanent poor; provided always that nothing herein contained shall be held to confer a right to demand relief on able-bodied persons out of employment," (s. 68). We understand this to mean that the parochial authorities *may* relieve able-bodied persons; but that the latter cannot demand such relief as a right. A discretion of this sort is, however, very liable to be abused, and had better, we think, be done away with.

Having thus ascertained the class of persons entitled to support from the poors' funds, we have next to inquire into the amount of the provision allowed to each. This, though an important point, will not detain us long.

A good deal of the abuse of the poor laws of England, subsequently to 1780, originated in the too lavish allowances made to paupers, which, indeed, were often such as to place them in a better situation than independent labourers. But such abuses have been unknown in Scotland. The statute of 1579, ordered that "inquisition," or inquiry, should be made into the circumstances of every poor person claiming relief, to learn how much would enable him or her to "*live unbeggand*."

An inquiry of this sort into the means and condition of each individual claiming relief has always been rigorously enforced; and this, whether the relief sought for were to be made through an assessment, or from the sums collected at the church doors, and other voluntary sources. The object in view has uniformly been so to eke out or assist the separate means of the pauper, supposing he has any, that he may not be reduced to the necessity of begging. And it is really surprising what a small pittance has generally sufficed for this purpose, economy having been forced upon the paupers as well by the habits of the people as by the scantiness of the provision made for them. Sometimes not more than a few shillings a-year have been given, and rarely more than 3*l.* or 4*l.* In fact it does not often happen in Scotland, that *total maintenance* is supplied to any pauper, unless he be a lunatic, or blind, or has been all his life absolutely impotent, and is without relations able to render him any support. The parish funds are not destined to supplant, but to aid individual means and charity; and the allowance, even when largest, has always been regulated by a low standard.

But economy is not the only thing to be attended to in dealing with the poor; and there can be no manner of doubt that it has been carried in many parts of Scotland to an extreme, or rather, we should say, to a revolting excess. The statements in Dr. Alison's valuable tracts, and in other publications of authority, have set this abuse in the clearest light, and have disclosed a state of suffering on the part of the aged and impotent poor which, had it been generally known, would have been disgraceful to the national character. The strong feeling occasioned by these disclosures led to the passing of the 8 and 9 Vict., c. 83; which, though in many respects defective, has, no doubt, improved the treatment of the poor.

The grand difference between the poor laws of Scotland and England consists in the different parties to whom the administration of the affairs of the poor is intrusted.

The execution of the Act of 1579, in country parishes, was committed to those who should be constituted justices of the peace, there not being any such functionaries at that time in Scotland. In consequence, it became necessary to provide other instruments for carrying its provisions into effect; which was done by the Acts of 1592, cap. 149; 1600, cap. 19; and 1663, cap. 16. These Acts committed the management of all matters relating to the poor, such as the imposing of assessments, the admitting of claimants to the roll, the distribution of collections, &c. jointly to the heritors and kirk-sessions in country parishes, and to the magistrates in royal burghs. Some doubts that had occurred as to the limits and legal extent of the control that may be exercised by the landlords over the proceedings of the kirk-sessions were finally put to rest by a decision of the Court of Session in 1751, in the case of the parish of Humber. The court decided (we quote the words of the judgment) "that the heritors have a joint right and power with the kirk-session, in the administration, management, and distribution of all and every of the funds belonging to the poor of the parish, as well collections, as sums mortified (placed in mortmain), for the use of the poor, and lent out

upon interest ; and have a right to be present and join with the session in their administration, distribution, and employment of such sums ; without prejudice to the kirk-session to proceed in the ordinary acts of administration, and application of these collections to the ordinary and incidental charities, though the heritors be not present, nor attend." The judgment farther declared, " that when any acts of extraordinary administration, such as uplifting money that hath been lent out, or lending or re-employing the same, shall occur, the minister ought to intimate from the pulpit a meeting for taking such matters into consideration, at least ten days before holding of the meeting, that the heritors may have opportunity to be present and assist, if they think fit." And, in a case tried in the next year (1752), it was ruled, that *any single heritor* has right to call the kirk-session to account for their administration of the poor's money. In consequence of these acts and decisions, everything respecting the administration of the poor's funds in Scotland was intrusted to those best acquainted with the real wants and situations of the claimants for relief, and who had, at the same time, the strongest motives for confining the charge, on their account, within the narrowest limits. A kirk-session is a sort of ecclesiastical tribunal, established in every parish. Its members are usually selected from the most respectable classes, and in country parishes are, for the most part, either proprietors or farmers ; and as Scotch farmers generally hold under leases for nineteen years, and are obliged by law to pay half the assessment on account of the poor, should one be imposed on their farms, they have the same interest as the landlords in the economical administration of the affairs of the poor, and in obviating the necessity for an assessment.

No doubt, however, the kirk-sessions, like the other parts of the machinery of the Scotch poor laws, were much better fitted for the management of the poor in thinly-peopled and purely agricultural parishes than for their management in parishes with a large and mixed population. It must, also, be borne in mind that the ministers having a paramount influence in the election of elders, it was always in their power to have a session favourable to their views ; and when these happened to differ from those of the landlords and people of property, the worst consequences were apt to ensue. To obviate the chance of such inconvenience, the 8 & 9 Vict. c. 83, enacts that the then existing arrangements for managing the affairs of the poor should be continued in all parishes in which the sums required for their support were raised by voluntary contributions, so long as they were raised by such means ; but that in the case of parishes in which assessments were then, or in which they should be at any former period, imposed for the support of the poor, their management should be intrusted to parochial boards, elected by people of property in the way pointed out in the Act. It also orders an inspector or inspectors of the poor to be elected for each parish or combination of parishes ; the Act authorizing parishes, if they think fit, to unite or combine for the better and more economical management of their parochial affairs.

The interests and the feelings of the heritors and kirk-sessions have been in general so much identified, that except on extraordinary occa-

sions, the former have rarely interfered in the management of the affairs of the poor, but have left it to the latter to enrol the regular paupers, to fix the weekly, monthly, or quarterly allowances to be paid to each, to administer assistance to the occasional poor, &c. The members of the kirk-sessions act gratuitously, without receiving any fee or reward; and there is no one acquainted with the subject who will not be forward to admit that, speaking generally, they have discharged the important and difficult duties imposed on them with an integrity, zeal, and considerate regard for the interests of all parties, that have never been surpassed, and very seldom equalled, by any set of functionaries.

Owing to the peculiar constitution of the kirk-sessions, appeals from their decisions to the justices and sheriffs were always rare, and never met with any encouragement from the Supreme Court. On the contrary, in 1772, this court set aside the judgment of a sheriff, fixing the provision which an applicant for relief was entitled to receive, on the ground "that he had arrogated to himself powers which belonged exclusively to the minister, elders, and heritors of the parish." A decision to the same effect was given in 1779; and at length, in 1819, it was finally decided, that there is no appeal to any *inferior court* from the decision of the kirk-session and heritors, either *as to the admissibility of a pauper to the roll, or as to the amount of the allowance to be given him.*

We doubt, however, whether this was a wise or an expedient course; and we incline to think that it would be good policy to restore to the sheriffs the decision, in the first instance, of all legal questions in respect to the poor.

Under the late Act a central Board has been established in Edinburgh; and all poor persons dissatisfied with the decisions of the parochial authorities must primarily appeal to it; and they can only appeal to the Court of Session in the event of their claim being approved by the Board. But we confess we do not see the use of this preliminary check. No doubt it will tend to prevent improper claims being brought before the Court of Session; but it may also quash those that are proper. The better way would have been to have referred such cases, in the first instance, to the sheriffs. Their decisions would seldom have been appealed from, at the same time that it would always have been practicable, by bringing them under the review of a superior tribunal, to rectify their errors.

The General Board is authorized to inquire into the condition and management of the poor in all boroughs and parishes; to order returns from them, &c.; but though it may make suggestions, it has no power to order them to vary their mode of managing the poor.

In consequence of the extreme economy of the kirk-sessions, and of their repugnance to admit improper persons on the roll, or to administer any relief not absolutely required by the exigencies of the case, to the able-bodied poor, the sums collected by voluntary contributions, at the church doors and otherwise, sufficed for a lengthened period for the support of the poor, and till recently, assessments had not been introduced into more than about a third part of the parishes of Scotland. The landlords and clergy seem, in fact, to have regarded them with a

sort of superstitious horror. It is worthy, also, of remark, that assessments, in various instances, after being imposed for a time, were abandoned, and the poor again provided for by voluntary contributions. In Scotland it has always been held that assessments should only be adopted as a *dernier resort*; and that they should not be introduced into any parish in which the poor may be otherwise supported. Down to a late period the orthodox opinion on the subject was, that assessments were not intended to supersede, but to add to the voluntary contributions of the parishioners; and that, unless the latter were insufficient to meet the urgency of the case, they were not to be resorted to.

The other particulars with respect to the Scotch poor laws are of inferior importance. Assessments in country parishes are imposed, half on lands and heritages, according to the real rent of the same, and half on the tenants and occupiers. In town parishes, half the assessment is imposed on lands and heritages (fixed property), and half on the whole inhabitants, in proportion to their "means and substance."

There has been, at different periods, a good deal of difference of opinion as to whether the parish or individual was connected with by birth or residence should be bound to support him in the event of his becoming a pauper. But it is now enacted by the statute 8 & 9 Vict. c. 83, that if an individual reside for five years in a parish, and support himself during that period by his own industry or resources, he acquires a settlement in it, and, consequently, a legal title to support, if he become infirm and destitute. It is worthy of mention, that how much soever opinions may have varied in Scotland, as to what should constitute a settlement, no individual in that part of the empire ever so much as dreamed of making the support of the poor a national instead of a parochial burden. Any such change would, indeed, be wholly subversive of all the principles of the Scotch system, and would set wide the flood-gates of pauperism. Mr. Monypenny truly states, that "the erecting each parish into a separate body, or one great family, as it were, independent, in so far as relates to the poor of any other parish, was an act of the wisest policy and most unquestioned expediency."

The following statement, taken from a Report by a committee of the General Assembly of the Church of Scotland in 1838, is interesting as exhibiting the state of pauperism in Scotland, previously to the introduction of the new system. (See p. 682.)

It appears from the returns annexed to the First Report of the Central Board, that the number of poor persons on the rolls of the different parishes amounted, in 1845-46, to 68,541, and that the sum derived from all sources for the relief of the poor during the same year, amounted to 303,329*l*. Of this sum 243,828*l*. was expended on the relief of the permanent poor; 24,633*l*. on the occasional ditto; 4,056*l*. on medical relief; and the residue on management, law expenses, &c.

*Account of the Parishes, and of the Numbers and Descriptions of Persons in Scotland that participated in the Poor's Funds in 1838; the Amount of such Funds, and the sources whence they were derived; the Mode and Expense of Management, &c.*

#### SECT. 4. Poor Laws of Ireland.

Though it be only of late years that any attempt has been made to provide for the wants of the poor of Ireland on anything like a comprehensive plan, they have attracted, at different periods, a considerable share of the public attention. Here, as in England and Scotland, vigorous efforts have been made to repress mendicity; but as no resource was simultaneously provided for the necessitous poor, the penal enactments directed against mendicity had no effect, and it has prevailed, and continues to prevail in Ireland to a frightful extent.

But notwithstanding the relief of the able-bodied poor has been till lately all but wholly neglected by Government, means were organised a considerable time ago, though on a very inadequate scale, for the

relief of the sick and impotent poor. These consisted of county infirmaries, fever hospitals, dispensaries, lunatic asylums, houses of industry, receptacles for orphans and destitute and deserted children, and asylums for the aged.

*County Infirmaries* were established under an Act passed in 1765, by which the primate, the lord chancellor, the bishop of the diocese, and the rector or vicar of the parish in which an infirmary was thought requisite, were made a perpetual corporation for its erection and support. They are supported under this and subsequent Acts by county presentments not exceeding 1,400*l.* a-year for each county, by a Treasury grant of 100*l.* a-year for surgeon's salary, and by subscriptions, donations, &c. These institutions undertake the treatment of all serious cases, whether surgical or medical, supposed to be curable, and which are not contagious. The inspection of the infirmaries, which are amongst the most valuable of the Irish charities, has been vested in the Poor Law Commissioners along with the local governors.

*Fever Hospitals.*—Owing to the deficient nourishment of the poor, and the destitution in which they are every now and then involved through the failure of the potato crops, fever is always very prevalent in Ireland; and sometimes, as in 1817, it attacks a large proportion of the population, and carries its ravages into every class. The organisation of means for the proper treatment of fever patients has, in consequence, engaged a large share of the public attention in Ireland, and fever hospitals have been established in most considerable towns. They are of three kinds, viz.:—1. County hospitals maintained exclusively by presentments; 2. District hospitals, maintained by private subscriptions and by presentments not exceeding double the amount of the subscriptions; and 3. Poor Law Union hospitals, the expenses of which are charged upon the union rates. But these institutions do not afford all the accommodation that might be supposed; and they are subject to various inconveniences, some of which have been pointed out in the Report of the Committee of the House of Lords on Irish Medical Charities in 1846. The County Hospital, for example, though supported by assessments raised upon the entire county, is nearly useless to those at a distance of more than ten or twelve miles, from the difficulty of removing patients to it; while the district hospitals do not fully supply this defect, the relief they afford being partial only, and dependent on the order of a subscriber. The poor law fever hospitals make, in most cases, ample provision for the wants of the unions; but at the same time that the charge for them is borne exclusively by the rate-payers, the latter are farther compelled to contribute their share of the assessments for the support of the district and county hospitals.

*Dispensaries.*—In order still farther to supply the wants of the sick poor, dispensaries, where medicines and medical and surgical advice and assistance are given gratis to the poor, have been established in most parts of the country. They are supported partly by private contributions, partly by equivalent grand jury presentments, and partly by fines at petty sessions. But though these institutions have been found to be of the greatest value, they are inefficient where either the will or the ability to supply an adequate amount of private subscriptions is wanting. Subscribers are mostly to be found among the wealthier

classes; and hence the poorer the district, the less the supply, and the greater the need of dispensary accommodation. We subjoin—

*An Account of the Number of Dispensaries, Fever Hospitals, and Infirmeries in Ireland in 1845.*

| 1843 . . .                 | 95,658  |            |         |
| Total for five years . . . |         | 515,573    |         |

To remove the defects of the existing systems of medical charities, the Committee of the House of Lords recommend the early legislative adoption of the following resolutions:—

“1. That the Lord Lieutenant should appoint a Medical Charities' Board, to be entitled “The Board of Health of Ireland.”

“2. That the Board should consist of one paid and other unpaid commissioners, and have an office in Dublin.

“3. That the Lord Lieutenant should appoint inspectors to visit and report (subject to the orders and instructions of the Board) upon every infirmary, fever hospital, dispensary, lunatic asylum, or other medical institution supported wholly or in part at the public expense.

“4. That the Medical Charities' Board should be authorized to draw up general regulations, and to furnish to the several hospitals and medical charities which it is proposed that they should visit, forms for keeping registers and journals, in order that the state of medical statistics of Ireland should be brought under one system, and should admit of a just comparison and generalization.

“5. That the Medical Charities' Board should report to the Lord Lieutenant the districts proper to be assigned to each of the existing county infirmaries, fever hospitals, and dispensaries, and the number of medical and other officers requisite for each; and whether any, and how many, additional infirmaries, hospitals, and dispensaries are requi-

site for the purpose of rendering such medical relief proportionate to the wants of the country.

"6. That every power necessary for obtaining the requisite information should be given to the said Board. The Committee further recommend, that the existing dispensaries, where they are in beneficial operation, should be interfered with as little as is consistent with due regard to uniformity of action. That the association of the resident gentry in the local superintendence and management of the medical charities should be as far as is practicable secured. That encouragement should be held out for voluntary subscriptions, without however making the institutions for affording medical relief to the poor dependent in any essential matter upon such aid. That the arrangements for dispensary relief should include a provision for midwifery cases. And that provision should be made for the gratuitous vaccination of the poor at workhouses, infirmaries, and dispensaries, supported wholly or in part at the public expense." (See for further and more ample details, *Thom's Dublin Almanac* for 1846, p. 164.)

The first asylum for lunatic poor was founded in Dublin in 1745 by Dean Swift, who bequeathed 11,000*l.* for its maintenance. It supports 148 patients, a portion of whom pay for their maintenance and medical treatment. With the exception of a few private institutions on a very limited scale, nothing further was done for a lengthened period. An hospital attached to the house of industry in Dublin, a large and well-conducted asylum in Cork, and cells connected with some county infirmaries and poor-houses, formed all the means provided for the medical and moral treatment, or even for the safe custody, of the insane paupers of Ireland. The Report of a committee on the lunatic poor, in 1817, gives the following appalling description of the treatment of these unhappy creatures:—"There is nothing so shocking as madness in the cabin of the peasant, where the man is labouring in the fields for his bread, and the care of the woman of the house is scarcely sufficient for attendance on her children. When a strong young man is thus affected, the only way they have to manage him is by making a hole in the floor of the cabin, not high enough for a person to stand up in, with a crib over it to prevent his getting out. The hole is about four feet deep: they give the wretched being his food in it, and there he generally dies." Wandering lunatics were dispersed over the country, in the most neglected and disgusting state. The recommendations of the committee now referred to were followed up by legislative enactments giving them the force of law. The Government was empowered to divide the country into a certain number of districts, within which lunatic asylums should be erected; the expenses of the buildings were to be advanced out of the consolidated fund, and repaid by local taxation: their maintenance, when erected, was to be provided for by grand jury presentments. Pursuant to these arrangements, the various counties of Ireland (except Cork, in which an asylum had been already instituted by a special Act) were divided into ten districts, in each of which a lunatic asylum was erected, and was brought into operation, under the surveillance of the inspectors-general of prisons.

But owing to the prevalence of lunacy in Ireland, these means were still very inadequate for the wants of the lunatic paupers, some of whom

were confined in the public gaols, while many were unprovided for in the country. To lessen the evils incident to such a state of things, a late Act, the 8 & 9 Vict. c. 107, provides for the enlargement of the district lunatic asylums, and for the establishment of a central lunatic asylum, and of provincial asylums. It has also changed the Cork institution from a local to a general asylum, and subjected it to the same authority and regulations as the others. The inspectorship of lunatic asylums was separated in the course of the present year (1846) from that of prisons, and intrusted to a separate officer.

The following statements, from *Thom's Dublin Almanac* for 1846, set the extent of lunacy in Ireland, and the provision made for the same in 1845, in the clearest point of view:—

“The number of insane patients in the district asylums on 1st January, 1845, was 2,136, being within 19 of the accommodation they are capable of affording. The applications during the year, for the admission of urgent cases, supposed to be curable, were 219. The pauper lunatics in the district and local asylums, gaols, and work-houses, 4,339. The number of lunatics confined in gaols is progressively and rapidly increasing. The proportion of cures has increased, and the average number of deaths is lower than was to be expected from the destitute condition of the poor patients on admission, many being in a dying state. The general expenditure of the ten district asylums for 1844 was 28,995*l.*; the average expense of each patient, 14*l.* 0*s.* 9*d.* The Report of the Inspector-general states that there is a number of lunatic paupers throughout the country, amounting to 6,217, who are totally unprovided for and unprotected. The amount of the profits of work executed by the patients in 1844 was 1,881*l.* 4*s.* 4*d.*, being an increase of 271*l.* 18*s.* as compared with the profits of the preceding year.

“The following table affords a summary view of all the cases which have come under the notice of the official authorities during the year, distinguishing males from females; showing the proportion of lunatics to the population to be as 1 to 747 $\frac{1}{2}$ :—

|                                                                                | Males. | Females. | Total. |

Houses of industry were instituted in consequence of the publication of a tract by Dr. Woodward, bishop of Cloyne, entitled “An Argument in Support of the Right of the Poor in Ireland to a National Provision.” The Act under which they were founded directed that every such establishment should be divided into four parts, for the infirm and refractory poor of each sex, and authorises the granting of

licenses and badges to beggars, a practice which was soon relinquished, as not only useless, but impracticable. This description of pauper establishments appears never to have been much in fashion, seeing that their number throughout Ireland did not exceed twelve, including the great central establishment in Dublin, supported exclusively by grants of public money. The combination of punishment and relief in the same institutions was deemed a fundamental defect in their constitution.

The public institutions for the support of orphans and deserted and destitute children are chiefly in the city of Dublin. The principal was the Foundling Hospital, opened in 1704 for the reception of destitute and deserted infants, from all parts of Ireland. These were mostly sent to the counties of Wicklow and Carlow to be nursed, and at a proper age were brought back to the central establishment, where they were educated and apprenticed to trades. The institution was wholly supported by grants of public money; but the injurious effect of such establishments on public morals, and the waste of life which they occasion, having been fully demonstrated, measures were taken for reducing and finally shutting up the establishment, by providing for the destitute children in their respective parishes or unions. This was effected in 1846. The Hibernian School in the Phoenix Park provides for the children of soldiers; the Marine School for those of sailors. The Blue-coat Hospital was incorporated in 1760 for the maintenance of the children of decayed citizens of Dublin. There are orphan houses established both for Protestants and Catholics. The principal institution for the reception of old men is the Royal Hospital at Kilmainham for invalid and superannuated soldiers, in which about 300 are supported. The House of Industry, supported by grants of public money, is now chiefly a receptacle for the aged and impotent poor, having attached to it several infirmaries, and an asylum for idiotic and epileptic cases.

Numerous charities are maintained by the exertions of private benevolence, independent of any aid from general or local taxation. They comprise orphan establishments, schools, hospitals for aged and impotent poor persons, lying-in hospitals, infirmaries, dispensaries, asylums for female penitents, houses of refuge, savings' banks, charitable loan funds, mendicity, and other associations. Such institutions are to be found chiefly in the cities and large towns. Dublin, Cork, Limerick, Waterford, Belfast, Londonderry and Drogheda, have each more or fewer of these charitable foundations. They are supported partly by donations, subscriptions, and bequests, and partly by collections at charity sermons. In Dublin, sermons of this nature are preached in one or other of the Roman Catholic places of worship, every Sunday throughout the year, with the exception of Easter; and few, if any, Sundays pass over without similar appeals to public bounty in several of the Protestant parochial churches and Dissenting meeting-houses. To enter into the details of management, even of the most remarkable, would be unsuitable to a work of this nature, and a mere catalogue of their names would be equally useless and uninteresting. The societies for the suppression of mendicity have been to a considerable extent superseded by the new poor law.

But though the means for the alleviation of suffering arising from

bodily infirmity, whether occasioned by sudden accident, or by the visitation of disease, were as great in Ireland as in most other countries, the suffering produced by the frequent destitution of large numbers of the able-bodied peasantry has attained a magnitude that baffles all the efforts of voluntary charity. Low wages and inconstant employment, occasioned by a redundancy of population, and the usual exhaustion of the supply of potatoes of the previous year before the crop of the succeeding year can be made use of, seem to be the immediate causes of this state of things. Its prevalence, as testified by the wide spread of mendicity, and the de-pair and outrage to which it necessarily leads, produced a strong and general conviction that the introduction of some sort of compulsory provision for the support of the destitute poor was absolutely necessary. And this was at length carried into effect, though in a way that admits of much amendment, by the Act 1 and 2 Vict., c. 56. We subjoin a remarkably clear and able exposition of the principles and working of the system introduced under this statute, derived from a gentleman engaged in its administration.

*Present System of Irish Poor Laws.*—The poor laws of Ireland date only from 1838, and are, in some respects, peculiar to that country, as distinguished not only from Scotland, England, and Wales, but also from every other country in Europe. Their chief peculiarity consists in this, that relief under them is administered solely in workhouses; and they thus differ from the Scotch poor laws, under which workhouses have scarcely been made use of at all, except in a few large towns, and from the English poor laws, which were intended by the legislature to be a mixed system of relief to the able-bodied in workhouses, and of relief to the impotent poor, partly in workhouses and partly at their own homes. They differ again from the English and Scotch poor laws in this, that while in England all destitute persons have a legal right to relief, and in Scotland all destitute impotent persons have a similar right (although in the latter country the able-bodied are not recognized as objects of relief from the assessments); in Ireland, on the contrary, no individual was intended to have a legal right to relief; but, at the same time, whether able-bodied or impotent, he may equally receive relief in a workhouse, provided he is destitute.

In order fully to understand the present system of Irish poor laws, it is desirable to be acquainted with the circumstances which led to its establishment. The introduction of poor laws into Ireland had been strongly advocated by various persons in this country for many years, and had been keenly opposed, on the other hand, not only by many who imagined that they had a direct pecuniary interest in resisting them, but likewise by speculative reasoners, whom the abuses of the old English poor laws, subsequent to the year 1795, had led to the conclusion that the principle of a legal provision for the destitute was in itself radically unsound. The supporters, however, of this opinion (which we believe to have been founded on fallacious reasonings) were unable to maintain their ground against the growing conviction, that Ireland ought not to be the only part of the empire in which the relief of the destitute should be generally left to the caprices of voluntary contributions. Accordingly, in September, 1833, Lord Grey's Government issued a Commission of Inquiry, consisting of nine individuals,

(including Dr. Whately, the Protestant archbishop, and Dr. Murray, the Roman Catholic archbishop of Dublin,) who were appointed to inquire "not only into the condition of the poorer classes of Her Majesty's subjects in Ireland, and into the various institutions then established by law for their relief;" but also, "whether any and what further remedial measures appeared to be requisite to ameliorate the condition of the Irish poor, or any portion of them." The Commissioners having appointed Assistant Commissioners, and instituted extensive and searching inquiries throughout Ireland, made their first Report (prefixed to a thick volume of Evidence) in 1835: and their second and third Reports were presented to Parliament in 1836. The third Report contained their recommendations; and as it is of some importance that they should be placed on record, we will briefly advert to them.

The proposed measures of relief for the poor were partly indirect and partly direct. The former scarcely fall within the subject of poor laws, and may, therefore, on the present occasion, be dismissed with a cursory notice. It may be proper, however, to state that they included the appointment of a Board, to be called the Board of Improvement, which was to be authorized to appoint Commissioners of Partition to make a survey, valuation, and partition of waste lands in Ireland; and in reference to lands already in cultivation, both draining and fencing, wherever necessary, were to be enforced by law, and the Board of Improvement was to be authorized to appoint local Commissioners for any district they might think proper. Their measures of direct relief for the poor involved, amongst other things, the introducing the following establishments or institutions:—

1. Asylums for the relief and support of lunatics and idiots.
2. Asylums for the support and instruction of the deaf and dumb and blind and poor.
3. Depôts for the destitute of every class and description who were fit subjects for emigration, and the furnishing to such persons a free passage to some British colony.
4. Penitentiaries for vagrants.
5. An institution in every relief district for the support and relief of cripples, and persons afflicted with epilepsy or other permanent disease.
6. An infirmary hospital and convalescent establishment in each relief district.
7. As many dispensaries as might be requisite. From these medical attendance was to be given, and a supply of food as well as medicine when the persons to be relieved were not in a state to be removed from home.
8. A provision by law towards the relief of the aged and infirm, orphans, helpless widows with young children, and casually destitute persons in general.
9. The building a mendicity or almshouse for any parish or parishes which might desire it.

The Commissioners recommended that the expenses to be incurred under the 1st, 2nd, 4th, and 9th heads should be defrayed from a national rate, to be levied over the whole of Ireland; and that the expenses under the 5th, 6th, and 7th heads should be defrayed from local assessments. They differed among themselves as to the best

means of raising the funds under the 8th head; some thinking that the necessary funds should be provided in part by the public, through a national rate, and in part by private associations; while others thought that the whole of the funds should be provided by the public, one portion by a national rate, and another by a local rate. And with reference to the 3rd head, viz., the depôts for emigration and the free passage to emigrants, it was proposed that one-half of the expense should be borne by the general funds of the empire, and that the other half should be defrayed partly by the national rate, and partly by the owners of the lands from which the emigrants removed, or from which they might have been ejected within the preceding 12 months, provided that they had previously resided thereupon for a period of three years.

Lord Melbourne's Government, to whom the above series of suggestions was submitted, felt unwilling to adopt plans of such novelty (in some particulars) and magnitude, more especially as they were apprehensive of the indefinite expense which some of the recommendations seemed to involve. And they were confirmed in these views by the opinion of some individuals who had paid especial attention to the subject of poor laws. Thus Mr. Senior, who had been one of the leading members of the English Poor Law Commission of Inquiry, and Mr. George Cornwall Lewis, both concurred in the opinion that the proposed system would not work, and in dissuading the Government from adopting it. The latter gentleman had previously published a valuable work on the causes of Irish disturbances, in which he had, amongst other measures, recommended the introduction of a poor law; he had likewise acted as an Assistant Commissioner on the Irish Commission of Inquiry, and had been employed, during 1834, by the Secretary of State for the Home Department, in making inquiries and in framing a Report on the condition of the Irish poor in Great Britain. At the request of some members of Government, he then drew up a separate paper (which was printed and presented to Parliament), in which he set forth in detail his objections to the measures which had been recommended by the Commissioners. In their stead he suggested a law for granting relief to the destitute solely in workhouses; and he particularly insisted on the advantage which his plan possessed in merely involving a moderate and well-defined expenditure, so that if the scheme failed, the country would be in quite as good a state as it was before, excepting merely that so much money would be laid out in building workhouses; whereas he condemned the proposals of the Commissioners, partly as impracticable, partly as leading to expenses, of which no one could foresee the limit, and partly as being of such a nature that if they turned out unsuccessful it would be found almost as difficult for the country to recede as to advance.

Eventually the Government determined not to act upon the suggestions of the Commissioners, and, in August, 1836, Lord John Russell, who was then Secretary of State for the Home Department, directed Mr. Nicholls, one of the English Poor Law Commissioners, (who had previously borne a prominent part as a private individual in administering the English poor law on correct principles at Southwell, in Nottinghamshire,) to proceed to Ireland, requesting him, among other things, to weigh the question, whether a rate limited in its

amount rather than in its application to particular classes, might be usefully directed to the erection and maintenance of workhouses for all those who sought relief as paupers? Mr. Nicholls proceeded to Ireland, and having visited various parts of the country, examining and inquiring into the several towns and districts through which he passed as to the condition and habits of the people, he returned to London and made his first Report, dated November 15th, in which he recommended a system of relief in workhouses corresponding in its main features with the system afterwards adopted. His recommendations were made the ground-work of a Bill which was introduced into Parliament in the session of 1837, but which did not then pass into a law. In the autumn of 1837 Mr. Nicholls, at the request of Lord John Russell, again visited Ireland, having received instructions to report whether anything which he was then able to observe or collect, caused him to alter or in anyway to modify his former opinions and recommendations. He then returned to London and presented to Lord John Russell his second Report, dated November 3rd, 1837, in which he adhered, with some trifling modifications, to his former suggestions; and on the 31st July, 1838, the Bill of the previous session, with some alterations, (the most important of which were the omission, contrary to Mr. Nicholls's views, of clauses for the suppression of vagrancy, and the substitution of an electoral division for a Union rating,) finally passed into a law.

It is upon this Act (the 1st and 2nd Victoria, c. 56), and the Irish Poor Law Amendment Act, passed in 1843 (the 6th and 7th Victoria, c. 92), that the present Irish poor laws are mainly based; and it is now proposed to give an outline of the system as it is actually in operation at present.

Relief, as we have already stated, is administered solely in workhouses. The whole of Ireland is divided into Unions; each Union has a workhouse, with paid officers for the relief of the destitute; and each workhouse is under the management of guardians, partly *ex officio* and partly elected by rate-payers, subject, within certain limits, to the control of the Poor Law Commissioners, and thus the system may be conveniently described under the following heads:—

Unions.

Workhouses.

Inmates of workhouses.

Paid officers of the Union.

Guardians, or the elected body of managers.

Rate-payers or electors.

Poor rates.

Poor Law Commissioners.

1. The number of Unions into which Ireland is divided is 130. They differ, however, materially from one another, both in territorial extent and amount of population. Assuming that the area of Ireland, in accordance with the last census and Ordnance survey, is 20,808,271 statute acres, the average area of each Union is 160,063 acres; but North Dublin Union includes only 38,917 acres, while Ballina Union, in Mayo, amounts to 507,154. Again, an idea of their general size may be formed from the following statement:—There are only two Unions under the average diameter of 10 miles. There are 81 Unions;

of which the average diameter varies from 10 to 20 miles inclusive. There are 43 Unions, of which the average diameter varies from 20 to 30 miles inclusive; and there are two Unions, the average diameter of which exceeds 30 miles; and these, with the addition of two Unions, of which the exact size has not been calculated, make up the 130. Moreover, the Unions differ in population, as might be expected, from the varieties in the density of population in different parts of Ireland. The average population of each Union (calculated on the last census) is 62,885: but Gortin Union, in Tyrone, has a population of only 18,747 (which is the minimum), while South Dublin Union has a population of 178,745. The general principle which regulated the formation of the Unions was, that the Union should consist of the market town and the district surrounding and dependent on it. Neither county nor baronial boundaries were observed in any case in which a sufficient cause existed for departing from them; and the only unbending rule as to boundaries was, that no townland should be divided. At the same time the boundaries of property were observed, as far as was compatible with the general interest and convenience.

Each Union is divided into a certain number of electoral divisions, each of which has its respective guardians. The expense of paupers relieved in the workhouse is charged against the electoral division in which such paupers are registered as having been resident, and if they are not stated in the registry to have been resident within some electoral division, they are charged to the whole Union. The definition of residence for this purpose is, that a pauper, during the 18 calendar months before his admission into the workhouse, has occupied some tenement within the division for 12 calendar months; or if he have not so occupied some tenement, has usually slept within such division for the period of 12 calendar months. The clauses respecting the establishment of electoral divisions were not a part of Mr. Nicholls' recommendations, but were inserted in the original Act, at the suggestion of the Duke of Wellington. Their object was to give owners of property a more direct interest to look after the condition of the poor on their estates.

The total number of electoral divisions in Ireland is 2,049. The average number of electoral divisions in one Union is 15. The minimum number is in Clifden Union (which includes Connemara), which has only four divisions. The maximum is in Omagh Union, which has 29.

In the formation of electoral divisions, as in the formation of Unions, the only unbending rule was that no townland should be subdivided. This rule was prescribed by the legislature and no other principle was deemed imperative. Hence the townland may be regarded as the unit of the Poor Law Union territorial divisions.

In connexion with this head, it may be observed that, under the 44th section of the Irish Poor Relief Act, the elective guardians of any two or more divisions may obtain a common rating by signing an agreement to that effect, and the result would be that all the charges would then be borne in common by all the divisions of the Union. The attempt, however, to obtain a Union rate, which has been made in several instances, has succeeded only in one, viz., that of Dunmanway Union.

2. Every Union has one workhouse, and there are thus no less than 130 workhouses in Ireland. Of these 129 are fully in operation for the relief of the poor. The remaining one is Clifden workhouse, in Connemara; but this also is now ready for the reception of paupers, and a rate to enable the guardians to relieve them is in course of collection. With five exceptions (viz., in the Unions of North and South Dublin, Clonmel, Fermoy, and Cahirciveen,) all the workhouses are new buildings which have been erected since 1838. They were all built according to the plans of Mr. Wilkinson, the architect of the commission, who had previously been the architect of between 30 and 40 workhouses in England and Wales. The plans of nearly all are similar, according to their sizes, and the materials of the walls are, for the most part, of stone; and all the sites were selected, and all the houses subsequently built, within the four years from 1838 to 1842. It was deemed desirable to introduce the new law with as great rapidity as possible; and hence some mistakes may have occurred regarding some of the sites and some of the buildings. In general, however, it may be stated, with confidence, that the sites were well selected, and that the houses are as substantially and well built as could possibly be expected under the circumstances. Moreover, their general appearance is, on the whole, an ornament to the country.

The workhouse is commonly situated at or near the chief market town of the Union; and all the new workhouses have a portion of land attached to them. The most usual extent of the workhouse grounds is about five or six acres, including the workhouse site; but in some instances the quantity is greater, (amounting indeed in one case to as much as 12 acres,) and in some instances it is less; so as not much to exceed three acres.

Every workhouse has an hospital connected with it, and the guardians of 50 Unions have either built or determined to build fever wards as a separate and distinct building.

The workhouses were built and fitted up by means of funds, supplied in advance by loans from Government. The total amount of the loans so borrowed in the 130 Unions up to the 1st of May last, was 1,145,150*l*. Comparing that amount with the entire valuation of Ireland, the result is an average rate of 1*s*. 8½*d*. per pound. The entire sum is payable by equal instalments over a period of 20 years, and the average portion annually payable in respect of the principal sum is, therefore, a small fraction above a penny in the pound. The amount of pressure, however, is very different in different Unions, as will be seen from the Table A. in the Appendix A.

The total number of inmates which the 130 workhouses are supposed to be able to accommodate is 93,860 (exclusive of the fever hospitals), which would give an average for each workhouse of 722 inmates; but the workhouses differ materially as to the accommodation which each can afford. The smallest sized house is adapted to contain 200, and the largest 2,000. The average cost of each house was 8,808*l*., but Gortin workhouse (for 200 paupers) cost as little as 3,600*l*., while Cork workhouse (for 2,000) cost as much as 21,000*l*.

3. The inmates of the workhouses in Ireland consist of the most destitute and helpless members of society, being chiefly aged and infirm, or permanently disabled, or widows and children. As destitution is in

itself a sufficient ground of admission, some of the inmates are able-bodied men. The ordinary weekly returns, however, have not hitherto taken special notice of the able-bodied as such; the only classification being, first, males aged 15 and upwards; 2ndly, females aged 15 and upwards; and, 3rdly, children under the age of 15. The number of inmates until the last two failures in the potato crop never was as great as 45,000, thus justifying the original estimate of Mr. Nicholls, who assumed that workhouse accommodation might occasionally be required for one per cent., or about 80,000 persons, but who did not anticipate that they would be more than one-half filled at an average of the whole year. The subjoined table contains a statement of the number for each week, from the week ended Saturday, December the 20th, 1845, to Saturday, November the 21st, 1846; together with the numbers during the corresponding weeks of the previous year. It is interesting as showing the effect of the distress on the number of inmates.

*Summary of Weekly Returns of Paupers in the Workhouses in Ireland, distinguishing the Numbers of Males, Females, and Children; showing, also, the Number of Paupers in the Union Workhouses at the close of each Corresponding Week in the preceding Year.*

| Weeks ended Saturday. | Total Number of Paupers in the Workhouses at the Close of the Week. |                            |                              |                           |                            |                                |                          | Increase or Decrease over Preceding Week. | Number of Corresponding Weeks in the Preceding Year. |                    | Increase in            |                    |

| .. Nov. 7             | 126                                                                 | 12,516                     | 21,643                       | 39,017                    | 10,163                     | 63,913                         | 74,079                   | 5,266                                     | 122                                                  | 35,009             | 7                      | 39,167             |
| 14                    | 126                                                                 | 12,730                     | 22,479                       | 41,441                    | 10,332                     | 66,236                         | 76,650                   | 9,574                                     | 122                                                  | 35,711             | 7                      | 40,939             |
| 21                    | 126                                                                 | 13,172                     | 24,791                       | 43,727                    | 10,994                     | 69,706                         | 80,600                   | 3,950                                     | 122                                                  | 36,002             | 7                      | 42,790             |

It will be seen from the above statement, that the number of inmates has increased to 80,600, being 43,798 more than in the corresponding week of 1845, and which somewhat exceeds the number originally contemplated by Mr. Nicholls. Although the weekly returns do not present a minute classification of the pauper inmates, yet returns have from time to time been made, which enable us to form an accurate idea on this point. Thus a return is given in the Appendix B., which presents a summary of the number of paupers in the workhouse at four different periods, distinguishing the able-bodied, aged 15 and upwards, from the aged and infirm, or permanently disabled. From this return, it appears, that on the 31st of January, 1845, when the total number of paupers was 43,293, the number of the able-bodied was 9,231, of whom only 2,809 were males, while 6,422 were females. It further appears that the number of the aged and infirm, or permanently disabled, was 11,441, while the total number of all other classes was 22,621.

Again, in the year 1844, very minute statistical tables were framed, showing the social and domestic condition of 27,529 adults, and of 22,585 children in workhouses. The detailed result is given in Appendix C., but it may be useful to remark, that of the adults, 5,942 were widows and 3,622 widowers, and that of the 22,585 children, as many as 19,886 were legitimate, of whom 4,164 were orphans.

There is no reason to believe that the relative proportion of numbers in any of these classes has materially altered since the above analysis was made.

Until the late failure in the potato crop, the ordinary dietary recommended by the Commissioners for adults in workhouses, consisted of seven or eight ounces of oatmeal made into stirabout, with half a pint of new milk for breakfast, and four pounds of potatoes weighed (raw) with a pint of buttermilk for dinner, with a variation of broth for dinner during two days in the week. Since the failure of potatoes, the most common substitute at dinner has been Indian meal.

There are few workhouses in which the adults have more than two meals a-day, inasmuch as three meals a day are not common amongst the lowest class of independent labourers.

The average weekly cost per head of paupers for the whole of Ireland, during the half-year ended September, 1845, was 1*s.* 8*d.*, of which 1*s.* 5½*d.* was for provisions and necessities, and 2½*d.* for clothing. Mr. Nicholls had estimated the average cost at 1*s.* 6*d.* per head.

4. Every Union in Ireland has a staff of paid officers, of which the following is a correct list, in reference to workhouses of an average size. In some of the largest workhouses there are a few additional assistants, and in 20 Unions, more especially, there is an apothecary, in addition to the medical officer. The average remuneration of each officer, and the maximum allowed in any Union, are annexed to the designation of each.

All these officers, except the returning officer and the chaplains, are appointed by the guardians, but are removable for unfitness or incompetency by the Commissioners.

The duty of providing for the due performance of religious service

in workhouses is specially devolved upon the Commissioners, and they appoint chaplains for this purpose, and regulate their salaries, being bound however to give preference to individuals who officiate within the parish in which the workhouse is situated, and also not to appoint more than three in one Union, viz. : one of the Established church, one of the Roman Catholic church, and one dissenting minister. The latter expression is found in practice to be synonymous with a minister of the Presbyterian church; and in the north of Ireland, in which the Presbyterians are a numerous body, there are as many as three chaplains for some workhouses. There are, however, only 36 workhouses in which the appointment of a Presbyterian chaplain is found necessary. In regulating the chaplains' salaries, the ordinary principle adopted was to proportion the remuneration to the labour to be performed by each; and as Roman Catholics are far more numerous amongst the inmates than the members of any other religious persuasion, this will explain the higher rate of remuneration to the chaplains of the Roman Catholic church.

| Name of Officer.                  | Average Amount of Salary.            | Maximum Salary.    |
|-----------------------------------|--------------------------------------|--------------------|
|                                   | £. s.                                | £.                 |
| Clerk . . . . .                   | 54 2                                 | 130                |
| Master . . . . .                  | 41 18                                | 100                |
| Matron . . . . .                  | 24 15                                | 60                 |
| Chaplains :—                      |                                      |                    |
| Established Church . . . . .      | 25 12                                | 60                 |
| Roman Catholic . . . . .          | 41 7                                 | 100                |
| Presbyterian . . . . .            | 25 10                                | 40                 |
| Medical Officer . . . . .         | 54 10                                | 100                |
| Schoolmaster . . . . .            | 17 16                                | 30                 |
| Schoolmistress . . . . .          | 13 13                                | 25                 |
| Porter . . . . .                  | 11 3                                 | 25                 |
| Returning Officer . . . . .       | 10 0                                 | 25                 |
| Collector of Poor Rates . . . . . | 7d. in the pound on money collected. | 30d. in the pound. |

The above system is a striking instance of the recognition on a large scale of the principle that the ministers of the three religious persuasions are, as such, on an absolutely equal footing, and are equally entitled to remuneration from the local taxes.

The total amount of salaries and rations for Union officers in 112 Unions during the half-year ended the 29th of September, 1845, was 22,464*l.* 10*s.* 2½*d.*

5. The immediate control and superintendence of the workhouse, and the paid officers, is vested in the Board of Guardians of the Union to which the workhouse belongs, but no individual guardian, except in two special cases, has power to act in virtue of his office, except as a member, and at a meeting of a Board of Guardians, and no Act of any such meeting is valid unless three members are present and concur.

Guardians are either elective or *ex officio*.

The elective guardians are elected annually, in March, by the rate-payers of the respective electoral divisions. Any male person of full age who has not been convicted of certain offences, and who is not in holy orders, or a regular minister of any religious denomination, is eligible as

a guardian, provided that he has the requisite qualification in the Union. The qualification must not exceed the nett annual value of 30*l.*, but is otherwise left to be settled by the Commissioners, in reference to the circumstances of each Union. In practice, the qualification has never been fixed below 5*l.*

The total number of elective guardians in Ireland is 3,293, which, on an average, is less than two for each electoral division. However, for some divisions, especially in Unions which consist partly of a large town population and partly of rural districts, the number is greater.

Thus, in North and South Dublin Unions respectively, the number of guardians for the divisions, which include the city, is 18. But every electoral division, however small, has at least one guardian.

The average number of elective guardians for each Union is 25. One Union, however, viz., Clifden, has as few as 12; and one, viz., Kilkenny, has as many as 47.

With certain exceptions, every justice of the peace residing in a Union, and acting for the county in which he so resides, is an *ex-officio* guardian, provided that the total number of justices so qualified does not exceed one-third of the elective guardians. If the number of such justices exceeds that proportion, they meet every year in September and elect from their own body the number allowed by the law.

The total number of *ex-officio* guardians in Ireland is 1,050; the average number for each Union being 8, the minimum 2, and the maximum 15; and the total number of elective and *ex-officio* guardians is 4,343.

The Boards usually meet once a-week; and there is some reason to believe that the results of this system of local government have been, on the whole, beneficial in mitigating religious and political animosities. It has been observed that individuals of different creeds and political opinions have officially acted together for the first time in their lives; and have thus frequently learned to know and esteem each other.

Some of the Boards of Guardians have occasionally passed resolutions on the subject of the Repeal of the Union; but otherwise they have generally avoided the discussion of political questions; and have confined themselves to the discharge of their appropriate duties.

6. *The Constituency.*—Every rate-payer of a Union who, under the poor-rate last made, has paid or contributed rate, or is liable to pay or contribute rate in respect of property in such Union, is entitled to vote at every election of guardians.

A rate-payer is defined to be—

1st.—Every occupier paying rate and not entitled to deduct the whole thereof from the rent paid by him.

2nd. Every person receiving, in respect of any rateable property, rent from which any deduction shall be made on account of rate, in case such rent shall exceed all rent paid by him in respect of the same property. And

3rd. Every owner of tithe; although, however, every rate-payer has one vote, both occupiers, landlords, and tithe owners, may have more than one according to a certain scale which has been fixed by Act of Parliament. This scale, however, is so adjusted that no one individual

in the capacity of either owner or occupier alone can have more than six votes.

In the original Poor Law Relief Bill, contrary to Mr. Nicholls's recommendations, no occupier, however small his holding, was exempted from the payment of poor-rates. It was afterwards found, however, that the number of small rate-payers was so large, the line of demarcation between the lowest rate-payer and the destitute so difficult to draw, and the amount to be collected from the lower classes so very small compared with the cost and trouble of the collection, that the law was altered in 1843 so as to exempt the occupier in cases wherein the net annual value of all the rateable property occupied by any one person in the Union did not exceed 4*l.* In all such cases the rate is now made on the immediate lessor, and a fertile source of discontent has been removed.

The exact number of rate-payers in Ireland at the present time has not been ascertained. The best approximation to the truth is afforded by a return made in 1843. From that return it appears that the total number of rate-payers was than 997,434, and that of these 461,895 were rated at the annual value of only 4*l.* and under. If all these were deducted, there would still remain 535,539 rate-payers; and even making allowance for the exemption of occupiers, under certain circumstances in certain boroughs, the annual value of whose property is 8*l.*, there can be little doubt that the number of electors in the Irish Poor Law Unions is more than half a million.

7. Having treated of the rate-payers, we proceed to notice more especially the subject of the *Poor Rates*, and will consider—

- 1st. The property on which it is imposed.
- 2nd. The districts over which it extends.
- 3rd. The mode of its assessment, collection, and expenditure.
- 4th. Its annual amount.

(1). The property liable to poor-rates consists of the hereditaments declared to be rateable under the 63rd section of the original Act, viz.—

- All lands and buildings;
- Mines which have been open seven years;
- Commons, rights of commons, and all other profits out of land;
- Rights of fishery;
- Canals, navigations, and rights of navigation;
- Rights of way, and other rights and easements over land, and tolls levied in respect thereof;
- All other tolls.

The following kinds of property are exempted from poor-rates:—

- Turf bogs, or turf banks, for which rent or valuable consideration is not payable;
- Church, chapel, or other building exclusively dedicated to religious worship, or exclusively used for education of the poor;
- Burial ground or cemetery;
- Infirmaries, hospital, charity school;
- Other buildings used exclusively for charitable purposes;

Any building, land, or hereditament, dedicated to or used for public purposes (s. 63).

By a proviso at the end of the same section, any person directly "deriving any private profit or use" from the property exempted as above, is declared "liable to be rated as an occupier according to the annual value of such profit or use." Under these words owners receiving rents in respect of such exempted property have been hitherto almost universally rated for the nett annual value of such rents; but, by a recent decision of the Court of Queen's Bench, such parties have been declared not to be rateable for their rents.

(2). The district to which the assessment for poor-rates extends is,—

1. The whole Union, when an equal rate is made upon the whole.
2. Any single electoral division, when an equal rate is not made upon the whole Union.

Whether the assessment is of the whole Union, or of a single electoral division, the rates levied on each electoral division form a separate fund, for the disbursement of which the guardians account separately with the division. Part of the disbursement of this fund is on account of the electoral division alone; as that for the maintenance and clothing of paupers belonging to the division, or for the poundage fees of collectors; another part it bears in common with the other electoral divisions of the Union, and these common charges are fixed on the electoral division in the proportion of its net annual value, according to the valuation in force for the time being.

(3). The agency provided for the assessment and collection of the poor-rate, is as follows:—

The Poor Law Commissioners prescribe the form of rate, 6th and 7th Vict., c. 92, s. 10. The guardians by 1st and 2nd Vict., c. 56, s. 66, and the Poor Law Commissioners under the same section, and under 7th section of 6th and 7th Vict., c. 92, are empowered to provide for the valuation of the rateable property.

The guardians under section 61 of the original Act, and under section 10 of the Amendment Act, make the rate; the clerk of the Union first certifying that the rate is in accordance with the valuation in force for the time being; the guardians in the next place adopting the rate, and the chairman of the meeting, and two other guardians present at the meeting, signing the allowance of the rate.

The collectors of the poor rates are—

1. Any collector of county (grand jury) cess for any part of the electoral division for which the rate is made who may be approved by the Poor Law Commissioners, and give security to the satisfaction of the Commissioners, and accept the salary or allowance approved by the Commissioners (1st and 2nd Vict., c. 56, s. 73.)

2. If the county cess collector do not give satisfactory security, nor accept the allowances offered, the rate may be levied by any other officer of the Union, who shall, with the approval of the Commissioners, be thereunto appointed and authorized by the guardians, (*ibid.*)

The guardians are to issue to each collector, warrants under their

seal, specifying the amount to be levied on each electoral division in his district, and the proportions to be paid by the parties liable, (*ibid.*)

The collector having received his warrant, has the same powers for levying the rates as the county cess collector, that is to say—

1. He may distrain and sell at once under his warrant from the guardians, taking, in addition to the rents due, 12*d.* in the pound, for the costs of distress and sale.

2. He may, after six days' notice, and non-payment in that time, summon before a justice of the peace, and obtain justice's warrant of distress, with such costs as the justice may deem reasonable.

3. He may proceed by civil Bill, where the sum does not exceed 50*l.* See 1st and 2nd Vict., c. 56, s. 73, and 6th and 7th Will. IV., c. 116, ss. 152, 153.

If the rate be not paid within two months, the collector may proceed as by distress for rent (s. 78).

Where the immediate lessor is liable under the 6th and 7th Vict., c. 92, the collector may, in addition to the above powers, proceed in any of the superior courts in the name of the guardians, and with the consent of the Poor Law Commissioners (s. 2), or he may distrain on the occupier, having first served notice (s. 3.), and the occupier can recover the amount from his landlord.

By the rules and regulations of the Poor Law Commissioners, each collector is required to give a bond to the guardians, with sufficient securities, to pay over the rates collected by him to the treasurer of the Union, and he is required to pay over what he collects every week, and as often as the sum in his hands amounts to 50*l.*

The disbursements of poor-rate are made by the Board of Guardians; and by a regulation of the Poor Law Commissioners, they are required to pay every sum amounting to 3*l.*, by a separate draft on the treasurer.

The accounts of the guardians are required to be made up half-yearly, (1 and 2 Vict., c. 56, c. 44.)

The accounts of the guardians and their officers are subject to audit by auditors appointed by the Poor Law Commissioners (ss. 84 and 95). There are at present four auditors of Union accounts in Ireland.

(4) The annual expenditure of poor-rates, made since the passing of the Act, has been returned to Parliament as follows:—

| Total expenditure during the year ended—                       |       | £.      | Number of Unions. |
|----------------------------------------------------------------|-------|---------|-------------------|
| 1st January, 1841                                              | . . . | 37,057  | 4                 |
| „ 1842                                                         | . . . | 110,277 | 37                |
| „ 1843                                                         | . . . | 281,233 | 92                |
| „ 1844                                                         | . . . | 244,374 | 106               |
| „ 1845                                                         | . . . | 269,529 | 112               |
| Total expenditure as shown by the clerks' returns, year ended— |       |         |                   |
| 1st January, 1846                                              | . . . | 316,026 | 123               |

The following table exhibits a Summary of the expenditure for four half-years, derived from the Abstracts of the Audited Accounts:—

| Expended under the following Heads.                   | 99 Unions.<br>Half Year<br>ended<br>29th Sept., 1843. | 106 Unions.<br>Half Year<br>ended<br>25th Mar., 1844. | 109 Unions.<br>Half Year<br>ended<br>29th Sept., 1844. | 109 Unions.<br>Half Year<br>ended<br>25th Mar., 1845. |
|-------------------------------------------------------|-------------------------------------------------------|-------------------------------------------------------|--------------------------------------------------------|-------------------------------------------------------|
|                                                       | £. s. d.                                              | £. s. d.                                              | £. s. d.                                               | £. s. d.                                              |
| Maintenance and Clothing:—                            |                                                       |                                                       |                                                        |                                                       |
| On account of Electoral Division Paupers . . . . .    | 60,590 13 8                                           | 62,428 6 0½                                           | 71,592 8 0½                                            | 68,162 15 11½                                         |
| On account of Union Paupers . . . . .                 | 7,125 10 5½                                           | 8,877 11 5                                            | 11,491 13 5½                                           | 11,066 16 7½                                          |
| Total . . . . .                                       | 67,716 4 1½                                           | 71,305 17 5½                                          | 83,084 1 5½                                            | 79,249 12 7                                           |
| Establishment . . . . .                               | 36,304 13 9½                                          | 37,352 18 7                                           | 37,307 10 0½                                           | 37,923 19 8½                                          |
| Repayment of Workhouse Loans . . . . .                | 5,198 12 8                                            | 4,770 0 0                                             | 4,584 3 4                                              | 2,590 0 0                                             |
| Vaccination . . . . .                                 | 1,804 13 0½                                           | 2,372 15 0                                            | 1,790 17 7½                                            | 1,552 2 11                                            |
| Valuing or revising Valuations . . . . .              | 1,961 6 7                                             | 3,150 7 8                                             | 1,723 11 5                                             | 2,133 19 6                                            |
| Collectors' Poundage, or other Remuneration . . . . . | 2,069 3 0½                                            | 3,502 14 6½                                           | 3,031 4 5½                                             | 3,867 9 6½                                            |
| Emigration . . . . .                                  | .                                                     | .                                                     | 101 13 11                                              | 48 15 1                                               |
| Emigration Loan, repayment of . . . . .               | .                                                     | .                                                     | .                                                      | .                                                     |
| Funerals, Election, Law, and other Expenses . . . . . | 3,375 8 11                                            | 8,312 16 3½                                           | 4,192 18 10½                                           | 6,700 10 7½                                           |
| Total Expenditure . . . . .                           | 118,450 2 8                                           | 130,667 9 6½                                          | 135,816 1 1½                                           | 134,066 9 11½                                         |

We will only add on this head that the nett annual value of all the property rated in Ireland is 13,253,825*l.*, and that the expenditure of 316,026*l.* for 1846 would be equal to an average rate of 5½*d.* in the pound for the year. The pressure, however, varied materially in different Unions and electoral divisions; and the above expenditure was only in 123 Unions out of the 130.

8. The carrying the Irish Poor Law Act into execution was intrusted to the English Poor Law Commissioners; but at the same time it was provided that any one of the Commissioners, when required by one of Her Majesty's principal Secretaries of State, or when the Board should deem fit, might act in Ireland, and should have the same powers as the Board of Commissioners, except the power of making general rules.

The powers given to the Commissioners were of the most extensive nature, and they were vested in Mr. Nicholls, who went to reside in Dublin as resident Commissioner. The responsibility of dividing the country into Unions and of causing the 130 workhouses to be built devolved upon him. For dividing the country into Unions, adjusting the boundaries of the electoral divisions, determining the number of guardians, and otherwise bringing the Act into operation, he took with him from England four English Assistant Commissioners, with whom four Irish Assistant Commissioners were associated; and three other Assistant Commissioners were added in the following year. For building the workhouses Mr. Wilkinson was appointed architect, and the 123 new workhouses, as we have already stated, were erected by him.

In order to prevent undue pressure on particular workhouses, and for other reasons of policy, it was deemed advisable to introduce the new law with celerity; and so much energy was shown on this head, that although Mr. Nicholls only reached Dublin on the 4th September, 1838, as many as 104 Unions were established by the 25th March, 1840, and the Commissioners were enabled to state, in their Annual Report

in May, 1842, that 81 workhouses had been declared fit for the reception of destitute poor, and that all the workhouses were either built or in progress of building. Mr. Nicholls finally left Ireland in December, 1842, and subsequently the business of the Dublin office was conducted by two Assistant Commissioners, Mr. Gulson and Mr. Power, who acted under a delegation from the Central Commission. A fourth Poor Law Commissioner, Mr. Twisleton, intended to reside in Dublin, was appointed in November 1845, and the previous delegation ceased.

At present the number of Assistant Commissioners who have districts in Ireland is 5.

The general powers of the Commission in Ireland resemble so closely, for the most part, the powers of the Commission in England, that it is unnecessary to state them in detail. Moreover, the rules, orders, and regulations for the government of workhouses, and the guidance of paid officers of the Unions in Ireland, bear such a general resemblance to those which are in force in England and Wales, that they need not be recapitulated on this occasion. But we will close these remarks by mentioning a few points in which the powers of the Commission in Ireland exceed its powers in England.

1st. The appointment of chaplains and auditors is vested in them, and not in the Board of Guardians, as in England.

2ndly. If, after the dismissal of any paid officer, the guardians refuse or neglect to appoint a fit and proper person in his room, the power of appointment devolves upon the Commissioners.

3rdly. Although the Commissioners are expressly precluded from interfering to order relief in any individual case, yet if regular meetings of the Board of Guardians of any Union are not held at the times enjoined by the orders of the Commissioners, or if, through the default of the guardians, their duties at the Board of Guardians are not effectually discharged according to the intention of the Irish Poor Relief Act, the Commissioners have the power of dissolving such Board, and of ordering a new election; and if the new Board of Guardians should in like manner fail to discharge their duties effectually, the Commissioners have the power of appointing paid officers to carry the Act into execution.

In practice, however, they have never had occasion to appoint paid officers; and it is only in two instances that they have dissolved a Board of Guardians.

4thly. In regard to valuers for the poor law survey and valuation, the Commissioners had the power either to appoint or to direct the guardians to appoint professional valuers. In practice the Commissioners almost invariably left these appointments to the guardians, from deference to the principle of local government. It may be doubted, however, whether the valuations would not have been more uniform and more correct, if the appointments had been, in every case, made by the Commissioners.

For further details on the Irish poor law see the following Acts:—1 and 2 Vic., c. 56; 2 Vic., c. 1; 5 and 6 Vic., c. 97; 6 and 7 Vic., c. 92.

[N.B. A well-digested work, published this year by Mr. Arthur

Moore, the chief clerk of the Commission in Ireland, contains, in one volume, all the Acts of Parliament on the subject, and all the general orders of the Commissioners, together with other useful information.\*]

## APPENDIX A.

Table showing the Amount of Building Loans, the Nett Annual Value of Rateable Property, and the Proportions per £. of Loan to Nett Value for each Union in Ireland.

We believe our readers will be well pleased to have before them this lucid account of the existing Irish Poor Law. It is, however, abundantly certain, that very great changes will speedily have to be made in it. With all the defects, it has few or none of the advantages of the existing English poor law; and bears evidence in every part of the source whence it sprung. The Poor Law Commissioners are here, as in England, vested with an authority which it is impossible they can advantageously exercise. The division of the island into 130 Unions, each having a workhouse in its centre, in which alone relief is to be administered to the necessitous, is a device worthy of a Prussian corporal. It might, or it might not, be good policy to limit relief to the aged, infirm, and impotent poor; but, supposing such limitation were expedient, why compel them to resort for that relief to a workhouse? Why not leave this to be determined by the authorities on the spot? If they supposed that a pauper might be more cheaply and better provided for out of a workhouse than in one, why not allow them to have their own way? And because A, B, and C have filled the workhouse, and it will hold no more, will that make a death by hunger by the way side more acceptable to X, Y, and Z? It is common in all parts of Scotland for paupers to be maintained in part, or wholly, on allowances varying from 1s. or 2s., to 3s. or 5s. a week; but were such parties sent to workhouses, they would cost three or four times as much, while the country would be filled with complaints, often well founded, of their mismanagement, and incapacity to afford relief.

The truth is, that the present Irish poor law is inefficient for any good purpose. What Ireland requires is a system that will provide for the wants of those who are destitute, from whatever cause their destitution may proceed; and which shall, at the same time, make it for the interest of the landlords to attend to the welfare of all who live upon their estates. The latter is an indispensable condition; and to the want of such motive to influence the landlords, much of the misery of the lower classes throughout the island is to be ascribed. And to secure these double advantages, the obvious and only effectual plan is to make the landlords responsible for the support of the poor on their estates. If you do this, and leave them at liberty to administer such relief in any way they think fit, you may be assured they will not fail in no very long time to find means for stemming the tide of pauperism, and for improving the condition of the poor.

In saying that the landlords should be made responsible for the sub-  
VOL. II. 2 z

sistence of every individual upon their estates, we mean by landlords, those who have the real property of the land, whether they possess it under interminable or long leases, and who can determine the mode of its management, and not those who may only receive a quit-rent from it. Make the real owners directly responsible for the poor, and give them at the same time, and at whatever cost, easy means of ejecting, without danger to themselves or their agents, those tenants who may divide their holdings, and you will have done all that is necessary. The sagacity of the landlords will do the rest; and they will do it a thousand times better than it can ever be done by any one else. The obligation to support all the individuals settled on their lands, will make even the most inconsiderate proprietors adopt every precaution to prevent the undue increase of cottages and of cottiers, and to lessen their numbers if they be excessive; at the same time that it will prevent them from attempting to effect these objects, as they have hitherto too frequently done, by turning out poor wretches with no alternative except that of starving in ditches or on the road side, or of banding themselves in nocturnal predatory associations. Being bound to provide adequate means of support for the cottiers dismissed from their holdings, till the latter could provide for themselves, the landlords would have to proceed, even in enforcing schemes of improvement, with due deliberation. We should, under such a system, hear no more of wholesale "clearings;" and provision might be made for the cottiers, it was necessary to dismiss, as well as for the other classes of paupers, in a variety of ways, and at but little cost, till they had been absorbed by the increasing demand for labour, or had emigrated to Britain or elsewhere. Let it be proclaimed that the poor are to be supported, *coute qui coute*, by rates levied on the land, and assessed in all cases directly on the landlords; and let it further be proclaimed that the landlords need not look for pecuniary assistance to Parliament, or to any other source; and there cannot be so much as the shadow of a doubt that they will soon learn to assist and protect themselves; and to organise machinery for that purpose. All that is required on the part of the State is to protect them in the fair exercise of their rights, and to compel them to do their duty, by giving an easy appeal to paupers dissatisfied with the decisions of the authorities, (i. e. of the people of property), in the parish, townland, or other division to which they belong.

It is said that a measure of this sort would be equivalent to a confiscation of the land; but in truth and reality it is the only means by which it would appear possible that its confiscation can be prevented. Does any one suppose that, if the existing state of things be permitted to run its full course, rents will also continue to be paid? They are already on the verge of destruction; and can only be secured by providing other means for the protection of the peasantry against the extreme of want, than the possession of small patches of land. But, independently of these important considerations, when under the present system, any circumstance occurs to deprive any considerable number of the people of their accustomed means of subsistence, they are, as at present (December, 1846), employed on public works, under the superintendence of Government servants, by means of money advanced by the Treasury, to be repaid by the landlords. But it is needless to say

that, however well it may be administered, this cannot be otherwise than a most wasteful and improvident mode of providing relief. The public works on which the poor are employed are often unnecessary; and when they are necessary they cost two or three times as much as they would do were they constructed in the ordinary way. This plan, too, has the further and very serious disadvantage of interfering with the ordinary employments of the people, and of withdrawing them from husbandry labour, at the very time when, perhaps, it is most necessary it should be carried on. And to crown all, the landlords are to repay the Treasury the vast sums thus improvidently expended. No doubt they all but universally flatter themselves with the belief that this condition will not be enforced; and that England will not demand payment of her just claims. In this, however, they may be disappointed. And it is to be hoped that the people of England may at length become sensible, that there is no real charity or benevolence, but the reverse, in taxing themselves, and subjecting their own poor to serious privations, that the landlords of Ireland may be exempted from burdens which are borne by every landlord in England; and the imposition of which is indispensable to their own well-being, as well as that of the Irish people.

Among the various projects that are every now and then brought forward for the employment of the Irish poor, that for the culture of the waste lands is, perhaps, the greatest favourite. We believe, however, that it is in all respects one of the most objectionable that could be devised. The waste lands of Ireland consist almost wholly of mountain and bog, both of which are nearly unsusceptible of cultivation. No doubt they may, in the course of time, be gradually brought, to some extent at least, under tillage, by means of labour and manure supported upon, and derived from the contiguous grounds. But any attempt to force them suddenly into cultivation on a large scale, would be attended with an enormous expense, and would, we are bold to say, be a complete failure. There is not the least reason to think that with our present means and appliances, the culture of the great mass of the waste lands of Ireland could be continued, though the gigantic cost of their reclamation, in the first instance, were thrown out of view. What Ireland wants, is not the bringing in of waste lands, but the application of additional capital, and of an improved system of agricultural management, to the lands already under tillage. And this would be more likely to be effected by making an efficient poor law, than by any other means; for it would make the landlords adopt the most energetic measures for checking that subdivision of the land which has been the bane of Ireland, and for introducing improved modes of husbandry. With such a law, the labour of the poor, or of those subsisting on charity, would not be thrown away, as is the case at present. It would be expended on useful works, executed under the eye of those by whom those expenses must be defrayed, and there would, therefore, be comparatively little waste.

At all events, it is obvious that, unless efficient measures be speedily adopted, Ireland will become a vast pauper-warren; a pest to herself, and an intolerable burden upon, as well as a disgrace to England. The introduction of some such system of poor laws as we have indicated,

would, we are well convinced, be the most effectual means of averting this undesirable consummation. That its introduction would be attended with formidable difficulties, it were absurd to deny; but they might be overcome by a Government determined to act on a bold and comprehensive system of policy. The opposition such a project would be sure to encounter from the Irish demagogues, would be the best proof, if such were wanted, of its utility. And though the assistance of an army of 50,000 men, and the subjection of the country to martial law might for a while be necessary to introduce the system, that would be but a small deduction from its many advantages; for, in the end, good order would be established; and the foundations would be laid of an improved system of husbandry, and of improved habits on the part of the gentry and of the peasantry.

#### SECT. 5. *Friendly Societies and Savings' Banks.*

National and individual charity, how ample soever, is but a sorry substitute for the want of a spirit of forethought and providence on the part of the poor. Happily this spirit prevails in a very high degree in England; and a good deal has recently been done to strengthen and extend its influence.

Of the various means that have been suggested in this view, and for enabling the poor to provide a resource against sickness and old age, none seem so likely to accomplish their object as the institution of friendly societies and savings' banks. The former are founded on a principle of mutual insurance. Each member contributes a certain sum, by weekly, monthly, or annual subscriptions, while he is in health; and receives from the society a certain pension or allowance when he is incapacitated for work by accident, sickness, or old age. Nothing, it is obvious, can be more unexceptionable than the principle of these associations. Owing to the general exemption from sickness until a comparatively late period of life, if a number of individuals under 30 or 35 years of age, form themselves into a society, and subscribe each a small sum from their surplus earnings, they are able to secure a comfortable provision for themselves in the event of their becoming unfit for labour. Any single individual who should trust to his own isolated efforts would plainly be placed in an infinitely more hazardous position. Whenever an unfavourable contingency exists, the best and cheapest way of obviating its effects is by uniting with others, each subjecting himself to a small privation, so that none may be overwhelmed by any great calamity. However industrious and frugal, an individual, not a member of a friendly society, might not be able to insure his independence; inasmuch as the occurrence of any accident, or an obstinate fit of sickness, might, by throwing him out of employment, and forcing him to consume the savings he had accumulated against old age, reduce him to a state of indigence, and oblige him to become dependent on the bounty of others. Hence the paramount utility of the societies in question.

For these and other reasons, which our limits will not permit us to state, we are glad to find that friendly societies have been very widely introduced. There were enrolled from the 1st of January, 1793, to the

commencement of 1832, no fewer than 19,783 such societies; of which 16,596 were in England, 769 in Wales, 2,144 in Scotland, and 274 in Ireland. The societies existing in 1815 are said to have comprised 925,429 individuals. We have, however, some doubts as to the authenticity of this statement; but, if it may be depended on, the societies now in existence must comprise above 1,200,000 members! It should also be recollected that the progress of these societies, though great and most honourable to the labouring population of Great Britain, has been not a little counteracted by the ignorance and mismanagement of their officers, and by the real difficulty of establishing them on a secure foundation. The great error has consisted in their fixing too high a scale of allowances. At their first institution they are necessarily composed of members in the prime of life; there is, therefore, comparatively little sickness and mortality amongst them. In consequence their funds rapidly accumulate; and they are naturally tempted to give too large an allowance to those members who are occasionally incapacitated. But the circumstances under which the society is placed at an advanced period are materially different. Sickness and mortality are then comparatively prevalent. The contributions to the fund decline at the time that the outgoings increase; and it has not unfrequently happened that a society has become altogether bankrupt; and that the oldest members have been left, at the close of a long life, destitute of all support from a fund on which they had relied, and to which they had largely contributed.

But the errors in the constitution of friendly societies have been, in a great degree, amended. Various efforts, several of which have been productive of beneficial effects, have been made by private individuals and associations, and by the legislature, to obviate the chances of their failure, and to encourage their formation on sound principles. Two Reports, by committees of the House of Commons, on the laws respecting friendly societies, printed in 1825 and 1827, supply a great deal of important and useful information; and the Reports and tables published by the Highland Society are also valuable. There are, doubtless, several important points that still remain to be satisfactorily cleared up; but, in the mean time, enough has been done to enable Government to interfere with effect in assisting the formation of friendly societies on a solid foundation. In this view several statutes have, at different times, been passed; but the Act 10 Geo. IV. c. 56, repealed all previous statutes, and with the Acts 4 & 5 Will. IV. c. 40, and 7 & 8 Vict. c. 83, embodies the existing law upon the subject. All friendly societies, claiming the benefit of these Acts, are obliged to submit a statement of their rules and regulations for the approval of the officer appointed by Government for that purpose; and in the event of their being approved by him, and of the tables of payments and allowances appearing suitable to the justices, the society is confirmed by the latter, and becomes entitled to the privileges conferred by the Acts in question. These consist in being allowed to invest the funds of the society in Government securities at a minimum rate of interest (*3l. 0s. 10d. per cent.*), and in the funds of savings' banks. But it is, of course, open to any individuals, not seeking any connection with

Government, to establish friendly societies on any terms they may think proper.

*Savings' Banks.*—Though not so well calculated as friendly societies to enable the labouring classes to provide against sickness and old age, savings' banks are very valuable institutions, and are eminently entitled to the public patronage and support. The want of a safe place of deposit for their savings, where they would yield them a reasonable interest, and whence they could withdraw them at pleasure, has formed one of the most serious obstacles to the formation of a habit of accumulation among labourers. Public banks do not generally receive a less deposit than 10*l.*; and there are but very few amongst the labouring classes who find themselves suddenly masters of so large a sum; while, to accumulate so much by the weekly or monthly saving of a few shillings, appears at first view almost a hopeless task; and should an individual have the resolution to attempt it, the temptation to break in upon his little stock at every call of necessity might be too strong to resist. At all events, the progressive addition of interest is lost during the period of accumulation, and it even frequently happens that the chest of the servant or labourer is not safe from the depredations of the dishonest; while the very feeling of insecurity which such a circumstance inspires, must operate as a fatal check to habits of saving. A similar effect results from the instances that have often occurred, where those poor persons who had, in despite of every discouragement, accumulated a little capital, have been tempted by the offer of a high rate of interest, to lend it to persons of doubtful characters and desperate fortunes, whose bankruptcy has involved them in irremediable ruin. It is plain, therefore, that nothing could be productive of greater advantage, with a view to the formation of those new and improved habits, that must necessarily result from the diffusion of a spirit of frugality and forethought among the poor, than the institution of savings' banks, or places of safe, convenient, and advantageous deposit for their smallest savings. They are no longer tempted, from the want of facility of investment, to waste what little they can save from their expenditure in frivolous or idle gratifications. They now feel assured that their savings, and the interest accumulated upon them, will be faithfully preserved to meet their future wants: and as there are very few who are insensible of the blessings of independence, there is no reason to suppose that they will be slow to avail themselves of the means of accumulation now in their power.

All moneys paid into any savings' bank, established according to the provisions of the Act 9 Geo. IV. c. 92, and the 7 and 8 Vict. c. 83, are to be paid into the banks of England and Ireland, and vested in bank annuities or exchequer bills. The interest payable to depositors is not to exceed 3*l.* 0*s.* 10*d.* per cent. per annum. No depositor can contribute more than 30*l.*, exclusive of compound interest, to a savings' bank in any one year; and the total deposits to be received from any one individual are not to exceed 150*l.*; and whenever the deposits and compound interest accruing upon them, standing in the name of any one individual, shall amount to 200*l.*, no farther

interest shall be paid upon such deposit. The number of depositors in savings' banks, in England, Wales, and Ireland, on the 20th of November, 1834, amounted to 499,207, and the deposits to 15,369,844*l.*, giving an average deposit of 30*l.* 16*s.* to each. We subjoin an—

*Account exhibiting a Summary View of the Number and State of the Savings' Banks of England, Scotland, Wales, and Ireland respectively on the 20th November, 1845.*

The well-established system of banking that has long existed in Scotland, and the practice adopted by all the Scotch banks, of receiving deposits of the amount of 10*l.*, and sometimes less, and paying interest on them at about 1 per cent. below the market rate, accounts for the comparatively small amount of the investments in savings' banks in that country. It has, as it were, extended the advantages of the savings' bank system to all classes of the community, and has, in consequence, contributed materially to diffuse a spirit of economy

and accumulation among the middle and upper, as well as the lower classes. The aggregate deposits in the different Scotch banks may, at this moment, be estimated at from 28,000,000*l.* to 30,000,000*l.*, producing an interest of about 3*l.* per cent. : and we believe it may be safely affirmed that, but for the facilities of accumulation afforded by the Scotch banking system, the half of those deposits would never have existed ! It is to be regretted that the Bank of England gives no interest on deposits either at the head office in the metropolis, or at any of her branches. Perhaps she has good reasons for declining to undertake the responsibility that the receiving of deposits at interest in the metropolis would, undoubtedly, bring along with it. But if she could, consistently with her own security, receive deposits on the plan followed by the Scotch banks, it would be productive of the greatest advantages ; and would do more to promote accumulation than could be done by any other measure it seems practicable to suggest.

*Savings' Bank Annuities.*—Within these few years Government has adopted the principle of selling immediate or deferred annuities, of not less than 4*l.*, or more than 30*l.* a year, to the labouring classes not under 15 years of age. Such annuities are sold under the provisions of the Act 3 & 4 Will. IV. c. 14, and 8 Vict. c. 83. The purchaser may either pay down the whole sum at once, or he may pay it by weekly, monthly, or yearly instalments. And, to encourage parties to buy, it is provided, that if an individual become unable to continue his payments, or die before the deferred annuity commences, all the sums he has paid are to be returned, without interest, to his executors or family. All negotiations for annuities of this description are to be conducted through savings' banks, and hence their name.

Much, though, as it appears to us, little deserved, eulogy has been lavished upon this statute. No doubt it was dictated by the best intentions on the part of Government, and it may, occasionally, be advantageous to the parties. Still, however, we cannot help considering the principles on which it is bottomed as radically unsound. If Government will interfere in such matters, its object should be to diffuse a spirit of accumulation and forethought into all classes, and, in as far as possible, to make people live for others, as well as for themselves. But the Savings' Banks Annuity Act proceeds on entirely opposite principles. So far as it extends, its influence is subversive of accumulation, and goes to encourage the selfish and unsocial propensities, by tempting individuals to consume their whole property during their lifetime, without thinking or caring anything about those who may come after them. One of the grand objections to the method of borrowing formerly practised in France was, that the debt was principally funded in *rentes viagères*, or life annuities, and consequently that it tended to keep up and diffuse spendthrift and careless habits. The influence of the system now alluded to, though less in degree, is precisely of the same kind. Had Government given facilities to the middle and lower classes for insuring sums for their wives and children, in the event of their death, it might have been highly advantageous. But the system they have set on foot does not encourage providence, but extravagance ; and, if extensively acted upon, would be so very hostile

to the public interests that it would have to be put down by legislative interference.

*Private Charities.*—Exclusive of the immense sums raised by compulsory assessment, there is no country in which such large sums are voluntarily subscribed for the support and education of the poor as in England. It appears from the summary of the returns annexed to the Reports of the Charity Commissioners, that the rent of the land and other fixed property, and the interest of the money left for charitable purposes in England and Wales, amounts to 1,209,396*l.* a year. It is believed by those best qualified to judge correctly of such matters, that with proper management this return might be increased to, at least, 2,000,000*l.* And, supposing such to be the case, still there can be no reasonable doubt that even that large sum would be far below the sums annually expended in voluntary donations to charitable establishments, and in gifts to individuals. In all parts of the country, hospitals, dispensaries, schools, and all descriptions of miscellaneous charities, are supported by such means. A mere catalogue of the names of such charities in London and other large towns would occupy a considerable space. A good deal of jobbing and abuse is believed to have insinuated itself into not a few of these establishments: but, speaking generally, they are well managed, and have been productive of much good. No estimate can be formed of the sums expended in voluntary donations to individuals, but in the aggregate, they cannot fail to amount to an immense sum.

#### CHAPTER IX.—ORIGIN AND PROGRESS OF THE ENGLISH LANGUAGE.

A GREAT portion of Europe was at a remote period inhabited by wandering tribes of Celts, whom we may suppose to have been as uncivilised as the savage tribes who now inhabit the interior of Africa. Their early progress in Britain and Ireland may in some measure be ascertained from the records of history: but the rudest nations, although they furnish materials for history, do not themselves produce historians; and, when all other memorials have utterly decayed, we are sometimes enabled, by the names which they have permanently affixed to some of the great objects of nature, to trace their progress with as much certainty as the hunter of the forest can trace the footsteps of his prey. When we find rivers, mountains, and promontories described by Celtic names, in a country or district where history has never mentioned the settlement of a Celtic horde, we are at no loss to account for such names: we are satisfied with the application of a single hypothesis, and instantly arrive at the conclusion that Celtic names must have been imposed by Celtic inhabitants.

When the Romans invaded the south of Britain, they found the country possessed by people of this generic origin. The invasion took place about fifty-five years before the Christian era; and the invaders retained their ascendancy till the commencement of the fifth century. During this interval the Romans imparted to the rude na-

tives some tincture of their own intellectual refinement, but must have left the British language as they found it: the foreign settlers were not sufficiently numerous to produce any change in the speech of the original inhabitants. When the Roman empire was tottering to its fall, the Britons recovered their independence. They divided themselves into many petty states, and exercised many petty animosities, which impaired the national strength, and rendered them an easy prey to foreign invaders. The pirates of Saxony had long been accustomed to make occasional depredations on their coasts. The Picts and Scots, that is, the Goths and Celts of Scotland, infested them from the north; and at length the sense of common danger produced some degree of union in their councils and exertions. In this condition of their affairs, the Saxons obtained a permanent footing in the country. In the year 449, as the Saxon Chronicle informs us, "Hengist and Horsa, invited to his aid by Vortigern, King of the Britons, arrived in Britain in the place called Ipwinesfleet: they first came to the assistance of the Britons, but afterwards fought against them. The king directed them to fight against the Picts, and they did so, and were victorious wherever they came. They then sent to the Angles, and desired them to send more assistance, telling them of the worthlessness of the Britons, and the fruitfulness of the land. They then sent to them more assistance; then came men from three provinces of Germany, from the Old Saxons, from the Angles, from the Jutes."\*

The Saxons, like other Gothic tribes, derive their origin from a mighty horde which wandered from the east, and gradually overran the best portions of Europe. So early as the time of Ptolemy the geographer, this particular tribe had proceeded as far to the westward as the banks of the Elbe, and their primitive seat was between this river and the Eyder. Although at first they were not very formidable for their numbers, they gradually obtained a powerful ascendancy in Germany. Towards the middle of the third century, they entered into a league with the Franks for the purpose of opposing the Roman arms; and they afterwards enlarged their connexions and increased their influence, till it predominated in a territory of great extent, reaching from the Eyder to the Rhine. This wide tract of country was not entirely peopled by Saxons; it included various nations, united by the ties of a kindred origin, and actuated by a sense of common interest or danger; but such was the ascendancy of the Saxons, that they communicated their name to the entire confederacy, which, among other nations, comprehended the Jutes, who inhabited the south of Jutland, and the Angles, who inhabited the adjacent district of Anglen. Hengest and Horsa, the leaders whom we have already mentioned, were not Saxons, but Jutes. The subsequent immigrants were for the most part Angles, and their descendants were long distinguished by the appellation of Anglo-Saxons. The first part of the name denotes the predominant tribe; the second denotes the original relation of that tribe to the Saxon confederacy. The new country which they acquired was denominated Engla-land, or the land of the Angles. These Ger-

\* *Saxon Chronicle*, p. 14. Ingram's edit. Lond. 1823, 4to. See likewise *Mr. Turner's History of the Anglo-Saxons*, and *Dr. Bosworth's Elements of Anglo-Saxon Grammar*, p. 279. Lond. 1823, 8vo.

man invaders established themselves in the most fertile districts, and gradually displaced the Celtic inhabitants, till at length they were chiefly confined to the fastnesses of Wales, where the prevalence of the ancient language still indicates the continuance of their race. Eight new states were formed by the Anglo-Saxons, who maintained their independence till the year 1016, when they were subjected to the yoke of a Danish conqueror. Canute and his two sons, Harold and Hardicanute, reigned in England for the space of 26 years. A Danish court, and a Danish army, with other settlers, must have had some influence on the common speech, especially as the language of the conquerors was not very dissimilar to that of the conquered. But the laws and other public documents continued to be written in the Saxon tongue, and this new dynasty soon finished its course. The Saxon line of kings, which was restored in 1042, terminated in 1066, when Harold II. was slain at the battle of Hastings, and William Duke of Normandy ascended the throne of England. The Saxon dominion had thus continued for the best part of three centuries; and as the great body of the people were still of this race, it is obvious that their national language must have survived their political power. A writ in the Anglo-Saxon tongue was issued by Henry the Third, who began his reign in the year 1216.\*

In the language spoken by this ancient people, a great variety of literary reliques has been preserved. "The Anglo-Saxon literature," says Professor Rask, "possesses, in many respects, even for its own sake, no small degree of interest. The numerous ancient laws throw considerable light upon the laws of the old Germans and Scandinavians, as well as upon their customs and civil institutions.† The old chronicles and genealogies are important sources for the ancient history of the Low German and the Scandinavian nations. The various documents illustrate much in English history. Even the theological remains, showing the constitution and doctrine of the ancient church, are not devoid of value for ecclesiastical history, especially to the modern English and Scottish churches. The translation of several parts of the Scriptures may likewise be advantageously employed in biblical researches. But of all, the poetical pieces are the most interesting, especially the great Anglo-Saxon poem, in forty-three cantos, published at Copenhagen, in 1815, by the Royal Archivarius G. J. Thorkelin,‡ which, from its commencement, he has aptly entitled

\* Dr. Wallis has made the following remark on the conqueror's attempt to introduce the Norman language: "Non autem quod aggressus erat, est assecutus; quippe quod Normannorum qui huc advenerant, si ad Anglos quibus immiscebantur comparentur, exiguus erat numerus, qui ideo suam citius amiserunt linguam quam Anglicanam immutare potuerint." (*Grammatica Linguae Anglicanae*, p. xx. edit. Lond. 1765, 8vo.)

† See Dr. Phillips's *Versuch einer Darstellung der Geschichte des Angelsächsischen Rechts*. Göttingen, 1825, 8vo.

‡ *De Danorum Rebus gestis Secul. III. et IV.* Poema Danicum dialecto Anglo-Saxonica. Havniæ, 1815, 4to. A more recent edition may be found in an elegant little volume, published under the following title: *The Anglo-Saxon Poems of Beowulf, the Traveller's Song, and the Battle of Finnes-Burh*; edited, together with a glossary of the more difficult words, and an historical preface, by John M. Kemble, Esq., M.A. of Trinity College, Cambridge. Lond. 1833, 8vo.

*Scyldingis*. This is perhaps the only Angle-Saxon piece possessing value on account both of its matter and style, particularly for the nations of the north; the principal hero being Swedish or Gothic, though the action lies in Denmark." \* This ancient poem, more generally known by the name of *Beowulf*, has been translated into Danish verse by Dr. Grundtvig,† and ably illustrated by the late Mr. Conybeare. ‡

The language of the conquerors became the language of the king's court, and all the courts of law. The pleadings of counsel, and the decisions of judges, were couched in a dialect which is commonly described as Norman French, but which in the mouths of English lawyers became utterly barbarous; and more curious specimens of composition are scarcely to be found, than those which occur in the reports of cases written in a jargon half French half English. Lawyers have in all ages been conspicuous for their stiff adherence, with or without reason, to those forms and maxims in which they themselves have been duly trained. Long after French had ceased to be the language of legal proceedings, they adhered to the practice of reporting cases in the motley dialect used by their predecessors; for, as Blackstone remarks, "the practisers being used to the Norman language, and therefore imagining that they could express their thoughts more aptly and more concisely in that than in any other, still continued to take their notes in law Franch; and, of course, when those notes came to be published, under the denomination of reports, they were printed in that barbarous dialect; which joined to the additional terrors of a Gothic black letter, has occasioned many a student to throw away his Plowden and Littleton, without venturing to attack a page of them." § By the 36 Edw. III., c. 15, it was enacted, that for the future all pleas should be pleaded, shown, defended, answered, debated, and judged in the English tongue, but should be entered and enrolled in Latin. The statutes of the realm long continued to be promulgated in French; and it was only from the accession of Richard III. that Englishmen were governed by laws written in their native tongue. ||

The Norman conquest proved fatal to the entire race of Anglo-Saxon nobility, many of whom lost their lives, and almost all of them their property. Not a few of the number sought refuge in different monasteries. Some of them became abbots, and others closed their career as monks. The lands of the Saxon earls were transferred to the Norman barons, who found it necessary to consult their personal safety by inhabiting fortified towns and castles. They must have had but little intercourse with their vassals, whom they probably did not re-

|| "The reign of Richard III." says Barrington, "is a remarkable epoch in the legislative annals of this country; not only from the statutes having continued from this time to be in the English language, but likewise from their having been the first which were ever printed." (*Observations on the more ancient Statutes*, p. 389.)

spect, and whom they had much reason to fear. They retained their native tongue, and seldom acquired any other. For a long period of time, the peasantry continued unmixed with foreign settlers; they continued to cultivate the same soil; and, when the written language of the kingdom had received many foreign accessions, the rustic dialect preserved its primitive elements with very few material changes. Much of the patois of different countries consists, not in adulterations of the modern, but in remnants of the ancient language. Many Anglo-Saxon words and idioms, unintelligible to persons of a refined education, are still current among the rural population of some particular districts of England.\*

The English monarchs of the Norman race were liberal patrons of such literature as they themselves understood. French poetry appears to have been relished at the court of England; and, according to a very competent judge, M. de la Rue, it was from England and Normandy that the French received the first works which deserve to be cited in their language. The works of many Anglo-Norman poets have been preserved, and they certainly form a curious subject of literary research. In this department, a learned lady, Marie de France, makes a prominent figure. Her poems have recently been edited by M. de Roquefort;† and one of the historical poems of Wace still more recently by M. Pluquet.‡ A history of the Anglo-Norman poets and poetry has just been published by M. de la Rue, who long ago exhibited sufficient evidence of his being well qualified for such an undertaking.§

Of the language spoken by the great body of the people about a century after the conquest, the reader may in some degree, be enabled to judge, from the following specimen of Lyamond's translation of Wace's *Brut d'Angleterre*. The translator describes himself as a priest of Ernlye upon Severn, and he is supposed to have completed his task about the year 1180:—

Tha the masse wes isungen,  
Of chirecken heo thrungen.  
The king mid his folke  
To his mete verde,  
And mucle his dugethe:  
Drem wes on hirede.  
Tha quene, an other halve,  
Hire hereberwe isohte:  
Heo hafte wif-monne  
Wunder ane moni enll.

\* "Provincial words, accompanied by an explanation of the sense in which each of them still continues to be used in the districts to which they belong, would be of essential service in explaining many obscure terms in our early poets, the true meaning of which, although it may have puzzled and bewildered the most acute and learned of our commentators, would perhaps be perfectly intelligible to a Devonshire, Norfolk, or Cheshire clown." *Wilbraham's Attempt at a Glossary of some Words used in Cheshire*, p. 4. Lond. 1826, 8vo.

|| *Ellis's Specimens of the Early English Poets*, vol. i. p. 61.

"When the mass was sung, out of the church they thronged. The king amid his folk to his meat fared, and many of his nobility : joy was in the household. The queen, on the other side, sought her harbour, or lodging : she had wonderfully many women with her." Here, and in a much more ample specimen of the same work, we perceive no mixture of French words. The idiom is essentially Anglo-Saxon, but with some indications of its being already in a state of transition : the vestiges of the language, in its more modern form of English, may be distinctly traced. Of the language in a state more considerably advanced, we find a specimen in a facetious poem published by Dr. Hickee :—

Far in sea, by West Spain,  
Is a land ihote Cokaygne,  
There n' is land under heaven-rich  
Of wel of goodness it y-like.  
Though Paradise be merry and bright,  
Cokaygne is of fairer sight.  
What is there in Paradise  
But grass, and flower, and green rise ?  
Though there be joy and great dute,  
There n' is meat but fruit ;  
There n' is hall, bure no bench,  
But water manis thirst to quench.\*

In this poem, which apparently belongs to the thirteenth century, we perceive a further deviation from the Anglo-Saxon idiom. In the preceding extract, the obsolete spelling is not retained, and the language is thus rendered more intelligible ; but, as it is likewise necessary to exhibit the progress of orthography, we have not in other instances adhered to the same practice. The subsequent quotation is from a metrical history of England, written by Robert, a monk of Gloucester, who appears to have lived after the year 1278. This rhyming chronicle, as Mr. Warton has remarked, is totally destitute of art or imagination. The author thus describes the island of Ireland, nor does he fail to mention its exemption from venomous reptiles :—

Yrlond ys aler yle best with oute Engelonde.  
The see goth al abouten hym eke as ich vnderstonde.  
More he ys than Engolond, and in the south half he ys  
Bradder and more of ynow than in the north ende y wis.  
Ageyn the lond of Spayne he stood in the north syde rygt.  
Selde snowe ther inne lith, and nameliche thre nygt.  
So euene hot at that lond ys, that men durre selde  
Here orf in howse awynter brynge out of the felde.  
Lese lasteth ther al the wynter : bute hyt tho more wonder be,  
Selde we schal in the lond eny foule wormes se :  
For nedres ny other wormes ne mow ther be nogt ;  
And gef he beth thider bi cas from other londs y brogt,  
Heo dyeth thorȝ smel of the lond, other thorȝ towching y wys :  
Eche gras that ther inne wexeth a ȝeyn venym yt ys.

\* *Hicessii Linguarum Vett. Septentrionalium Thesaurus*, tom. i. p. 231. *Ellis's Specimens*, vol. i. p. 83.—"This poem," says Mr. Boucher, "begins with the description of the land of voluptuous indolence ; which it is hardly possible to read without being reminded of *Thomson's Castle of Indolence*. Admitting, however, that the author of the *Seasons* may have seen this ancient piece in Hickee, the manner in which he has imitated it does him more credit, as a man of judgment and good taste, than discredit on the score of a want of originality." (*Introduction to a Glossary of Obsolete and Provincial Words*, p. xl.)

For men that ben venymed, thorg gras of Yrlond  
 Y dronke he beth y clansed sone, thoru Godes sonde.  
 Hony and mylk ther ys muche, mony folk and bolde.  
 This ys the stat of Yrlond, as iche habbe y told.\*

Another chronicler, who however belongs to a period somewhat more recent, was Robert Manning, more commonly called Robert of Brunne. He has himself stated that he had resided 15 years at Brunne, or Bourne, in the priory of black canons, where in the year 1303 he began his translation of Grosteste's *Manuel des Péchés*. This version still continues in manuscript; but one portion of his historical work, his translation from Langtoft, has been edited by the indefatigable Hearne, who rendered a similar service to Robert of Gloucester. The inedited portion consists of a translation from Wace's *Brut*. Peter Langtoft was an Augustine canon of Bridlington, in Yorkshire, and is supposed to have died in the reign of Edward II. The subsequent passage relates to Sir William Wallace:—

Whan Sir Jon of Warene the soth vnderstode,  
 That the Waleis gan brenne. an oste he gadred gode,  
 And went to Strielyne agayn Waleis William,  
 Bot the erle with mykelle pyne disconfite away nam;  
 And that was his folie, so long in his bed gan ligge,  
 Untille the Waleis partie had vmbilaid the brigge:  
 With gaulokes and dartes suilk ore was non sene,  
 Myght no man tham departe, ne ride ne go bituene.  
 Thore first tham tauht how thei did Fawe kirke:  
 Alle gate the brigge he rauht, of nouht our men were irke,  
 Whan the erle herd say, the brigge how William toke,  
 He doutet to die that day, that bataile he forsoke.  
 The Inglis were alle slayn, the Scottis bare tham wele  
 The Waleis had the wayn, als maister of that eschele.  
 Al that ilk stoun was slayne on our side  
 God men of honour, that wald to the bataile bide.†

A more curious specimen of composition is to be found in the *Vision of Piers Plowman*, which appears to have been written about the year 1362, and which is commonly ascribed to Robert Langland, a secular priest. The work, which comprehends a series of visions, is replete with satire on the different orders of men, especially on the clergy, both regular and secular; but it is likewise diversified by a succession of incidents, and furnishes abundant evidence of the author's talents for description. His mode of versification is not unworthy of particular notice. It was employed by the Icelandic as well as by the Anglo-Saxon poets, and was constructed with some degree of nicety. Their lines are generally short, and they do not rigorously confine themselves to a definite number of syllables. Here alliteration supplies the place of rhyme: the corresponding sounds are at the commencement, not at the termination of words. In two contiguous and connected lines, there must be three words beginning with the same letter; and, according to the strictest rule, two of those words ought to occur in the first, and the other ought to begin the second line. It was on such a model that this poet constructed his verses, though he has not observed all the niceties of his predecessors. In the editions,

\* *Robert of Gloucester's Chronicle*, vol. i. p. 43.

† *Peter Langtoft's Chronicle*, as illustrated and improved by Robert of Brunne, vol. ii. p. 297.

and indeed in the manuscripts of his poem, what is exhibited as a single verse is in reality a distich, and admits of a division without any degree of violence.\* Our extract from this remarkable work must necessarily be very brief:—

And to the church gan ich go, God to honourie,  
 By for the crois on my knees knocked ich my brest,  
 Sykinge for my sennes, segginge my Pater noster,  
 Wepying and wailinge tyl ich was a slepe:  
 Thenne mete me moche more than ich by for tolde  
 Of the mater that ich mete fyrst on Malverne hulles.  
 Ich sawe the feld ful of folk fram ende to the other,  
 And Reson revested ryght as a pope,  
 And Conscience his cocer by fore the kyng stonde.  
 Reson reverentliche by for al the reame  
 Prechede and provide that thuse pestilences  
 Was for pure synne to punyshe the puple;  
 And the south west wynd on Saturday at eve  
 Was pertliche for prude, and for no poynt elles.  
 Piries and plomtrees were poffed to the erthe,  
 In ensample to syggen ous we sholde do the betere:  
 Beches and brode okes weren blowe to the grounde,  
 And turned upward here tayl, in tokenyng of drede  
 That dedlych synne er domys day shal for do us alle.†

After these specimens of verse, we shall exhibit a specimen of prose, selected from the seventh chapter of the Acts of the Apostles, as translated by John Wycliffe. The translator, who was born about the year 1324, and died in the year 1384, may be regarded as the father of English prose. He was the author of various works in Latin as well as English; but the most important of his literary labours was a complete version of the Scriptures. He was the great precursor of Luther, who appeared after an interval of 150 years; and it may perhaps be safely affirmed, that to him the cause of reformation was more deeply indebted than to Luther himself:—

“ This Moises ledde hem out, and dide woundris and signes in the lond of Egipte, and in the Reed See, and in desert fourti gheeris. This is Moises that seide to the sones of Israel, God schal reise to ghou a prophete of ghoure britheren; as me ghe schulen heere him. This it is that was in the chirche in wildirnesse with the aungel that spak to him in the mount Syna and with our fadris, which took wordis of lyf to ghyue to us: to whom oure fadris wolden not obeie, but puttiden him awei, and weren turned awei in hertis into Egipte, seiyng to Aaron, Make thou to us goddis that schulen go bifore us; for to this Moises that led us out of the lond of Egipte, we wite not what is don to hym. And thei maden a calf in tho daies, and offriden a sacrifice to the mawmet, ‡ and thei weren glad in the

\* *Rask's Grammar of the Anglo-Saxon Tongue*, p. 135. *Conybeare's Illustrations of Anglo Saxon Poetry*, p. 65. See the new edition of the *Encyclopædia Britannica*, vol. viii. p. 270.

† *Vision of Piers Plouhman*, p. 81, Whitaker's edition. Lond. 1813, 4to. Dr. Whitaker has remarked, that “Spenser, in his great work, was deeply indebted to Langland, especially for his personification of the vices.”

‡ The ignorance and zeal of our ancestors converted Mahomet into a demon. *Maumetry* is frequently used to denote idolatry, and *maumet* to denote an idol. The Mahometans were regarded as idolaters; and it must have been supposed that they worshipped the founder of their faith. “Certes be it wife, be it chylde, or

workis of her hondis; and God turnyde and bitook hem to serue to the kynghthood of heuene; as it is writen in the book of prophetis, Whether ghe hous of Israel offriden to me slayn sacrifices, either sacrifices of oostis fourti gheer in desert? And ghe han take the tabernacle of Moloch, and the sterre of ghoure god Renfam, figuris that ghe han maad to worschipe hem: and I schal translate ghou into Babiloyne. The tabernacle of witnessyng was with oure fadris in desert, as God disposide to hem, and spak to Moises, that he schulde make it aftir the fourme that he saigh: which also oure fadris taken with Ihesu, and broughten into the possessioun of hethene men, which God puttide awei for the face of oure fadris til into the daies of Dauid, that foond grace anentis God, and axide that he schulde fynde a tabernacle to God of Iacob. But Salamon bildide the hous to him. But the high God dwellith not in thingis maad bi hond, as he seith by the prophete, Heuene is a seete to me, and the erthe is the stool of my feet; what hous schulen ghe bilde to me? seith the Lord; either what place is of my restyng? whethir myn hond made not all these thingis?" \*

Contemporary with Wycliffe was Geoffrey Chaucer, who is commonly regarded as the father of English poetry, and who closed his life in the year 1400. Dr. Johnson has remarked, that "he may, perhaps, with justice, be styled the first of our versifiers who wrote poetically." † He was a man of original genius, improved by a familiar acquaintance with writers in several languages. For the native poets who preceded him, he appears to have entertained but little respect: he sought for better models among the Latin, Italian, and French writers, and in all these languages he found works which he either translated or imitated. He possessed a lively fancy, and was a shrewd observer of life and manners. He improved the language, and refined the taste of his contemporaries. In several of his compositions, he adopted a species of verse, which seems peculiarly suitable to English poetry, ‡ and he taught them to write, if not with new harmony, at least with new terseness. The work by which he is best known are his *Canterbury Tales*; and in these he not only exhibits many characteristic delineations of manners, but likewise evinces a rich vein of native humour. They commence with the following verses, which we have selected on account of the elaborate analysis to which they have been subjected by Mr. Tyrwhitt: §—

anye worldly thyng, that he loueth before God, it is his *maumet*, and he is an ydolaster." (*Chaucer's Works*. f. cxliii. b. edit. Lond. 1542, fol.)

Lat Virgil hald his *maumentis* till him self,  
I wourschipe nowthir ydole, stok, nor elf.

DOUGLAS'S Virgil, p. 311.

\* *New Testament*, translated by Wiclif, p. 196. Baber's edit. Lond. 1810, 4to.

† *Johnson's History of the English Language*, prefixed to his Dictionary.

‡ "By far the most considerable part of Chaucer's works is written in that kind of metre which we now call the heroic, either in distichs or in stanzas; and as I have not been able to discover any instance of this metre being used by any English poet before him, I am much inclined to suppose that he was the first introducer of it into our language." (*Tyrwhitt's Essay on the Language and Versification of Chaucer*, p. 83.)

§ *Canterbury Tales of Chaucer*, vol. iv. p. 106. Lond. 1775, 5 vols. 8vo.

Whanne that April with his shoures sote  
 The droughte of March hath perced to the rote,  
 And bathed every veine in swiche licour,  
 Of whiche vertue engendred is the flour;  
 Whan Zephirus eke with his sote brethe  
 Enspired hath in every holt and hethe  
 The tendre croppes, and the yonge sonne  
 Hath in the Ram his halfe cours yronne,  
 And smale foules maken melodie,  
 That slepen alle night with open eye,  
 So priketh hem nature in hir corages;  
 Than longen folk to gon on pilgrimages,  
 And palmeres for to seken strange strondes,  
 To serve halwes couthe in sondry londes;  
 And specially, from every shires ende  
 Of Englelond, to Canterbury they wende,  
 The holy blisful martyr for to seke,  
 That hem hath holpen whan that they were seke.

In the English language, as it thus appeared in the fourteenth century, the Anglo-Saxon vocabulary was still predominant, but the words had been greatly curtailed in their inflexions. This plan of simplifying the structure of speech is to be traced in other instances, where a rude or a strange race is mingled with a people who have cultivated a more complex language, bearing little or no resemblance to their own. The most essential part of the vocabulary may be acquired without much difficulty; but it is not so easy to become acquainted with the inflexions of nouns and verbs, or with some other niceties which belong to language in its more complicated form. The modern languages of Italy, France, Spain, and Portugal, were all formed of similar materials: the words of each are to a great extent derived from the ancient Latin, but are blended with words of a different origin, words imported by the barbarous tribes who dismembered the Roman empire; and in all these languages, the most material rules of grammar seem to be in a great measure the same. The Latin terminations were altered or retrenched; the vowels were very frequently interchanged; the definite article was formed from the first or the second syllable of the pronoun *ille*; and the introduction of auxiliary verbs completed this transformation of one language into another.

Many French words had now been incorporated with the English language; but the composition of this period began to be marked by an affectation of words derived immediately from the Latin. If Chaucer did not set the example, he at least followed it; and when he aims at a more ornamental style, his use of such phraseology is sufficiently copious. In this respect he was, however exceeded by some of his successors, particularly Hoccleve, Lydgate, and Hawes, who inherited no portion of his strength and originality. Being deficient in taste as well as genius, they devised a verbose and languid style, interspersed with many sonorous and polysyllabic terms, with terms "aureate and mellifluate," which did not assimilate with their native tongue. The same false taste was at length communicated to the Scottish poets. Dr. Nott has remarked, that Barbour had given his countrymen a fine example of the simple energetic style, which resembled Chaucer's best manner, and wanted little to make it the

genuine language of poetry ; and that other poets of the same nation, particularly James I. and Henryson, adhered to this model of a simple diction, and affected no other ornament than what the proper use of their language supplied. But, ultimately the false taste which had infected the English poets, was communicated to their brethren of the north. "Thus Dunbar," he adds, "a poet of a rich and lively fancy, and possessing great natural command of language, was induced to use the following pedantic language in the opening to his beautiful moral poem, called the *Golden Terge*."\* And of this poem he subjoins the first stanza.

Gower and Lydgate, whose names are very frequently mentioned with that of Chaucer, are well known to the readers of our early poetry. Thomas Hoccleve, whom his editor supposes to have been born about the year 1370, makes a more inconsiderable figure in the literary annals of that age, but he seems nevertheless to claim a passing notice. He was deficient in the essential qualifications of a poet ; and, in the opinion of Mr. Warton, "his chief merit seems to be, that his writings contributed to propagate and establish those improvements in our language which were now beginning to take place."† One of his poems opens with these stanzas :—

O precious tresor incomparable,  
O ground and roote of prosperitee,  
O excellent riches commendable  
Aboven alle that in eerthe be,  
Who may susteine thyn adversitee?  
What wight may him avante of worldly welthe,  
But if he fully stand in grace of thee,  
Eerthely god, piler of lyf, thou helthe?  
Whil thy power and excellent vigour,  
As was plesant un to thy worthynesse,  
Regned in me, and was my governour,  
Than was I wel, tho felte I no duresse,  
Tho farsid was I with hertes gladnesse ;  
And now my body empty is, and bare  
Of joie, and ful of seekly hevynesse,  
Al poore of ese, and ryche of evel fare.‡

The greater part of the fifteenth century was highly unfavourable to the progress of literature in England. The repeated contests for the crown, and the civil wars which they occasioned, were attended with a great waste of human blood, and with that uncertainty of possession, and those reverses of fortune, which leave the mind but little relish for such pursuits as are chiefly calculated to gratify the taste. Of the prose composition of that period we select a specimen from Sir John Fortescue's treatise on monarchy. The author was Chief Justice of the King's Bench in the reign of Henry VI., and, during the exile of that unfortunate monarch, appears to have acted as his Chancellor.

"For that cause, and for grete necessitie which the French kyng had of goods, for the defence of that lond, he took upon hym to set

\* *Nott's Dissertation on the State of English Poetry before the Sixteenth Century*, p. cxc.

† *Warton's Hist. of English Poetry*, vol. ii. p. 348. Price's edit.

‡ *Poems by Thomas Hoccleve*, p. 27. Lond. 1796, 4to.

talys and other impositions upon the commons, without the assent of the three estats; but yet he would not set any such chargs, nor hath set upon the nobles, for feare of rebellion. And because the commons, though they have grutchid, have not rebellid, or be hardy to rebell, the French kyngs have yearly sythen sett such chargs upon them, and so augmented the same chargis, as the same commons be so impoverishid and distroyd, that they may unneth lyve. They drynke water, they eate apples, with bred right brown made of rye. Thay eate no flesche, but if it be selden a litill larde, or of the entrails or heds of bests sclayne for the nobles or merchaunts of the lond. They weryn no wollyn, but if it be a pore cote under their uttermost garment, made of grete canvas, and cal it a frok. Their hosyn be of like canvas, and passen not their knee; wherefor they be gartrid and their thyghs bare. Their wifs and children gone bare fote; they may in non otherwyse lyve. For sum of them, that was wonte to pay to his lord for his tenement, which he hyrith by the yere, a scute, payyth now to the kyng, over that scute, fyve skuts; wher thrugh they be artyd by necessite so to watch, labour, and grub in the ground for their sustenance, that their nature is much wastid, and the kynd of them brought to nowght."\*

Sir Thomas More, another Chancellor, who was beheaded in the year 1535, was distinguished alike by his talents and his learning. He has left many works in English and Latin, in prose and verse; and, if his mind had been less encumbered with bigotry, he might have left to posterity the character of a great man. The following passage occurs in a work in which he laboured to prop the tottering cause of popery:—

"But to the entente ye shall yet the lesse doubt what good fruyte was intended by this translacyon, and easily iudge your selfe whyther it was well worthy to be burned or not, ye shall vnderstande that there hath ben synce that tyme another boke made in Englyshe, and imprinted, as it sayth, in Almayne, a folyshe raylynge boke agaynst the clergy, and moche parte made in ryme; but the effecte therof was all agynst the masse and the holy sacrament. In this boke, the maker rayleth vpon all them that caused Tyndals translacyon of the Newe Testament to be burned, sayeing that they burned it bycause that it dystroyed the masse. Wherby ye may se that he rekened that translacyon very good for theyr purpose towarde the destruccyon of the masse. By Saynt Mary masse, quod your frende, that boke is a shrewd glose for the other. For it shewed a cause for whiche it was well worthy to be burned, and the maker with it, if it were made to destroy the masse. But who made that seconde boke? Forsothe, quod I, it appereth not in the boke. For the boke is put forth namelesse, and was in the begynnyng rekened to be made by Tyndall. And whyther it so were or not, we be not yet very sure. How be it syth that tyme Tyndall hathe put oute in his owne name another boke entytled Mammona, whiche boke is very Mammona Iniquitatis, a very treasury and well spryng of wyckednes. And yet hath he sythens put forth a worse also, named the Obedyence of a Crysten Man, a

\* *Fortescue's Difference between an absolute and limited Monarchy*, p. 17. Lond. 1714, 8vo.

boke able to make a Crysten man that wolde byleue it leue of all good Crysten vertues, and lese the meryte of his Crystendom."\*

The life of this eminent person has been written by his son-in-law, William Roper, in a manner very affectionate and interesting, and in a style of touching simplicity. Of his mode of writing the subsequent extract supplies a specimen :—

"When Sir Thomas More came from Westminster to the Tower-ward againe, his daughter, my wife, desirous to see her father, whome she thought she should never see in this world after, and alsoe to have his finall blessinge, gave attendance about the Tower wharffe, wheare she knewe he should passe before he could enter into the Tower. Theare tarryeing his comminge, as soone as she sawe him, after his blessinge upon her knees reverently received, she hastinge towards him, without consideracion or care of her selfe, pressinge in amongst the midst of the thronge and companie of the garde that with holbards and bills went round about him, hastelie ranne to him, and theare openlie in sight of them imbraced him, and tooke him about the neck, and kissed him. Who well likinge her most naturall and deere daughterlie affeccion towards him, gave her his fatherlie blessinge and manie godlie words of comfort besides. From whome after she was departed, she not satisfied with the former sight of him, and like one that had forgotten herselfe, beinge all ravished with the entire love of her father, havinge respect neither to her selfe, nor to the presse of people and multitude that weare theare about him, suddainlie turned backe againe, ranne to him as before, took him about the necke, and divers times kissed him lovinglie, and at last with a full and heavie heart was faine to depart from him : the beholdinge whearof was to manie that weare present soe lamentable, that it made them for verie sorrow thearof to weepe and mourne."†

Thomas Cranmer, Archbishop of Canterbury, who was born in 1489, and was committed to the flames in 1556, had a vigorous understanding, improved by extensive learning. His travels and studies had rendered him as familiar with the French, Italian, and German, as with the Latin, Greek, and Hebrew languages. In theology and the canon law he appears to have been deeply skilled ; and, possessing an acute intellect and a clear head, he was capable of applying his various stores of knowledge to the most useful and practical purposes. His works, as the subsequent extract may partly evince, afford a very favourable specimen of the English style of that period :—

"Nowe the nature of man beyng euer prone to idolatry from the begynnynge of the worlde, and the papistes beyng ready by al meanes and policy to defend and extoll the masse for their estimation and profite, and the people beyng supersticiously enamored and doted vpon the masse (bycause they take it for a present remedy against al manner of euyls), and part of the princes, beyng blinded by papistical doctrine, part louing quietnesse, and lothe to offende their clergy and subiectes, and all beyng captiue and subiecte to the Antichrist of

† *Roper's Life of Sir Thomas More*, p. 113, edit. Chiswick, 1817, 8vo.

Rome, the state of the world remaynyng in this case, it is no wonder that abuses grewe and encreased in the church, that superstition with ydolatrie were taken for godlynes and true relygion, and that many thyngs were brought in without the authoritye of Chryste. As purgatory, the oblation and sacrificyng of Christ by the priest alone, the application and appointyng of the same to such persones as the priest would syng or say masse for, and to such abuses as they could deuise, to deliuer some from purgatory and some from hel (if they were not there finally by God determinyd to abide, as they termed the mattier), to make raine or fayre wether, to put awaye the plague and other syckenesses both from man and beast, to halowe and preserue them that went to Jerusalem, to Rome, to Saincte James in Compostella, and to other places in pilgrimage, for a preseruatiue against tempest and thunder, against peryls and daungers of the sea, for the remedye against morren of cattell, against pensiuenes of the hearte, and against all maner of affliction and tribulations. And finally, they extol their masses farre aboue Christes passion, promisyng manny thynges thereby whiche were neuer promised vs by Christes passion: as that if a man heare masse, he shall lacke no bodily sustenance that day, nor nothyng necessarye for him, nor shall be letted in his iourney, he shall not lose his sight that day, nor dye no sodaine death, he shall not waxe old in that tyme that he heareth masse, nor no wicked spirites shal haue power of him, be he neuer so wicked a man, so long as he loketh upon the sacrament. All these foolish and diuelishe supersticions the papistes of their owne ydle braine haue deuised of late yeares, which deuises were neuer knowen in the olde church.\*

Sir Thomas Elyot, who died in 1546, was another individual who acquired distinction by his literary attainments during the reign of Henry VIII. Of the language and style of that period, he supplies the following specimen:—

“ Good Lorde, how many good and clene wyttes of chyl dren be nowe a dayes perished by ignoraunt schole maysters! How lyttle substantiall doctryne is apprehended by the fewenesse of good grammariens! Notwithstanding, I know that ther be som wel lerned, whych haue taught, and also doe teache, but God knoweth a few, and they with smal effect, hauing therto no comfort; theyr aptest and most propre scholers, after they be well instructed in speakyng Latine, and vnderstandyng some poetes, beyng taken from theyr schoole by theyr parentes, and either be brought to the court, and made lakayes or pages, or elles are bounden prentyses, wherby the worshyp, that the mayster aboue anye rewarde couayteth to haue by the praise of his scholer, is vtterly drowned. Wherof I haue harde schoole maisters, very wel lerned, of good ryght complayne. But yet (as I sayd) the fewnesse of good grammariens is a great impediment of doctrine. And here I wold the reders shulde marke that I note to be few good grammariens, and not none. I call not them grammariens whiche onely can teache or make rules, whereby a chylde shall onely learne to speake congrue Latyn, or to make syxe verses standyng on one foote, wherein perchaunce shalbe neyther sentence nor eloquence.

\* *Cranmer's Defence of the true and catholike Doctrine of the Sacrament of the Body and Bloud of our Sauour Christ*, f. 115. b. Lond. 1550, 4to.

But I name hym a grammarien, by the autoritee of Quintilian, that spekyng Latine elegantly, can expound good authours, expressing the inuencion and disposition of the matter, their style or fourme of eloquence, explycatyng the fygures, as well of sentences as wordes, leuyng nothyng, person or place, named by the authour, vndeclared or hydde from his scholers.”\*

John Poynt, successively Bishop of Rochester and Winchester, was born about the year 1516, and died in exile in the year 1556. He is the author of several works; but the most remarkable of them is a political treatise, in which he anticipated the bold speculations of Buchanan and Languet relative to the right of resisting and punishing tyrants. From this treatise we extract the subsequent passage:—

“ This is the frute, wher princes take all their subiectes thinges as their owne. And wherunto at leingth will it come, but that either they must be no kinges, or elles kinges without people? which is all one. But thou wilt saie, wherof cometh this common saieng, all thinges be the kaisers, all thinges be the kinges? It can not come of nothing. But by that that is all ready saied, ye see that euery man maie kepe his owne, and none maie take it from him; so that it can not be interpreted, that all thinges be the kaisers or kinges, as his owne propre, or that they maie take them from their subiectes at their pleasure; but thus it is to be expounded that they ought to defende that euery man hath, that he maie quietly enioie his owne, and to see that they be not robbed or spoiled therof. For as in a great mannes house all thinges be saied to be the stuardes, bicause it is committed to his charge, to see that euery man in the house behaue him selfe honestly, and doo his duetie, to see that all thinges be well kept and preserued, and maie take nothing awaie from any man, nor misspend or waste, and of his doinges he must rendre accompt to his lorde for all; so in a realme or other dominion, the realme and countreie are Goddes, he is the lorde, the people are his seruantes, and the king or governour is but Goddes minister or stuarde, ordained not to misuse the seruantes, that is, the people, neither to spoile them of that they haue, but to see the people doo their duetie to their Lorde God, that the goodes of this worlde be not abused, but spent to Goddes glorie, to the maintenaunce and defence of the common wealthe, and not to the destruction of it. The princes watche ought to defende the poore mannes house, his labour the subiectes ease, his diligence the subiectes pleasure, his trouble the subiectes quietnesse. And as the sunne neuer standeth still, but continually goeth about the worlde, doing his office, with his heate refreshing and comforting all naturall thinges in the worlde; so ought a good prince to be continually occupied in his ministerie, not seeking his owne profit, but the wealthe of those that be committed to his charge.”†

From the death of Chaucer, more than a century elapsed before another writer, deserving the name of a poet, appeared in England. This writer was Henry Howard, Earl of Surrey, son and heir apparent to the Duke of Norfolk, whom however he did not survive.

\* *Elyot's Boke named the Gouvernour*, f. 50. b. edit. Lond. 1565, 8vo.

† *Poynt's Shorte Treatise of Politike Power, and of the true Obedience which Subiectes owe to Kynges and other Civile Governours*, sig. F. 7. 1556, 8vo.

He was beheaded in 1547, in the thirtieth year of his age. Although thus cut off before the full maturity of intellectual vigour, he lived long enough to effect some very material improvements in English poetry. The versification of preceding poets was more properly rhythmical than metrical. Although some improvements had been introduced by Chaucer, he left the number of syllables too indefinite, and did not reach the harmony and compression of which this noble poet afterwards exhibited an example. The change, says Dr. Nott, which Surrey "proposed and effected, was this. He substituted for the old rhythmical mode of versification one as nearly metrical as the nature of any language, which regulates the value of syllables by accent and not by quantity, will allow. He limited the heroic verse to ten syllables, and these he divided into five equal iambic feet; for he perceived that the frequent return of the short syllable was necessary to correct that languor and ponderosity which the constant recurrence of monosyllables would otherwise occasion. He was aware, however, that the iambic measure, though sweet in itself, was liable to become monotonous and pall upon the ear. He therefore introduced the further refinement of breaking the lines with pauses. The natural place for the pause was at the end of the fourth syllable, where the old *cæsura* generally fell; but he varied the situation of his pauses as he found the harmony of the verse required, or as he thought the beauty and effect of the passage would be heightened by it. Such was the system of versification introduced by Surrey. Of the correctness of his taste, and the justness of his reasoning upon the subject, no further proof need be required than the event. For the laws of English versification, such as they were established by Surrey, have been adopted by our standard writers, with hardly any variation, ever since. At particular times, indeed, a particular taste has for a short season prevailed. Thus, in the reign of James, and of Charles the First, quaintness, and a love of antithesis, gave a new turn to our versification, and made it abrupt and irregular. But in the two best epochs of our poetry, during the reign of Elizabeth, and after the restoration, those principles of versification alone were observed which Surrey had introduced. An attentive reader will be surprised to find how little was added afterwards by even Dryden or Pope to the system and perfectness of Surrey's numbers."\* Another change introduced by this illustrious youth was the use of the heroic blank verse. Langland and other writers had indeed dispensed with rhyme; but, as we have already seen, their alliterative lines were constructed in a very different manner. In the following sonnet, he bewails the death of another eminent poet, Sir Thomas Wyatt:—

Divers thy death do diversely bemoan;  
 Some, that, in presence of thy livelied  
 Lurked, whose breasts envy with hate had swoln,  
 Yield Cæsar's tears upon Pompeius' head.  
 Some, that watched with the murd'rer's knife,  
 With eager thirst to drink thy guiltless blood,  
 Whose practice brake by happy end of life,  
 Weep envious tears to hear thy fame so good.

\* *Nott's Dissertation on the State of English Poetry before the Sixteenth Century* (p. clxxxi.), prefixed to the Works of Surrey and Wyatt. Lond. 1815, 2 vols. 4to.

But I, that knew what harboured in that head,  
 What virtues rare were tempered in that breast,  
 Honour the place that such a jewel bred,  
 And kiss the ground whereon thy corpse doth rest,  
 With vapour'd eyes; from whence such streams avail  
 As Pyramus did on Thisbe's breast bewail.

His sonnet on Spring may be quoted as another specimen of his language and versification :—

The soote season, that bud and bloom forth brings,  
 With green bath clad the hill, and eke the vale;  
 The nightingale with feathers new she sings,  
 The turtle to her mate hath told her tale.  
 Summer is come, for every spray now springs:  
 The hart hath hung his old head on the pale,  
 The buck in brake his winter coat he flings,  
 The fishes fete with new repaired scale,  
 The adder all her slough away she flings,  
 The swift swallow pursueth the flies smale,  
 The busy bee her honey now she mings;  
 Winter is worn that was the flowers' bale.  
 And thus I see among these pleasant things  
 Each care decays, and yet my sorrow springs.\*

Before the close of the sixteenth century, the English language had in a great measure attained that form and structure which it continues to exhibit. A great improvement of taste had been introduced, by a more critical and more general study of the ancient classics. William Lilly, the famous grammarian, who had learned Greek at Rhodes, and who had afterwards acquired a polished Latinity at Rome, became the first teacher of Greek at any public school in England: this was at St. Paul's school, in London, of which he was appointed the first master about the year 1500,† The language soon began to be more regularly taught in the universities. At Cambridge the study of it was zealously and successfully recommended by Smith, Cheke, and Ascham, who were themselves distinguished by their proficiency. The elegancies of Latin style began to be better understood, and monkish barbarism was gradually banished. Ascham and Haddon acquired distinction by the style of their Latin prose; and some of the verses of Leland discover a classical vein previously unknown to his countrymen. Before the close of the century, many of the Greek and Latin writers appeared in an English dress, and classical story and mythology were rendered familiar to the common reader. In addition to the French, the Italian and Spanish languages attracted a great degree of attention; and from all of these languages, especially the two former, many works were likewise translated. New sources of knowledge, as well as of fancy, were thus opened, and the English tongue was enriched with a more copious and variegated phraseology. Surrey and Wyatt were succeeded by poets of great genius, by Shakespeare and Spenser, as well as by many others, who, though of inferior powers, were yet possessed of a vigorous and brilliant imagination. The prose compositions of Bacon and Raleigh, partaking of the native energy of their authors, exhibited specimens of a condensed and forcible style, to which the preceding age had never attained.

\* *Surrey's Works*, p. 19. 46.

† *Warton's Hist. of English Poetry*, vol. iii. p. 258.

During the earlier part of the seventeenth century, ancient learning was assiduously cultivated; and men of great erudition, Usher, Selden, Gataker, Cudworth, and others, adorned the literary annals of their country. The prevailing taste of scholars had however a strong tendency to what was scholastic, if not pedantic; and even the poets, such as Donne and Cowley, substituted the subtilties of metaphysical conceits for flights of poetic fancy. Many words, derived immediately from the Latin, were introduced by the learned writers of the period to which we now refer. A considerable number of them have been subsequently rejected, while others are incorporated in the vocabulary. In the mean time, English poetry had nearly reached its highest limits. Milton's *Paradise Lost*, so eminently distinguished as a work of creative genius, affords the most remarkable illustration of the compass, power, and harmony of the language. Nor is Dryden unworthy of being mentioned with this mighty master of the English lyre. His powers of mind were no doubt different in kind and degree, but he was possessed of a genius truly poetical; and his prose, as well as his verse, exhibits a rich and copious vein of English phraseology.

The subsequent progress of the language our narrow limits will not permit us to trace. The history of the Scottish language is involved in more obscurity. The Celtic tongue is supposed to have been originally spoken in every district of that kingdom; nor has it been found an easy task to account for the introduction of a Gothic dialect, bearing a very close affinity to English. That the Scottish language is merely a dialect of the English, seems indeed to be the more prevalent opinion; and this foreign speech is supposed to have been gradually adopted by the Picts, who are at the same time described as a people of Celtic origin. The ancient history of every race of men which is possessed of no ancient records, and which has not attracted much attention from more enlightened nations, must ever be involved in doubt and uncertainty. In the present instance, we have little to guide our inquiries, besides a few scattered and contradictory notices, added to the ordinary and well-ascertained progress of human speech. When other records fail, the history of a nation may sometimes be traced in the history of its language; and a very moderate degree of reflection will enable us to determine the probability of a Celtic people unlearning their native tongue, and, from deliberate choice, adopting another speech completely and radically different.

Dr. Geddes, in a Dissertation on the Scoto-Saxon Dialect, has strenuously maintained this extraordinary opinion, which has likewise been adopted by a more recent writer, possessing no portion of his acuteness or learning. "The names," it is stated, "of all the rivers, mountains, towns, villages, and castles, of any note or antiquity, from Berwick-law to Buchanness, and from Buchanness to Arder-Sier, are all evidently Celtic. We must, then, either suppose that the language of the Picts was a dialect of the Celtic, or that they were not the original inhabitants of the country; or, in fine, that after the extinction of the Pictish empire, or rather its union with the Irish-Scots, the language of these latter universally prevailed, and effaced the very remembrance of its Gothic predecessor. The second of these suppositions is contrary to history; the third is belied by experience; the first then

is the only one that is founded in probability."\* This observation with respect to the prevalence of Celtic names, though too strongly stated, is not without foundation. We may therefore admit that the south of Scotland was, at some remote period, inhabited by a Celtic people; but it is not a necessary inference that this people must be identified with the Picts. Whatever hypothesis may be adopted, it is not denied that many Celtic names of places have been retained, where the inhabitants have long ceased to speak any dialect of the Celtic language. It may very easily be conjectured, that this primitive race of Celts was finally supplanted by new settlers, and that those settlers, whether Scandinavians or some other Gothic tribe, adopted many of the names which the original inhabitants had applied to mountains, rivers, and other conspicuous objects. That a similar process has been followed in innumerable instances, must be obvious to every person acquainted with the history of European settlements in other quarters of the globe: the native appellations are almost always retained to a certain extent, and are mingled with other names, borrowed from the language of the colonists.

If we should suppose the Picts to have been a Celtic people, a very hard problem will remain to be solved:—by what extraordinary means could a distinct race of men, placed in such circumstances, be induced to reject one language, and to adopt another? This radical and unprecedented change Dr. Geddes is disposed to ascribe to the operation of such causes as the following:—to the temporary subjection of the southern provinces of Scotland by the Northumbrians; to the immense number of captives seized during the ancient wars with the English; to the planting of English garrisons in several of the Scottish towns, to the amicable intercourse of the Picts with the English; and, finally, to the influence of Malcolm Canmore's courtiers, whom he supposes to have learned the English language from Queen Margaret and her retinue. But it may without much temerity be affirmed that, in the entire annals of the human race, such an effect was never produced by such causes. In a more refined state of society, the love of knowledge, the hope of gain, or the influence of fashion, may induce many individuals to betake themselves to the acquisition of foreign languages; but the great body of the people will ever be disposed to rest perfectly satisfied with the speech, whether rude or cultivated, which they have derived from their parents. It is only by some great revolution, by a total conquest, or by an overwhelming extent of colonization, that the current language of a country can be materially changed. After the Norman conquest, when French became the language of the court and of the law, and when Norman barons were planted in almost every corner of England, did the combined operations of such causes eradicate the old, and establish a new language in its place? Many new words were unquestionably introduced, but these were merely engrafted on the old stock of the Anglo-Saxon. "Had the Saxon," as Dr. Jamieson well observes, "found its way into Scotland in the manner supposed, it would necessarily have been superinduced on the Gaelic. This has always been the case where one language prevailed over another; unless the people who spoke the original language were

\* *Transactions of the Society of the Antiquaries of Scotland*, vol. i. p. 408.

either completely or nearly exterminated. Thus was the Norman gradually incorporated with the Saxon, as the Frankish had been with the Latinized Celtic of France. But the number of Gaelic words to be found in what is called broad Scots bears a very small proportion to the body of the language."\* And this solitary fact is indeed sufficient to evince that the inhabitants of the south of Scotland cannot be sprung from Celtic ancestors. Dr. Geddes has ventured to specify the reign of Malcolm III., which commenced in the year 1057, as the period of a general denization of the Saxon tongue in Scotland. "That monarch," he remarks, "had been bred in England, and married an English princess. Her retinue were all English. English, in consequence, would become the language of that court. The courtiers would carry it to their respective homes; their domestics would be ambitious to speak the language of their masters; and thus it would be gradually introduced into every fashionable circle."† But to introduce a language into every fashionable circle, is somewhat different from rendering it the current speech of the people: French was long the court language, and the language of fashionable circles in England, and yet the great body of the people persisted in speaking English.

The insuperable difficulty of accounting for such a transition as has thus been supposed, a transition from a Celtic to a Gothic dialect, renders the conclusion obvious and unavoidable, that the Gothic speech of Scotland was derived from a Gothic race of ancestors. Nor is this conclusion altogether free from difficulties, though they are of very inferior weight to those which are to be deposited in the opposite scale. It is the opinion of a late writer, who has investigated the subject with much ability, that the Picts emigrated from Scandinavia;‡ and, according to this opinion, the Picts and Saxons must have spoken two dialects of the same original tongue. The history of these kindred dialects may be illustrated from that of some others, derived from the same Gothic origin. The Icelandic, Swedish, and Danish languages are all descended from the ancient Scandinavian. Iceland, which, as the learned Bishop Müller has remarked, is entitled to particular attention as the foster-mother of northern history,§ was peopled by a colony of

\* *Jamieson's Dissertation on the Origin of the Scottish Language* (p. 21), prefixed to his Dictionary.

† Verstegan reasons in nearly the same manner. (*Restitution of decayed Intelligence*, p. 180. Antwerp, 1605, 4to.) See likewise the preface to Dr. Wallis's *Grammatica Linguae Anglicanae*, p. xxii., and Mr. Boucher's Introduction to his Glossary, p. li.

‡ *Pinkerton's Enquiry into the History of Scotland*, vol. i. p. 168. Lond. 1789. 2 vols. 8vo. Mr. Roberts inclines to the same opinion: "The Picts, or, more properly, Phichits, probably a colony of Scandinavians, originally from Scythia, as they are said to have come over the Northern Sea. Triad, 7." (*Sketch of the early History of the Cymry, or Ancient Britons*, p. 125. Lond. 1803, 8vo.) Professor Magnusen, who has more recently investigated the origin of the Picts, bestows sufficient commendation on Mr. Pinkerton's learning and research, and to a certain extent is disposed to adopt his leading opinion; but at the same time he declares himself unable to approve of all the arguments by which it is supported, especially of those which rest upon erroneous interpretations of Scandinavian words and antiquities; nor does he fail to express his disapprobation of this writer's unseasonable invectives against the Celts. (*Om Picternes og deres Navns Oprindelse*, S. 56. Kiöbenhavn, 1817, 8vo.)

§ *Müller's Sagabibliothek*, Bd. i. S. 4. Kiöbenhavn, 1817-20, 3 Bind. 8vo.

Norwegians, in the year 874. This race of men, confined to a remote island, and maintaining but little intercourse, either of peace or war, with other nations, has preserved its ancient language with singular purity.\* The Swedes and Danes, more extensively engaged in the pursuits of commerce, and more closely connected with the rest of mankind, have exhibited a different progress: but, while both languages have receded very widely from the Icelandic, they have not receded very widely from each other; a similar state of society, similar relations with other countries, and the study of the same foreign authors, have produced corresponding changes in both. In the history of these two languages, we do not indeed find a complete parallel with that of the Scottish and English: the Swedish and Danish are both dialects of the ancient Scandinavian; while the Scottish is derived from the Scandinavian, and the English from the ancient German. But the Scandinavian and the German proceeded from the same common stock; and when we ascend to a period sufficiently remote, they are only to be regarded as dialects of the same language.

It is not to be concealed that Barbour, Winton, Henry the Minstrel, and other early poets of Scotland, have described their native language as English.† This application of the name has been explained, with at least some degree of plausibility, by referring to the circumstance of the Gaelic being then denominated the Scottish language.‡ A Celtic and a Gothic dialect could not well be described by the same term; and “when, by a necessary contingency, the Gothic language had in the same space, though in different nations, retained much the same hues, the name of that dialect which was spoken by the greater and politer people was imparted to the other, inhabiting a contiguous part of the very same island.”§ Mr. Pinkerton is less fortunate in another suggestion; namely, that it is not more strange to perceive that the Italian, French, and Spanish languages were originally termed Romance. They were all described by this common name, because they were all derived from one common source, the language of the Romans; but we are not inclined to believe that the Scottish and English tongues stand in precisely the same relation to each other.

One of the most ancient specimens of the Scottish language is a poem of eight lines, composed on the death of Alexander III., who perished by an accidental death in the year 1286. That these lines were written soon after the event to which they refer is affirmed by Winton, in whose chronicle they are preserved:—

\* Dr Sharpe has well stated, that “war, invasion, conquest, treaties, intercourse with different nations, commerce, colonies, rise of arts, logical refinements, controversies, time or age, and the humours of a people, are all causes of alteration in language.” (*Two Dissertations upon the Origin of Languages, and upon the original Powers of Letters*, p. 35. edit. Lond. 1751, 8vo.)

‡ “Duobus enim utuntur linguis, Scotica videlicet, et Teutonica; cujus linguæ gens maritimas possidet et planas regiones: linguæ vero gens Scotticæ montanas inhabitat, et insulas ultiores.” (*Forduni Scotichronicon*, vol. i. p. 44. edit. Goodall.)

§ *Pinkerton's Essay on the Origin of Scottish Poetry* (p. lxxi), prefixed to *Ancient Scottish Poems*. Lond. 1786, 2 vols. 8vo.

Quhen Alysandyr oure kyng was dede,  
 That Scotland led in luwe and le,  
 Away wes sons of ale and brede,  
 Of wyne and wax, of gamyn and gle:  
 Our gold wes changyd in-to lede.  
 Cryst, born in-to virgynyte,  
 Succour Scotland and remede,  
 That stad is in perplexyte.\*

John Barbour, Archdeacon of Aberdeen, died in the year 1396, and was therefore contemporary with Chaucer. His poem on the exploits of King Robert furnishes an excellent specimen of the language: it is highly interesting as a relique of early literature, nor is it without its value as a record of early history. This venerable poet's encomium on political freedom is distinguished by a manly and dignified strain of sentiment:—

A ! fredome is a noble thing !  
 Fredome mayss man to haiff liking,  
 Fredome all solace to man giffis;  
 He levys at ess that frely levys.  
 A noble hart may haiff nane ess,  
 Na ellys nocht that may him pless,  
 Gyff fredome faillyhe; for fre liking  
 Is yharnt our all othir thing.  
 Na he that ay hass levyt fre,  
 May nocht knaw weill the propyrte,  
 The angyr, na the wrechyt dome,  
 That is cowplyt to foule thryldome.  
 Bot gyff he had assayit it,  
 Than all perquer he suld it wyt,  
 And suld think fredome mar to prys  
 Than all the gold in warld that is.†

James I., one of the most remarkable persons of the age in which he lived, was born in 1394, and was assassinated in 1437. Many of his poems are probably lost, or are no longer recognized as his; but those which still remain are sufficient to secure for the author a high rank among the British poets of that age. The uncommon versatility of his talents enabled him to excel alike in serious and in ludicrous composition: he evinces a warm imagination and a feeling heart, and he has left some exquisite specimens of humour. The subsequent extract is from his longest poem, which bears the title of "The King's Quair:"—

Quhare in a lusty plane tuke I my way,  
 Endlang a ryuer, plesant to behold,  
 Enbroudin all with fresche flouris gay,  
 Quhare throw the granel, brycht as ony gold,  
 The cristal water ran so clere and cold,  
 That in myn ere maid contynualy  
 A maner soun mellit with armony:  
 That full of lytill fischis by the brym,  
 Now here now there, with bakkis blewe as lede,  
 Lap and playit, and in a rout can swym  
 So prattily, and dressit thame to sprede  
 Thaire curall fynis, as the ruby rede,  
 That in the sonne on thaire scalis brycht  
 As gesserant ay glitterit in my sight.

\* *Winton's Cronykil of Scotland*, vol. i. p. 401.

† *Barbour's Bruce*, p. 10. Jamieson's edit.

And by this ilke ryner syde alawe  
 Ane hyeway fand I like to bene,  
 On quhich on euery syde a long rawe  
 Off trees saw I full of levis grene,  
 That full of fruyte delitable were to sene;  
 And also, as it comes vnto my mynd,  
 Of bestes sawe I mony diuerse kynd.\*

We have only room for another specimen of the early Scottish language; and this we shall select from a work of William Dunbar, the most eminent of all the early Scottish poets. He was a native of Lothian, and is supposed to have died about the year 1520. His poems are numerous and miscellaneous, but none of them extends to any considerable length. He evidently unites a brilliant imagination with an elegant taste; nor is he less conspicuous for his skill in the mechanical part of poetry. The elasticity of his mind, and the versatility of his talents, enabled him to arrive at eminence in different departments of composition. His allegorical poems display a rich and fertile invention; and he is equally distinguished for his powers of description and satirical humour. His diction is often remarkable for its terseness and forcible simplicity; but it is not always free from the vicious and pedantic phraseology with which the English poetry of that period is so deeply infected. "It is evident," says Dr. Drake, "that a union of talents of this wide range must necessarily be of rare occurrence; nor can we wonder that a century should elapse before a poet in any high degree approaching the genius of Chaucer made his appearance in our island. Not indeed until Dunbar arose in the sister kingdom, had we another instance of the combination of first-rate abilities for humour and comic painting, with an equally powerful command over the higher regions of fiction and imagination."† *The Thistle and the Rose*, a poem in celebration of the nuptials of James IV. and Margaret Tudor, opens with the following stanzas:—

Quhen Merche wes with variand windis past,  
 And Appryll had with hir silver shouris  
 Tane leif at nature with ane orient blast,  
 And lusty May, that muddir is of flouris,  
 Had maid the birdis to begyn thair houris  
 Among the tendir odouris reid and quhyt,  
 Quhois harmony to heir it wes delyt;

In bed at morrow sleiping as I lay,  
 Methocht Aurora with her cristall ene  
 In at the window lukit by the day,  
 And halsit me with visage paille and grene;  
 On quhois hand a lark sang fro the splene,  
 Awalk, luvaris, out of your slemering,  
 Se how the lusty morrow dois upspring.

Methocht fresche May befor my bed upstude,  
 In weid depaynt of mony diverse hew,  
 Sober, benyng, and full of mansuetude,  
 In bright attair of flouris forgit new,  
 Hevinly of color, quhyt, reid, brown, and blew,  
 Balmit in dew, and gilt with Phebus bemys,  
 Quhyl all the house illumynit of her lemys.

Slugart, scho said, awalk annone for schame,  
 And in my honor sumthing thow go wryt:  
 The lark hes done the mirry day proclame,  
 To rais up luvaris with comfort and delyt,  
 Yet nocht increas thy curage to indyt,  
 Qubois hairt sumtyme hes glaid and blissful bene,  
 Sangis to mak undir the levis grene. \*

The Celtic language still prevails in some extensive districts of the United Kingdom. One of its most cultivated dialects is the Welsh, which comprises some very ancient and curious reliques of literature.† It is frequently mentioned as a remarkable fact in the history of the affinity of nations and languages, that the Welsh soldiers who served at the siege of Belleisle in the war of 1756, found little difficulty in making their speech intelligible to the people of Bretagne. A dialect of the Celtic tongue continues to be spoken in the Isle of Man, and is known by the name of the Manks language. Another dialect of it was long current in Cornwall. "This language," says Mr. Boucher, "was the current speech of Cornwall till the reign of Henry VIII.: but then innovations took place, and fashionable preachers began to affect to perform the service of the church in English, and, at the Reformation, are said to have very generally expressed their preference of the English service. However, some old-fashioned folks still clung to their paternal tongue with patriotic pertinacity; and the last sermon ever delivered in Cornish was in 1678. Mr. Ray, in 1662, says he could find only one person who could write it; and, in 1768, Mr. Barrington could find only one old woman who could scold in it."‡ In Scotland, a dialect of Celtic is spoken by a race of men who inhabit no small proportion of the territory, but whose number probably does not exceed one-sixth of the general population. Nor is the Gaelic commonly spoken in every part of the Highlands. Even in Caithness, the most northern county of Britain, it is not the current speech. The inhabitants, like those of Orkney and Zetland, are chiefly descended from the Norwegians, and speak a dialect of Scottish. The Scottish Celts are descendants of the Irish, and speak a dialect which still continues to be so similar to theirs, that the people of the two countries can, to a great extent, make themselves intelligible to each other. In the Irish tongue many manuscripts have been preserved, some of which are of an early date; but in the Gaelic there is none that can plausibly pretend to any considerable antiquity.

\* Abundant Home Supply.

† If we strike the famine year of 1847 out of the Decennial Average from 1841 to 1850, the fluctuation from the lowest to the highest price of English Wheat will be only 101 per cent. instead of 271 per cent.

1804. Corn Law passed, admitting Foreign Grain at 6/ per Quarter, when English Wheat was 66/ or upwards per Quarter.
1806. Free Import of Agricultural Produce from Ireland, which had previously been treated as a Colony.
1808. Exports of Wheat exceeded Imports in consequence of the Supplies sent to our Armies in Spain and Portugal.
1810. Large Importations of Grain from France, with which we were then at deadly strife.
1815. Corn Law passed prohibiting Importation of Foreign Corn until English Wheat was 80/ or upwards per Quarter. Colonial admitted when the averages reached 67/.
1822. Abundant Wheat Harvest. Highest Price of any one Week in the Year 50/7. Agricultural Distress. Corn Law Amendment Act passed, admitting Foreign Wheat at 12/ per Quarter, when the price was 70/; at 1/ Duty when it was 80/ or upwards.
1825. American Colonial Wheat admitted at a permanent Duty of 5/ per Quarter.
1826. Order in Council admitting Foreign Grain at a Nominal Duty till forty days after the Meeting of Parliament.
1828. Corn Law Amendment Act (9 Geo. IV., cap. 60). Sliding Scale of Duties reduced. Foreign Wheat admitted at 1/ per Quarter Duty when the price was 73/ and upwards.
1842. Corn Law Amendment Act (5 Vict. cap. 14) reduced Sliding Scale of Duties, with rests.
1846. Repeal of the Corn Laws.
1847. Omitting the Famine Year of 1847, the fluctuation from the lowest to the highest price between 1841 and 1850 will be only 101 per cent.

## DECENNIAL AVERAGE PROPORTION OF OFFICIAL TO DECLARED VALUE OF EXPORTS.

| Years.  | Official Value. | Declared Value. |
|---------|-----------------|-----------------|
| 1801-10 | 100             | 147.44          |
| 1811-20 | 100             | 116.77          |
| 1821-30 | 100             | 74.08           |
| 1831-40 | 100             | 56.66           |
| 1841-50 | 100             | 43.63           |

Note.—The Official Value being fixed in 1864 and unvarying, is a fair Index of Quantity. By the annexed comparative table it would appear that between 1801 and 1852, our annual Exports increased eightfold in quantity, but only twofold in price.

\* Records burned.

- 1815 Exports to the United States, North America, £13,473,092, much above the average, in consequence of the close of the War of 1812-14.  
 1821 Exports to the United States, £6,331,881.  
 1825 The Irish Trade placed under the regulations of the Coasting Trade.  
 1831 Exports to the United States, £9,063,532.  
 1836 Exports to the United States, £12,425,605.  
 1842 Exports to the United States, £3,528,807, or £8,896,798 less than in 1836, owing to financial embarrassments of the United States.  
 1849 Exports to the United States, £11,971,028.

## 1850 DISTRIBUTION OF EXPORTS AT REAL OR DECLARED VALUE TO DIFFERENT PARTS OF THE WORLD.

\* The diminution in 1827 is apparent only, and is caused by the operation of the New Registry Act of 1826, which cleared the registry of Ships lost, sold, or worn out, which were previously continued on the List.

† Exclusive of Steamers employed solely in River Traffic, which require no Register.

1837 Steam Voyages of the Great Western, Sirius, and Royal William across the Atlantic.
